

# AC Current Probe Model 810A

The Model JM810A is a high performance AC current probe for higher currents. Excellent transformation and low phase shift, plus a broad frequency response, permit accurate measurements of current and power. The high quality magnetic core and uniform windings provide for accurate measurements up to 2400Aac. The "squared" jaw permits multiple conductor or bus bar positioning. The Model JM810A provides excellent True RMS capabilities and reliable signal reproduction.

The Model JM810A works as a traditional current transformer providing current outputs (mA) over a broad range of transformation ratios. The Model JM810A is designed for use on DMMs, power and harmonic meters, recorders or instruments with AC current ranges.

## Features

- Nominal range: 1 to 2000Aac (continuous cycle for the full temperature range)
- Transformation ratio: 2000:2
- Output: 1mA/A
- Designed for use on DMMs, power and harmonic meters, recorders or instruments with AC current ranges

## Applications

- Field testing
- Electrical utility
- HVAC
- Industrial maintenance
- Laboratory
- Plant maintenance
