

# AirLink 6900 Operator's Manual

Part Number: 71-0534

Revision: P4

Released: 5/7/21

RKI Instruments, Inc. www.rkiinstruments.com

# **WARNING**

Read and understand this instruction manual before operating detector. Improper use of the detector could result in bodily harm or death.

Periodic calibration and maintenance of the detector is essential for proper operation and correct readings. Please calibrate and maintain this detector regularly! Frequency of calibration depends upon the type of use you have and the sensor types. Typical calibration frequencies for most applications are between 1 and 3 months, but can be required more often or less often based on your usage.

## **Product Warranty**

RKI Instruments, Inc. warrants gas alarm equipment sold by us to be free from defects in materials, workmanship, and performance for a period of one year from date of shipment from RKI Instruments, Inc. Any parts found defective within that period will be repaired or replaced, at our option, free of charge. This warranty does not apply to those items which by their nature are subject to deterioration or consumption in normal service, and which must be cleaned, repaired, or replaced on a routine basis. Examples of such items are:

a) Absorbent cartridges

d) Batteries

b) Pump diaphragms and valves

e) Filter elements

c) Fuses

Warranty is voided by abuse including mechanical damage, alteration, rough handling, or repair procedures not in accordance with the operator's manual. This warranty indicates the full extent of our liability, and we are not responsible for removal or replacement costs, local repair costs, transportation costs, or contingent expenses incurred without our prior approval.

THIS WARRANTY IS EXPRESSLY IN LIEU OF ANY AND ALL OTHER WARRANTIES AND REPRESENTATIONS, EXPRESSED OR IMPLIED, AND ALL OTHER OBLIGATIONS OR LIABILITIES ON THE PART OF RKI INSTRUMENTS, INC. INCLUDING BUT NOT LIMITED TO, THE WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT SHALL RKI INSTRUMENTS, INC. BE LIABLE FOR INDIRECT, INCIDENTAL, OR CONSEQUENTIAL LOSS OR DAMAGE OF ANY KIND CONNECTED WITH THE USE OF ITS PRODUCTS OR FAILURE OF ITS PRODUCTS TO FUNCTION OR OPERATE PROPERLY.

This warranty covers instruments and parts sold to users by authorized distributors, dealers, and representatives as appointed by RKI Instruments, Inc.

We do not assume indemnification for any accident or damage caused by the operation of this gas monitor, and our warranty is limited to the replacement of parts or our complete goods.

### **Caution Statements**

WARNING - EXPLOSION HAZARD - SUBSTITUTION OF COMPONENTS MAY IMPAIR SUITABILITY FOR CLASS I, DIVISION 1, or equivalent as stated in user manual.

AVERTISSEMENT - RISQUE D'EXPLOSION-LA SUBSTITUTION DE COMPOSANTS PEUT RENDURE CE MATERIEL INACCEPTABLE POUR LES EMPLACEMENTS DE CLASSE I, DIVISION I.

Caution: For safety reasons, this equipment must be operated and serviced by qualified personnel only. Read and understand the instruction manual completely before operating or servicing.

ATTENTION: POUR DES RAISONS DE SECURITE, CET ÉQUIPEMENT DOIT ETRE UTILISE ENTRETENU ET REPARER UNIQUEMENT PAR UN PERSONNEL QUALIFIE. ETUDIER LE MANUEL D' INSTRUCTIONS EN ENTIER AVANT D' UTILISER, D' ENTERETENIR OU DE RÉPARER L' ÉQUIPEMENT.

CAUTION: THIS AREA MUST BE FREE OF FLAMMABLE GASES DURING CALIBRATION.

ATTENTION: CETTE ZONE DOIT ETRE EXEMPTE DE GAZ INFLAMMABLES PENDANT L'ETALONNAGE.

CAUTION: TO PREVENT IGNITION OF EXPLOSIVE ATMOSPHERES, remove from explosive atmosphere BEFORE SERVICING.

Warning: A conduit seal must be used within 18 inches of the enclosure wall to comply with the hazardous location rating of this product.

# **Danger Statements**

DANGER: The RKI Instruments Inc. AirLink 6900 is an ambient air Hazardous gas sensor assembly and only monitors in the immediate vicinity of the sensor housing. A site survey is required in order to determine the best placement and quantity of sensor assemblies. Improper installation can lead to an undetectable gas leak which could result in personal injury or loss of life.

#### **Overview**

The RKI Instruments, Inc. AirLink 6900 explosion-proof ambient air hazardous gas detector is designed to detect a wide range of toxic gases in potentially hazardous environments. This product is CSA certified as Class I, Division 1, Groups B, C, and D and rated for Zone 1, Group IIB. The AirLink 6900 features non-intrusive magnetic switches that allow for complete system configuration, regular calibration, and product maintenance to be performed in the field, without opening the enclosure and breaking the seal of the enclosure, thereby compromising the explosion-proof rating of the device. Non-intrusive interface with the AirLink 6900 is made possible by use of the magnetic tool included in the purchase of the device.

In this manual, the instructions reference the use of push-buttons, located on the front panel of the device. In certain environments, the activation of the non-intrusive magnetic switches, through the use of the magnetic tool, will replace the directive of the button-press actions. To apply the magnetic tool, hold the tool to the side of the device enclosure adjacent to the push-button that you wish to activate. When the magnetic switch is toggled, an on-screen indicator will appear on the display screen, signifying that a connection was made.

The AirLink 6900 display screen will always show the present concentration of gas being detected by the sensor assembly.

This document is an operation manual containing diagrams and step-by-step instructions for the proper and safe installation, start-up, configuration, normal operation, and product maintenance of the AirLink 6900.

**NOTE:** This document should be read in its entirety before the initial operation of the product.

# **Specifications**

Table 1 lists specifications for the AirLink 6900.

Dimensions	5.5" D x 6" W x 17" H
Weight	6 lbs.

WARNING: When using the AirLink 6900, you must follow the instructions and warnings in this manual to assure proper and safe operation of the AirLink 6900 and to minimize the risk of personal injury. Be sure to maintain and periodically calibrate the AirLink 6900 as described in this manual.

#### **Remote-Mounted Kit**

A remote-mounted sensor kit can be ordered if the sensor needs to be somewhere that is not conveniently accessible for viewing the display screen.

The kit includes a second junction box on a cable with a cable bushing/cable gland. The cable can be ordered in 1-foot increments with maximum cable lengths listed below.

Sensor Type	Max Cable Length
Electrochemical (EC)	250 feet
Infrared (IR)	40 feet
PID	35 feet
Catalytic	15 feet

The cable and cable bushing/cable gland are <u>not</u> explosion-proof. If the assembly is installed in a classified location, the cable bushing must be removed and replaced with explosion-proof conduit. You must meet local electrical codes and use appropriate construction technique to maintain the explosion-proof classification of the assembly.

#### Installation

This section describes procedures to mount the AirLink 6900 in the monitoring environment and wire the AirLink 6900.

## Mounting the AirLink 6900

- 1. Consider the following when you select the mounting site.
  - The unit should be placed greater than 6.5 feet/2 meters away from a monitor in order to ensure reliable communications.
  - Select a site where the AirLink 6900 is not likely to be bumped or disturbed. Make sure there is sufficient room to perform start-up, maintenance, and calibration procedures.
  - Select a site that is representative of the monitoring environment and where the target gas is likely to accumulate or where it is most likely to leak. The AirLink 6900 should not be installed near an entrance, air intake, or exhaust point.
  - When monitoring "light" hydrocarbons, such as methane, the unit should be placed near the ceiling or ceiling corner.
  - When monitoring "heavy" hydrocarbons, such as gasoline, the unit should be placed approximately 2 to 3 inches from the floor.
  - The sensor must point down.

• Avoid installing the AirLink 6900 in a location where airborne particles could cover or coat the sensor.

NOTE: These guidelines are ONLY intended as a general directive for the placement of the AirLink 6900. This information should NOT serve as a complete list when considering all potential parameters for the proper location of the unit. It is STRONGLY advised that a third party Certified Industrial Hygienist, or other Certified Safety Professional, conduct a site survey and annotate the location and quantity of detection devices that should be installed for EVERY installation of EVERY site.

2. Select a mounting location and installation hardware. Mounting to a concrete or steel structure is recommended to minimize vibration and moisture. Use a maximum 1/4"-20 bolt or 1/4" diameter screw, flat washers, Grade 5 material, and corrosion protection like paint, galvanization, or zinc plating.

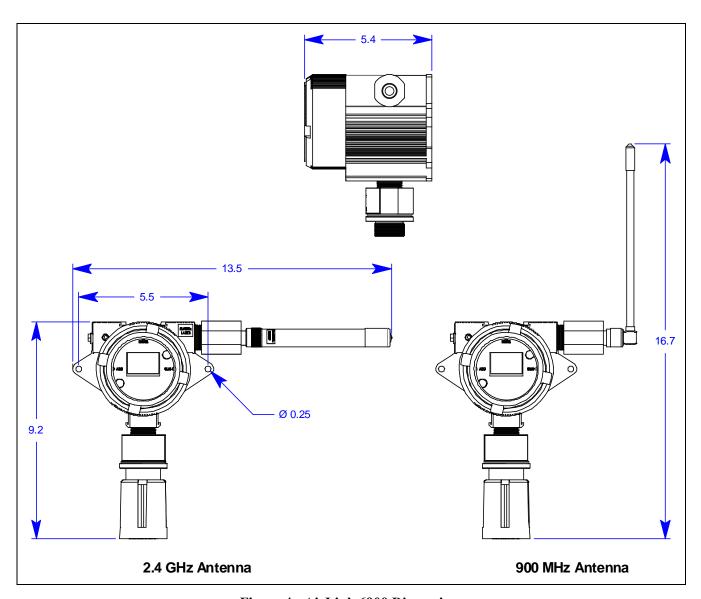

Figure 4: AirLink 6900 Dimensions

3. For a remote-mounted kit, install the detector junction box at the monitoring environment using techniques appropriate for the mounting area's classification and for the local electrical code. The cable and cable bushing/cable gland sent with the assembly are not explosion-proof.

WARNING: If installed in a classified area, use appropriate construction technique to maintain the explosion proof classification of the assembly.

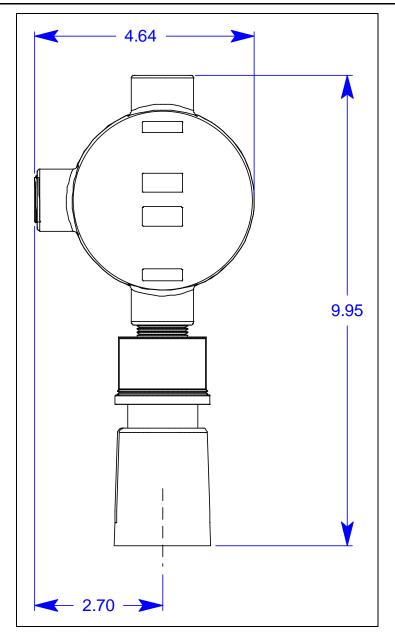

Figure 5: Remote-Mounted Kit's Detector Junction Box Dimensions

### **Remote-Mounted Kit Wiring**

The remote-mounted kit generally comes prewired but if it becomes disconnected, follow these steps to reconnect it.

**CAUTION:** The internal components can be static sensitive. Use caution when opening the enclosure and handling internal components.

*CAUTION:* Make sure the power source is off before beginning the wiring procedure.

**CAUTION: DO NOT** use any metal objects or tools to remove the terminal board from the internal system.

- 1. Unscrew each enclosure lid and set it aside.
- 2. At the amplifier junction box, grab the thumbscrews and gently lift the internal system out of the enclosure. It can rest on the edge of the enclosure.
- 3. One end of the cable has a connector and the other has ferruled wires.
- 4. Feed the connector end of the cable through a conduit hub at the amplifier junction box.

# WARNING: If installed in a classified area, use appropriate construction technique to maintain the explosion proof classification of the assembly.

- 5. Plug the connector into the sensor connector socket at the amplifier junction box.
- 6. Feed the ferruled-wire end of the cable through a conduit hub at the detector junction box.

# WARNING: If installed in a classified area, use appropriate construction technique to maintain the explosion proof classification of the assembly.

- 7. Connect the ferruled wires to the color-coded terminals in the detector junction box.
- 8. Secure the detector junction box's enclosure lid back onto the enclosure.

### **Connecting the Batteries**

The AirLink 6900 is powered by dual 3.6V/19AH lithium-thionyl batteries. The batteries are shipped installed but with the wiring disconnected. The batteries should be replaced in pairs. Do not mix old and new batteries.

**CAUTION:** The internal components can be static sensitive. Use caution when opening the enclosure and handling internal components.

**CAUTION: DO NOT** use any metal objects or tools to remove the terminal board from the internal system.

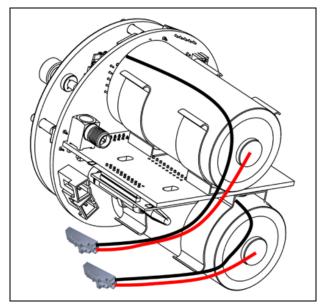

*CAUTION:* Use only RKI-supplied batteries.

- 1. Unscrew the enclosure lid and set it aside.
- 2. Grab the thumbscrews and gently lift the internal system out of the enclosure. It can rest on the edge of the enclosure.

**NOTE:** Disconnecting the sensor connector plug from the sensor housing connector and the antenna fitting will allow for the complete removal of the internal system from the device enclosure. Disconnecting the internal system may provide ease in accessing the control board terminals for wiring. Reconnect the sensor connector plug before reinstalling the internal system.

3. Insert the bottom battery cable's 2-pin connector plug into the bottom 2-pin connector socket on the board.

4. Insert the top battery cable's 2-pin connector plug into the top 2-pin connector socket on the board.

**Figure 6: Battery Connection** 

### Closing the Enclosure

- 1. Place the internal system back into the enclosure, matching each mounting post to its corresponding eyelet anchored within the base of the enclosure.
- 2. Using the thumbscrews, gently push to seat the internal system into the mounting posts.

**NOTE:** The thumbscrews on the AirLink 6900 function **ONLY** as thumb-holds for ease in removal of the internal system from the base of the enclosure. Do **NOT** attempt to loosen or tighten the thumbscrews when opening or closing the enclosure.

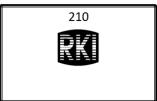

- 3. Verify that the sealing ring, seated at the threaded opening of the device enclosure, is correctly in place.
- 4. Secure the enclosure lid back onto the enclosure.

WARNING: When securing the lid onto the device, tighten the enclosure lid by hand ONLY. Overtightening of the lid by use of hand-tools could result in damage to the O-ring, potentially compromising the moisture seal, resulting in an unsafe environment.

## **Start Up**

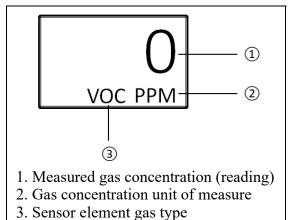

This section describes procedures to start up the AirLink 6900 and place the AirLink 6900 into normal operation.

- 1. Complete the installation procedures described earlier in this manual.
- 2. Verify that the battery connection is correct and secure.
- 3. Verify that the controller is on and operating properly. Refer to the controller operator's manual.
- 4. Press the ADD button to turn the AirLink 6900 on. The unit enters a 1-minute startup period (3.5 minutes for LEL versions).

175 Radio: Data Net Id: 5 Addr: 1 Freq: 900 105
AirLink 6900
01/18/2017
Serial#: C12345
Ver: 5.2
Build 0

5. At the end of the startup, the AirLink 6900 is in Normal Operating Mode.

6. Allow the detector to warmup for the appropriate amount of time as shown below, depending on the sensor type.

Detection Gas	Warmup Time After an <u>Extended</u> Time Off Power	Warmup Time After a <u>Short</u> Time Off Power
Ammonia	12 hours	4 hours
Carbon Dioxide	10 minutes	10 minutes
Carbon Monoxide	2 hours	
Chlorine		
Chlorine Dioxide		
Combustible Gas	10 minutes	
Ethylene Oxide	48 hours	
Hydrogen Chloride	12 hours	
Hydrogen Cyanide		
Hydrogen Fluoride	2 hours	
Hydrogen Sulfide		
Nitric Oxide	12 hours	
Nitrogen Dioxide	2 hours	
Oxygen		
Ozone		
Phosphine		
Sulfur Dioxide		
VOCs	10 minutes	

7. The AirLink 6900 is factory-calibrated before shipping from RKI. If a full calibration is desired at startup, see page 35.

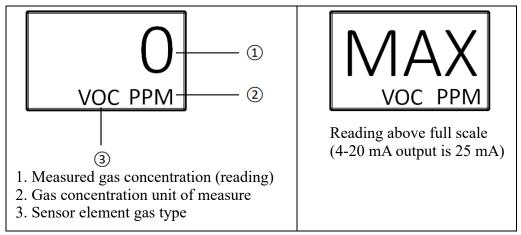

**NOTE:** The user interface will be slow to respond until the AirLink 6900 establishes a connection with a controller.

## **Operation**

WARNING: Do not remove the sensor housing cap or enclosure lid while the circuits are energized unless the area is determined to be non-hazardous. Keep the sensor housing cap and enclosure lid tightly closed during operation.

## **Normal Operating Mode**

While in Normal Operating Mode, the AirLink 6900 continuously samples the air and updates the measured concentration of the target gas on the display screen. The display, when in Normal Operating Mode, appears as shown below.

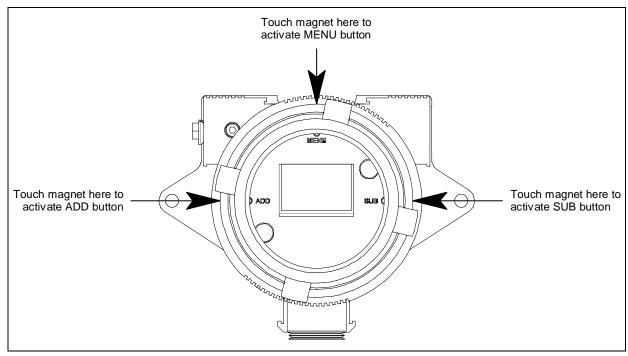

The gas reading is sent back to the controller in 1-minute intervals when the reading is below the background setting (page 30). When the reading surpasses the background setting, the reading is sent back to the controller in 5-second intervals.

**NOTE:** The user interface will be slow to respond until the AirLink 6900 establishes a connection with a controller.

## **Magnetic Buttons**

Use the provided magnet to actuate the AirLink 6900's buttons without having to remove the junction box's lid. Touch the magnet to the outer edge of the junction box lid near the button you want to actuate. Tapping the junction box is the same and pressing and releasing the button. Holding the magnet against the junction box is the same as pressing and holding the button.

## **Powering the Device**

When the AirLink 6900's batteries are first plugged in, the unit does not automatically power on. The directions below describe how to power on and power off the AirLink 6900 once power has been applied.

#### **Powering On**

Powering on the device begins the operation of the unit, automatically initiating the system start-up cycle and 1-minute warmup period (3.5 minutes for LEL versions). The AirLink 6900 will be in Normal Operating Mode at the completion of the system start-up.

1. Press the ADD button once to turn the unit on.

#### **Powering Off**

Powering off the device stops the operation of the unit. The Product Settings and Configuration, as well as the operation settings, including the zero and calibration of the sensor, will be unaffected.

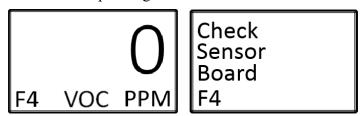

1. Press and hold the SUB button for approximately 6 seconds, until "OFF" shows on the display screen.

2. The display screen will continue to show "OFF" for the duration of time that the unit is powered off, as long as uninterrupted power is supplied to the unit.

#### **Faults**

In the event of a device failure, the unit will alternate between the normal operating screen and a fault screen on the display, in 5 second intervals, until the fault has been cleared, or is corrected. The fault code, located in the bottom-left corner of the display, appears on both screens. The unit continuously registers that the system is in fault. When the fault is corrected, the unit will return to Normal Operating Mode.

For a list of the fault codes and warning symbols of the AirLink 6900, and their associated meaning, see page 43.

## **Accessing Menus**

Both system menus are accessible from Normal Operating Mode. To access the Product Settings and Configuration menu, **press and hold** the **MENU** button, for approximately 6 seconds, until the menu is activated and open on the display screen. To access the Operation Settings menu from Normal Operating Mode, press and release the **MENU** button once and the menu will open and show on the display.

**NOTE:** After 5 minutes of no interaction with the device, the unit will automatically return to Normal Operating Mode.

# **Product Settings and Configuration**

The Product Settings and Configuration menu allows the end-user to tailor the device settings to meet their required specifications and/or site conditions.

The AirLink 6900 continues monitoring for gas while in the Product Settings and Configuration menu.

The Product Settings and Configuration menu consist of the following screens:

- Alarm Test (see page 26)
- Network ID (see page 27)
- System Information (see page 28)
- Zero/Calibration Timers (see page 28)
- Unit Info (see page 29)
- Background Setting (see page 30)
- Calibration Method (see page 31)
- Display Screen Contrast Setting (see page 32)
- Return to Factory Default Settings (see page 32)
- Reset Zero and Calibration Values Only (see page 34)

## **Entering the Product Settings and Configuration Menu**

While the device is in Normal Operating Mode, **press and hold** the **MENU** button, for approximately 6 seconds, until the Product Settings and Configuration menu is activated and open on the display screen.

**NOTE:** After 5 minutes of no interaction with the device, the unit will automatically return to Normal Operating Mode.

#### **Alarm Test**

The alarm test simulates a gas level reading. The alarm test is used to ensure the proper functionality of the relay settings on the controller. The test can also be used to simulate emergency/safety drills onsite.

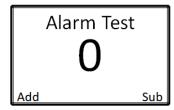

**NOTE:** Triggering AirLink 6900 relays will also simulate Alarm 1 and Alarm 2 relays at the controller. Controllers cannot distinguish between real and simulated data received. When the controller relays are triggered, alarm devices will perform as intended, initiating emergency procedures as if a harmful or toxic gas was actually present. To prevent this from occurring, set the controller to calibration mode before performing the alarm test. Calibration mode allows data transmission without relay activation.

It is recommended that an alarm test be conducted EVERY 30 days, alongside the maintenance and calibration of the detector.

### **Performing the Alarm Test**

The alarm test gas level reading can be increased or decreased in increments of 5% of the sensor scale, up to 100% of the sensor scale.

1. Enter the Product Settings and Configuration menu by pressing and holding the MENU button for 6 seconds. The alarm test screen appears.

- 2. Press the ADD button until the Alarm 1 and Alarm 2 levels are reached and the relay(s) are triggered to light all visual alarm(s) and sound all audio alarm(s) on the controller.
- 3. Once all relays have been tested and the test is complete, press the SUB button to return the alarm test reading back to zero and to deactivate the controller alarm(s).
- 4. Use the MENU button to scroll through the rest of the Product Settings and Configuration menu and return to Normal Operating Mode.

#### **Network ID**

The Network ID is used to synchronize the communication between a wireless controller and the AirLink 6900:

- There are 52 networks available with the GEN II 900 MHz radio.
- There are 78 networks available with the GEN II 2.4 GHz radio.

The controller and AirLink 6900 must have the same Network ID in order to communicate.

- 1. If necessary, enter the Product Settings and Configuration menu by pressing and holding the MENU button for 6 seconds.
- 2. Press and release the MENU button until the Network ID screen appears.

- 3. Press the ADD or SUB button until the Network ID matches the value being used on the Primary Monitor.
- 4. Use the MENU button to scroll through the rest of the Product Settings and Configuration menu and return to Normal Operating Mode.

### **System Information**

The system information screen allows the end-user to view the following information:

- The connection status to the primary controller.
- The scale of the sensor element.
- The battery voltage of the device.
- The value the sensor was reading when zeroed (in %volume).
- The current value the sensor element is reading (in %volume).

This screen is for informational purposes only.

- 1. If necessary, enter the Product Settings and Configuration menu by pressing and holding the MENU button for 6 seconds.
- 2. Press and release the MENU button until the System Information screen appears.

SYSTEM Rad: Link Scale: 100 Battery: 3.50v Null: 0.00%V Sens: 0.00%V

- 3. Review the information displayed.
- 4. Use the MENU button to scroll through the rest of the Product Settings and Configuration menu and return to Normal Operating Mode.

#### **Zero/Calibration Timer Information**

The zero/calibration time information screen allows the end-user to view the following information:

- The days since the sensor assembly was last zeroed.
- The days since the sensor assembly was last calibrated.
- The calibration number of the sensor, used for diagnostic purposes.

This screen is for informational purposes only.

**NOTE:** The Cal field automatically updates after an Auto Cal. When performing a Manual Cal, the gas reading must be adjusted by at least one button press to get the Cal field to update.

1. If necessary, enter the Product Settings and Configuration menu by pressing and holding the MENU button for 6 seconds.

2. Press and release the MENU button until the Zero/Calibration Timer Information screen appears.

LAST SETUP TIMES:

Zero: 1 Day(s) Cal: 1 Day(s) Cal #: 0.00

- 3. Review the information displayed.
- 4. Use the MENU button to scroll through the rest of the Product Settings and Configuration menu and return to Normal Operating Mode.

#### **Unit Information**

The unit information screen allows the end-user to view the following information:

- The number of missed radio transmissions to the controller
- The date of manufacture of the sensor assembly.
- The serial number of the sensor assembly.

This screen is for informational purposes only.

- 1. If necessary, enter the Product Settings and Configuration menu by pressing and holding the MENU button for 6 seconds.
- 2. Press and release the MENU button until the Unit Information screen appears.

#### UNIT INFO

Radio Miss: 0 Date: 04/03/2019 Serial #: C98765

- 3. Review the information displayed.
- 4. Use the MENU button to scroll through the rest of the Product Settings and Configuration menu and return to Normal Operating Mode.

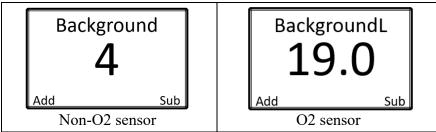

### **Background Setting**

The background setting is the gas reading at which the radio transmission changes from once every minute to once every five seconds. The background setting is adjustable so that a consistent level of gas presence does not increase the radio transmission rate.

Oxygen sensor assemblies have 2 setpoints: L (for readings below 20.9%) and H (for readings above 20.9%).

	Non-O <sub>2</sub> Sensor Assemblies	O <sub>2</sub> Sensor Assemblies
Default	4% of full scale	L: 19.0% H: 22.0%
Minimum	1% of full scale	11.0%
Maximum	10% of full scale	24.0%

- 1. If necessary, enter the Product Settings and Configuration menu by pressing and holding the MENU button for 6 seconds.
- 2. Press and release the MENU button until the Background (BackgroundL for O<sub>2</sub> versions) screen appears.

- 3. Press the ADD or SUB button until the Background (BackgroundL for O<sub>2</sub> versions) is set to the desired level.
- 4. For non-O<sub>2</sub> sensor assemblies, continue to Step 6.
- 5. For O<sub>2</sub> sensor assemblies:
  - a. Use the MENU button to scroll to the BackgroundH screen.

- b. Press the ADD or SUB button until the BackgroundH is set the desired level.
- 6. Use the MENU button to scroll through the rest of the Product Settings and Configuration menu and return to Normal Operating Mode.

#### **Calibration Method**

**NOTE:** <u>LEL</u> and  $CO_2$  - This screen does not appear in LEL or  $CO_2$  versions of the AirLink 6900 because those sensors can only be calibrated using Auto Cal.

<u>HCl</u> - It is recommended that HCl versions only be calibrated using Auto Cal but they can be calibrated using Manual Cal, if desired.

<u>HF</u> - It is recommended that HF versions only be calibrated using Manual Cal.

 $\underline{O_2}$  - If calibrating with 100%  $N_2$ , you must use Manual Cal. To calibrate using Auto Cal, a gas concentration between 10 and 18%  $O_2$  is recommended.

The calibration method selection allows you to choose how you calibrate the sensor element.

<u>Manual Calibration</u> (factory setting): Use the ADD and SUB buttons during calibration to match the reading shown on the screen to the value of the gas being applied.

<u>Auto Calibration</u>: Sets the reading, after a predetermined amount of time, during calibration to the value entered during the auto calibration setup process.

- 1. If necessary, enter the Product Settings and Configuration menu by pressing and holding the MENU button for 6 seconds.
- 2. Press and release the MENU button until the Cal Method screen appears.

Cal Method

Current: Manual

MAN AUTO

- 3. Use the ADD button to select manual calibration and the SUB button to select auto calibration.
- 4. Use the MENU button to scroll through the rest of the Product Settings and Configuration menu and return to Normal Operating Mode.

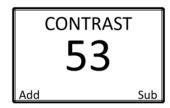

### **Display Screen Contrast Setting**

The display screen contrast is the difference in luminance or color that makes the displayed images distinguishable. Due to varying external elements, such as extreme sunlight, the brightness of the display screen may need to be adjusted for optimum viewing.

The factory default setting on the AirLink 6900 for the display screen contrast is 53, approximately 83% of the contrast scale. The contrast setting ranges from 1 to 64.

**NOTE:** Setting the contrast too low will cause the display image to become faint or indistinguishable, especially when the unit is located in areas with full-sun. The resulting field of view could be misinterpreted as an error within the device. Be sure to verify that the selected contract is within an appropriate range of viewing.

- 1. If necessary, enter the Product Settings and Configuration menu by pressing and holding the MENU button for 6 seconds.
- 2. Press and release the MENU button until the Contrast screen appears.

- 3. Use the ADD and SUB buttons to brighten and dim the contrast, respectively.
- 4. Use the MENU button to scroll through the rest of the Product Settings and Configuration menu and return to Normal Operating Mode.

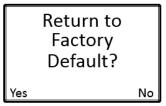

## **Return to Factory Default Settings**

Returning the AirLink 6900 to its factory default settings will reset all customization of the device, including the zero and calibration settings of the sensor element. A factory default does <u>not</u> change the gas type.

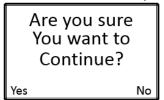

AirLink 6900 Product and Configuration Factory Default Settings		
Configuration	Setting	
Alarm Test		
Network ID	5	
System Information		
Zero/Calibration Timer	*Cleared*	
Unit Information		
Background Setting	4	
Calibration Method (non-LEL versions only)	Manual	
Contrast		

AirLink 6900 Operation Factory Default Settings		
Configuration	Setting	
Sensor Element Zero	*Cleared*	
Sensor Element Calibration	*Cleared*	
Sensor Radio Address	1	

- 1. If necessary, enter the Product Settings and Configuration menu by pressing and holding the MENU button for 6 seconds.
- 2. Press and release the MENU button until the Return to Factory Default screen appears.

- 3. Press the ADD button to return the device to its factory default settings and to advance to the return to factory default settings confirmation screen. If you do not wish to return the device to its factory default settings, press the SUB or MENU button to continue to the Reset Zero & Cal Only screen.
- 4. If "Yes" is selected to return the device to its factory default settings:

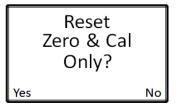

- 5. Press the ADD button to select "Yes" to confirm that you want to reset the device to its factory default settings and to return the device to Normal Operating Mode. If you do not wish to continue to return the device to its factory default settings, press the SUB button to select "No" to continue to the Reset Zero & Cal Only screen.
- 6. Use the MENU button to scroll through the rest of the Product Settings and Configuration menu and return to Normal Operating Mode.

**NOTE:** If the AirLink 6900 is reset to the factory default settings, ALL configuration steps MUST be repeated and the device MUST then be zeroed and calibrated for proper operation of the device.

#### **Reset Zero & Calibration Values**

Resetting the zero and calibration settings of the sensor element will allow the currently stored zero and calibration values to be rest without having to reconfigure all of the other operational settings like with the Return to Factory Defaults option.

- 1. If necessary, enter the Product Settings and Configuration menu by pressing and holding the MENU button for 6 seconds.
- 2. Press and release the MENU button until the Reset Zero & Calibration Values screen appears.

- 3. Press the ADD button to select "Yes" to reset the Zero and Calibration values and to advance to the Reset Zero & Cal Only confirmation screen. If you do not wish to reset the zero and calibration values, press the SUB button to select "No" to leave the Product Settings and Configuration menu and to return the device to Normal Operating Mode.
- 4. If "Yes" is selected to reset the zero and calibration values:

- 5. Press the ADD button to select "Yes" to confirm that you want to reset the Zero and Calibration values and to return the device to Normal Operating Mode. If you do not wish to continue to reset the Zero and Calibration values, press the SUB button to select "No" to leave the Product Settings and Configuration menu and to return the device to Normal Operating Mode.
- 6. Press and release the MENU button to return to Normal Operating Mode.

**NOTE:** If the AirLink 6900's stored Zero and Calibration values are reset, the device MUST be zeroed and calibrated for proper and safe operation of the device.

# **Operation Settings and Calibration**

The Operation Settings menu allows you to:

- perform a zero adjust
- perform a span adjust
- change sensor radio address

**NOTE:** After 5 minutes of no interaction with the device, the unit will automatically return to Normal Operating Mode.

The AirLink 6900 continues monitoring for gas while in the Operation Settings menu.

## Zeroing the Sensor (20.9% for O<sub>2</sub> Sensor)

The first step of calibration is zeroing (20.9% for  $O_2$  sensor). The zeroing (20.9% for  $O_2$  sensor) process MUST be performed in known clean air, with no contaminants or hazardous gasses present. If air quality cannot be guaranteed, a cylinder of zero air will be required to properly zero the sensor.

#### **Materials**

- 0.5 LPM fixed flow regulator with knob
- calibration cup
- calibration tubing
- zero air cylinder (if not in a fresh air environment)
- 100% N<sub>2</sub> cylinder (if zeroing a CO<sub>2</sub> sensor)

**NOTE:** Since there is a background of CO<sub>2</sub> in air, it is necessary to use a CO<sub>2</sub>-free cylinder when zeroing a CO<sub>2</sub> sensor.

#### **Procedure**

1. While the product is in Normal Operating Mode, press the MENU button to activate the Operation Settings menu.

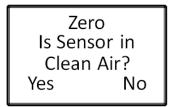

Zero
Press
ADD
to auto zero.

Non-O2 sensor

Zero
(20.9% O2)
Press
ADD
to auto zero.

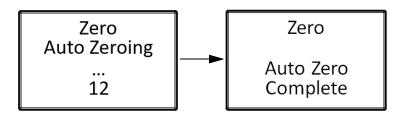

O2 sensor

2. Press the ADD button to begin the zero process and advance to the clean air confirmation screen.

- 3. If the sensor is in clean air, press the ADD button to select "Yes" and continue to Step 5.
- 4. For CO<sub>2</sub> sensors or if the sensor is not in clear air:
  - a. Unscrew and remove the rain guard from the assembly.
  - b. Install the calibration cup to the AirLink 6900's sensor housing.
  - c. Screw the regulator into the zero air calibration cylinder (100% N<sub>2</sub> cylinder if zeroing a CO<sub>2</sub> sensor).
  - d. Use the sample tubing to connect the regulator to the calibration cup.
  - e. Turn the regulator knob counterclockwise to open the regulator.
  - f. Allow the gas to flow for 1 minute.
  - g. Press the ADD button to select "Yes" and continue to Step 5.
- 5. The unit will automatically begin the 12-second zero process. During the zero, the display will show a countdown of the time remaining until the process is complete.

**NOTE:** The zero process cannot be stopped without disconnecting the power from the unit.

- 6. When the zero process is complete, press the MENU button to advance to the calibration screen.
- 7. If a zero air calibration cylinder (or  $100\% N_2$  cylinder for  $CO_2$  sensors) was used, turn the regulator knob clockwise to close the regulator.

# **Calibrating the Sensor (Manual Cal)**

Either the Manual Cal screen or the Auto Cal screen appears, depending on how Calibration Method is set in the Product Settings and Configuration Menu (see page 31).

**NOTE:** LEL and  $CO_2$  - LEL and  $CO_2$  versions of the AirLink 6900 can only be calibrated using Auto Cal (see the next section).

<u>HCl</u> - It is recommended that HCl versions only be calibrated using Auto Cal but they can be calibrated using Manual Cal, if desired.

 $\underline{O_2}$  - If calibrating with 100%  $N_2$ , you must use Manual Cal. To calibrate using Auto Cal, a gas concentration between 10 and 18%  $O_2$  is recommended.

You should ONLY calibrate the sensor after completing the zero process.

#### **Calibration Frequency**

A calibration should be performed EVERY thirty (30) days. Days since the last calibration should NEVER exceed ninety (90) days. RKI recommends that you calibrate your device regularly to ensure proper functionality and a safe work environment.

#### **Materials**

• 0.5 LPM fixed flow regulator with knob

WARNING: If calibrating with  $Cl_2$  or HCl, a regulator <u>must</u> be dedicated for use with that gas <u>only</u>. Do not use that dedicated regulator for any other gases, particularly  $H_2S$ .

- calibration cup
- calibration tubing
- calibration cylinder or gas generator (For O<sub>2</sub> sensors, RKI recommends using 100% N<sub>2</sub>. For all other sensors, RKI recommends using 50% of the full scale value of your detected gas.)

**NOTE:** Some detected gases use surrogate gases for calibration. Detected gases needing a surrogate gas for calibration are listed below. If you are using a surrogate gas for calibration, that surrogate gas concentration multiplied by the factor listed below should equal about 50% of the detected gas' full scale.

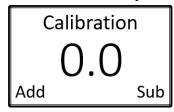

**Table 2: Surrogate Calibration Gases** 

<b>Detected Gas</b>	Surrogate Calibration Gas	Factor
ClO <sub>2</sub>	Cl <sub>2</sub>	1
HF	Cl <sub>2</sub>	7.5
О3	Cl <sub>2</sub>	0.8
	NO <sub>2</sub>	1

#### **Procedure**

- 1. If you are calibrating with HCl calibration gas, connect the tubing to the regulator, turn the regulator on, and allow gas to flow for 10 minutes before proceeding.
- 2. If you followed the instructions in Zeroing the Sensor (20.9% for O<sub>2</sub> Sensor), the screen below is displayed.

If you are accessing Manual Cal from Normal Operating Mode, press MENU twice.

- 3. Unscrew and remove the rain guard from the assembly.
- 4. Install the calibration cup to the AirLink 6900's sensor housing.
- 5. Screw the regulator into the calibration cylinder.
- 6. Use the sample tubing to connect the regulator to the calibration cup.
- 7. Turn the regulator knob counterclockwise to open the regulator.
- 8. After 20-30 seconds, start using the ADD and SUB buttons to adjust the reading to match the concentration listed on the calibration cylinder.
- 9. For all calibration gases except Cl<sub>2</sub>, ClO<sub>2</sub>, and HCl: Let the gas flow for 1 minute.

For Cl<sub>2</sub> and ClO<sub>2</sub> calibration gas: Let the gas flow for 6 minutes.

For HCl calibration gas: Let the gas flow for 5 minutes.

10. Use the ADD and SUB buttons to finish adjusting the reading on the screen to match the concentration listed on the calibration cylinder.

For detectors using a surrogate gas, adjust the reading to match the surrogate gas concentration multiplied by the factor listed in Table 2 on page 38. HF versions using 2 ppm  $\text{Cl}_2$  for calibration will have to be set above full scale to 15 ppm.

**NOTE:** For 10.6 eV and 11.7 eV PID sensors, if you are calibrating with a gas other than isobutylene, you must take the calibration gas' factor to isobutylene into account when setting the calibration gas concentration.

**NOTE:** Even if the reading does not need adjustment to match the calibration cylinder's concentration, you must adjust it up and then back down to reset the Cal field in the Zero/Calibration Timer Information screen.

- 11. When calibration is complete, remove the calibration cup from the sensor housing and reinstall the rain guard.
- 12. Press the MENU button to scroll to the Radio Address screen. See page 42 for Radio Address instructions.

# Calibrating the Sensor (Auto Cal)

Either the Manual Cal screen or the Auto Cal screen appear, depending on how Calibration Method is set in the Product Settings and Configuration Menu (see page 31).

You should ONLY calibrate the sensor after completing the zero process.

**NOTE:**  $\underline{O_2}$  - If calibrating with 100%  $N_2$ , you must use Manual Cal. To calibrate using Auto Cal, a gas concentration between 10 and 18%  $O_2$  is recommended.

<u>HF</u> - It is recommended that HF versions only be calibrated with Manual Cal.

#### Calibration Frequency

A calibration should be performed EVERY thirty (30) days. Days since the last calibration should NEVER exceed ninety (90) days. RKI recommends that you calibrate your device regularly to ensure proper functionality and a safe work environment.

#### **Materials**

• 0.5 LPM fixed flow regulator with knob

WARNING: If calibrating with  $Cl_2$  or HCl, a regulator <u>must</u> be dedicated for use with that gas <u>only</u>. Do not use that dedicated regulator for any other gases, particularly  $H_2S$ .

- calibration cup
- calibration tubing
- calibration cylinder or gas generator (For O<sub>2</sub> sensors, RKI recommends using 10-18% O<sub>2</sub>. For all other sensors, RKI recommends using 50% of the full scale value of your detected gas.)

**NOTE:** Some detected gases use surrogate gases for calibration. Detected gases needing a surrogate gas for calibration are listed below. If you are using a surrogate gas for calibration, that surrogate gas concentration multiplied by the factor listed below should equal about 50% of the detected gas' full scale.

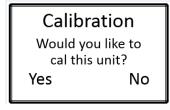

**Table 3: Surrogate Calibration Gases** 

<b>Detected Gas</b>	Surrogate Calibration Gas	Factor
ClO <sub>2</sub>	Cl <sub>2</sub>	1
HF	Cl <sub>2</sub>	7.5
О3	Cl <sub>2</sub>	0.8
	NO <sub>2</sub>	1

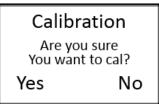

#### **Procedure**

- 1. If you are calibrating with HCl calibration gas, connect the tubing to the regulator, turn the regulator on, and allow gas to flow for 10 minutes before proceeding.
- 2. If you followed the instructions in Zeroing the Sensor (20.9% for O<sub>2</sub> Sensor), the screen below is displayed.

If you are accessing Auto Cal from Normal Operating Mode, press MENU twice.

3. Press the ADD button to select "Yes" to begin the calibration process and to advance to the calibration confirmation screen. If you do not wish to calibrate the sensor, press the SUB button to select "No" to advance to the sensor radio address setting screen.

4. Press the ADD button to select "Yes" to confirm that you want to calibrate the sensor and to continue to the concentration setting screen. If you do not wish to continue to calibrate the sensor, press the SUB button to select "No" to advance to the sensor radio address setting screen.

Calibration

Set PPM. Hit

Menu when done

Add 50 Sub

5. Use the ADD and SUB buttons to adjust the concentration match the concentration shown on the calibration cylinder.

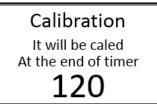

For detectors using a surrogate gas, adjust the reading to match the surrogate gas concentration multiplied by the factor listed in Table 3 on page 40.

**NOTE:** For 10.6 eV and 11.7 eV PID sensors, if you are calibrating with a gas other than isobutylene, you must take the calibration gas' factor to isobutylene into account when setting the calibration gas concentration.

- 6. Press the MENU button to save the gas concentration setting and to advance to the calibration start screen.
- 7. Unscrew and remove the rain guard from the assembly.
- 8. Install the calibration cup to the AirLink 6900's sensor housing.
- 9. Screw the regulator into the calibration cylinder.
- 10. Use the sample tubing to connect the regulator to the calibration cup.
- 11. Turn the regulator knob counterclockwise to open the regulator.

# Calibration Apply gas then hit menu button

12. Press the MENU button to begin calibrating the sensor. The unit automatically begins the calibration process. During calibration, the display shows a countdown of the time remaining until the process is complete. The amount of time varies based on the gas type.

**NOTE:** Once the calibration countdown has started, the process cannot be stopped without disconnecting the power from the unit.

13. When calibration is complete, remove the calibration cup from the sensor housing and reinstall the rain guard.

# Calibration

Unit is now caled to 50 PPM.

Reading: 50

**NOTE:** If the sensor responds extremely slow, or does not respond to the applied gas, it may indicate a failed sensor element. The sensor element will need to be replaced before completing the zero and calibration process.

- 14. Turn the regulator knob clockwise to close the regulator.
- 15. Use the MENU button to scroll to the Radio Address screen.

#### Sensor Radio Address

The AirLink 6900 radio address is adjustable from 1 to 255, each sensor assembly on the network needs a unique radio address in order to avoid a fault at the controller. The default radio address is 1.

1. From Normal Operating Mode, press and release MENU until the sensor radio address screen appears.

- 2. Use the ADD and SUB buttons to increase and decrease the sensor radio address, respectively.
- 3. Use the MENU button to save the setting and return to Normal Operating Mode.

#### **Maintenance**

RKI recommends that our equipment be calibrated a MINIMUM of every 90 days, and STRONGLY advise that calibration be performed every 30 days. Without knowing the specific application, sensor assembly location, gas exposure and other factors, the company recommends monthly calibrations – assuming no damage or potential damage has occurred to the sensor and that there has not been a power outage to the sensor assembly. If damage has occurred or the power supplied to the sensor has changed, a calibration should be completed immediately.

Scheduled maintenance should include the zero and calibration of the sensor and an alarm test. See page 35 and page 26 for instructions to perform these procedures.

The sensor head should be kept free of airborne particles, dirt, mud, spider webs, bugs and insects, and/or any other debris that could potentially cover or coat the sensor. Keeping the sensor head clear of foreign articles will allow for proper operation of the device. A brief inspection during scheduled maintenance should suffice, but dependent upon the location and the environment in which the unit is installed, more frequent inspections may be warranted.

The AirLink 6900 may be adversely affected by the exposure to certain airborne substances. Loss of sensitivity or corrosion may be gradual, if such materials are present in sufficient concentrations. The performance of the device may be impaired during operation in the presence of substances that can cause corrosion on gold plating. Other inhibiting substances are those that can coat the internal walls of the optical chamber and reduce reflectivity. These include, but are not limited to, heavy oil deposits, dust/powder, water condensation, and salt formation. Continuous and high concentrations of corrosive gases may also have a detrimental long-term effect on the product's service life. The presence of such substances in an area does not preclude the use of this device, but makes a shortened sensor element lifetime more likely. Use of the sensor assembly in these environments may require more frequently scheduled maintenance to ensure safe and reliable system performance.

# **Troubleshooting**

The troubleshooting guide describes symptoms, probable causes, and recommended action for problems you may encounter with the AirLink 6900.

**NOTE:** This troubleshooting guide describes AirLink 6900 problems only. See the controller operator's manual for problems you may encounter with the controller.

AirLink 6900 Warning Symbols (for LEL Type Only)		
Problem	Cause(s)	Solution(s)
	The sensor is undergoing a rapid temperature change, resulting in the potential loss of accuracy.	Once the sensor element temperature has stabilized, the warning will clear.
	The sensor element is in the warmup period.	1. The gas level reading will gain accuracy and the warning will clear upon completion of the warmup period. Calibrate the sensor element when the warmup period is complete.
<b>-</b> - <b>∕</b> ~-	The sensor element is experiencing high electromagnetic interference (EMI).	<ol> <li>Remove any source of electromagnetic interference (EMI).</li> <li>Reposition or relocate the AirLink 6900.</li> </ol>

# **Desiccant Replacement**

WARNING: Do not remove the sensor housing cap or enclosure lid while the circuits are energized unless the area is determined to be non-hazardous. Keep the sensor housing cap and enclosure lid tightly closed during operation.

Each AirLink 6900 comes with a desiccant bag installed in the junction box. The contents are blue when it is dry. As the desiccant absorbs moisture, it turns amber. Periodically check the desiccant and replace it if it has turned amber.

# Replacing the Batteries

Under normal conditions, the AirLink 6900 will operate for up to:

- Two years for electrochemical versions
- 1 year for LEL versions
- 14 days for PID versions

The presence of gas will increase the radio transmission rate and decrease this battery lifetime. It is recommended that the batteries be replaced when the voltage reported is 3.0 volts or less. See page 28 to determine the battery voltage. Batteries **SHOULD** be replaced in pairs and you should **NEVER** mix old and new batteries.

The AirLink 6900 is able to operate with only one battery. However, the runtime of the unit will be reduced.

WARNING: Do not remove the sensor housing cap or enclosure lid while the circuits are energized unless the area is determined to be non-hazardous. Keep the sensor housing cap and enclosure lid tightly closed during operation.

# WARNING: Only use RKI-supplied replacement batteries. Do not mix old and new batteries.

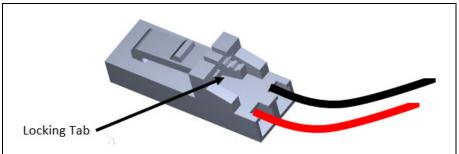

**CAUTION:** The internal components can be static sensitive. Use caution when opening the enclosure and handling internal components. DO NOT use any metal objects or tools to remove the batteries.

- 1. Press and hold the SUB button for approximately 6 seconds, until "OFF" shows on the display screen.
- 2. Unscrew the enclosure lid and set it aside.
- 3. Grab the thumbscrews and gently lift the internal system out of the enclosure. It can rest on the edge of the enclosure.

*CAUTION:* Be sure power to the AirLink 6900 is off before pulling out the internal system.

**NOTE:** Disconnecting the sensor connector plug from the sensor housing connector and the antenna fitting will allow for the complete removal of the internal system from the device enclosure. Disconnecting the internal system may provide ease in accessing the control board terminals for wiring. Reconnect the sensor connector plug before reinstalling the internal system.

4. Locate the battery connectors on the terminal board assembly. Squeeze the locking tab on one battery plug and gently pull it straight out of the battery connector. Repeat this step for the second battery plug and connector.

- 5. Gently remove the batteries from the battery spring clips.
- 6. Gently slide the new batteries into the spring clips in the same orientation as the old batteries.
- 7. Plug the battery on the bottom of the radio board into the closer 2-pin battery terminal.
- 8. Plug the battery on the top of the radio board into the other available 2-pin battery terminal.

- 9. Place the internal system back into the enclosure, matching each mounting post to its corresponding eyelet anchored within the base of the enclosure.
- 10. Using the thumbscrews, gently push to seat the internal system into the mounting posts.

**NOTE:** The thumbscrews on the AirLink 6900 function **ONLY** as thumb-holds for ease in removal of the internal system from the base of the enclosure. Do **NOT** attempt to loosen or tighten the thumbscrews when opening or closing the enclosure.

- 11. Verify that the sealing ring, seated at the threaded opening of the device enclosure, is correctly in place.
- 12. Secure the enclosure lid back onto the enclosure.

WARNING: When securing the lid onto the device, tighten the enclosure lid by hand ONLY. Overtightening of the lid by use of hand-tools could result in damage to the O-ring, potentially compromising the moisture seal, resulting in an unsafe environment.

- 13. Press the ADD button to initiate the 1-minute startup (3.5 minutes for LEL versions).
- 14. Allow the detector to warmup for the appropriate amount of time as shown below, depending on the sensor type.

<b>Detection Gas</b>	Warmup Time
Ammonia	4 hours
Carbon Dioxide	10 minutes
Carbon Monoxide	
Chlorine	
Chlorine Dioxide	
Combustible Gas	
Ethylene Oxide	
Hydrogen Chloride	
Hydrogen Cyanide	
Hydrogen Fluoride	
Hydrogen Sulfide	
Nitric Oxide	
Nitrogen Dioxide	

<b>Detection Gas</b>	Warmup Time
Oxygen	10 minutes
Ozone	
Phosphine	
Sulfur Dioxide	
VOCs	

15. Zero and calibrate the AirLink 6900 as described on page 35.

# Cleaning the 10.0 eV or 10.6 eV PID Lamp

WARNING: Do not remove the sensor housing cap or enclosure lid while the circuits are energized unless the area is determined to be non-hazardous. Keep the sensor housing cap and enclosure lid tightly closed during operation.

**CAUTION:** The internal components can be static sensitive. Use caution when opening the enclosure and handling internal components. DO NOT use any metal objects or tools to remove the sensor.

Clean the 10.0 eV or 10.6 eV lamp if you notice a significant drop in sensitivity from one scheduled calibration to another or if you are not able to calibrate the detector.

11.7 eV lamps should <u>not</u> be cleaned because of their susceptibility to moisture.

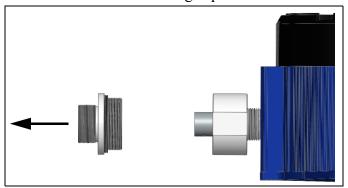

#### Cleaning Kit

The lamp cleaning kits for 10.0 eV and 10.6 eV lamps include:

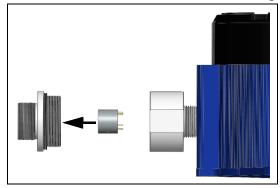

- an electrode stack removal tool
- a small vial of aluminum oxide powder
- 40 cotton swabs
- 10 finger cots

### Lamp Cleaning Procedure

- 1. Press and hold the SUB button for approximately 6 seconds, until "OFF" shows on the display screen.
- 2. Unscrew and remove the sensor housing cap from the sensor housing base. Set aside.

3. Gently unplug the sensor element from the sensor housing board.

- 4. Place the PID sensor face down on a flat clean working surface.
- 5. Do not touch the lamp window with your fingers as this may contaminate the window with finger oil. At this point it is recommended that the finger cots be used on the fingers handling the lamp. Finger cots are included with the lamp cleaning kit.
- 6. Hold the PID sensor steady on the working surface with one hand and using the other hand, locate the tabs on the electrode stack removal tool and insert them into the slots on the side of the PID sensor near the face.

Figure 7: Using Removal Tool

- 7. Squeeze the removal tool to push the tabs into the sensor slots until the electrode stack and lamp are released.
- 8. Carefully lift the PID sensor body away from the electrode stack and lamp. Take care not to touch the lamp window, the flat end of the lamp, with your fingers. If the lamp remains lodged in the sensor body, carefully remove it with tweezers.

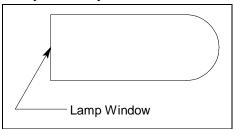

Figure 8: Lamp Window Location

- 9. If the spring in the lamp cavity comes out, place it back into the lamp cavity.
- 10. Hold the lamp in one hand being careful not to touch the lamp window with your fingers.
- 11. With the other hand collect a small amount of aluminum oxide powder on a cotton swab.
- 12. Use this cotton swab to polish the PID lamp window. Use a circular motion, applying light pressure to clean the lamp window. Do not touch the lamp window with your fingers.

Figure 9: Polishing the Electrode Lamp Window

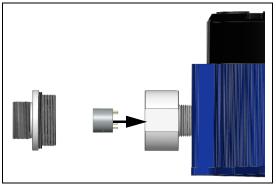

- 13. Continue polishing until you can hear a squeaking sound made by the cotton swab moving over the window surface. This usually occurs after about 15 seconds of polishing.
- 14. Remove the residual powder from the lamp window with a clean cotton swab. Take care not to touch the tip of the cotton swab that is used to clean the lamp as this may contaminate it with finger oil.
- 15. Ensure the lamp is completely dry and any visible signs of contamination are removed before reinstalling.

16. Hold the electrode stack between the thumb and forefinger of one hand and place the window end of the lamp inside the O-ring seal in the electrode stack with the other hand as shown below.

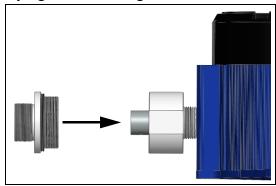

Figure 10: Reinstalling the Electrode Lamp

- 17. Twisting the lamp slightly during insertion will help to ensure the lamp window is snug against the stack's front electrode. The lamp should be supported by the O-ring.
- 18. Continuing to hold the electrode stack between your forefinger and thumb, carefully insert the lamp into the lamp cavity in the sensor ensuring that the lamp remains in position.
- 19. Press in the electrode stack firmly to ensure that the stack wing clips are engaged and the faces of the stack and sensor body are flush.
- 20. Plug the sensor element into the sensor housing board. Ensure that the pins on the sensing element align with the sockets on the sensor housing board.

21. Screw the sensor housing cap back onto the sensor housing base, ensuring that the sensor housing cap is only tightened hand tight.

- 22. Press the ADD button to initiate the 1-minute startup (3.5 minutes for LEL versions).
- 23. Wait 10 minutes and then zero and calibrate the detector as described on page 35.

# Replacing the PID Lamp

WARNING: Do not remove the sensor housing cap or enclosure lid while the circuits are energized unless the area is determined to be non-hazardous. Keep the sensor housing cap and enclosure lid tightly closed during operation.

**CAUTION:** The internal components can be static sensitive. Use caution when opening the enclosure and handling internal components. DO NOT use any metal objects or tools to remove the sensor.

If cleaning the PID lamp does not resolve any calibration problems you may be having, the lamp may need to be replaced.

#### Ordering the Correct Replacement Lamp

It's important to order the correct replacement lamp for your PID sensor.

- 1. Look at the part number label on the side of your PID sensor.
- 2. See the table below for replacement lamp part numbers based on your sensor's part number.

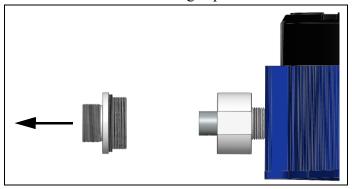

**Table 4: PID Sensor Replacement Lamp Part Number** 

Sensor Part Number	Replacement Lamp Part Number
61-0302	
61-0303	51-1503
61-0304	
61-0305	51-1504

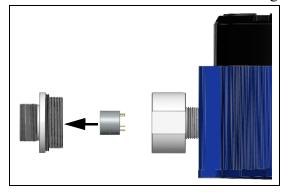

#### **Lamp Replacement Procedure**

**NOTE:** Do not touch the new lamp window (the flat end) with your fingers as this may contaminate the window with finger oil.

- 1. Press and hold the SUB button for approximately 6 seconds, until "OFF" shows on the display screen.
- 2. Unscrew and remove the sensor housing cap from the sensor housing base. Set aside.

3. Gently unplug the sensor element from the sensor housing board.

- 4. Place the PID sensor face down on a flat clean working surface.
- 5. Hold the PID sensor steady on the working surface with one hand and using the other hand, locate the tabs on the electrode stack removal tool and insert them into the slots on the side of the PID sensor near the face.

Figure 11: Using Removal Tool

- 6. Squeeze the removal tool to push the tabs into the sensor slots until the electrode stack and lamp are released.
- 7. Carefully lift the PID sensor body away from the electrode stack and lamp. If the lamp remains lodged in the sensor body, carefully remove it with tweezers.
- 8. If the spring in the lamp cavity comes out, place it back into the lamp cavity.
- 9. Discard the old PID lamp.

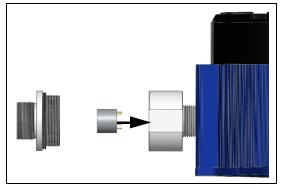

**NOTE:** At this point it is recommended that the finger cots be used on the fingers handling the lamp. Finger cots are included with the lamp cleaning kit.

10. Hold the electrode stack between the thumb and forefinger of one hand and place the window end of the new lamp inside the O-ring seal in the electrode stack with the other hand as shown below. Take care not to touch the lamp window.

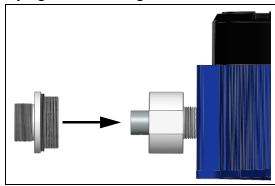

Figure 12: Reinstalling the Electrode Lamp

- 11. Twisting the lamp slightly during insertion will help to ensure the lamp window is snug against the stack's front electrode. The lamp should be supported by the O-ring.
- 12. Continuing to hold the electrode stack between your forefinger and thumb, carefully insert the lamp into the lamp cavity in the sensor ensuring that the lamp remains in position.
- 13. Press in the electrode stack firmly to ensure that the stack wing clips are engaged and the faces of the stack and sensor body are flush.
- 14. Plug the sensor element into the sensor housing board. Ensure that the pins on the sensing element align with the sockets on the sensor housing board.

15. Screw the sensor housing cap back onto the sensor housing base, ensuring that the sensor housing cap is only tightened hand tight.

- 16. Press the ADD button to initiate the 1-minute startup (3.5 minutes for LEL versions).
- 17. Wait 10 minutes and then zero and calibrate the detector as described on page 35.

# **Replacing the PID Electrode Stack**

WARNING: Do not remove the sensor housing cap or enclosure lid while the circuits are energized unless the area is determined to be non-hazardous. Keep the sensor housing cap and enclosure lid tightly closed during operation.

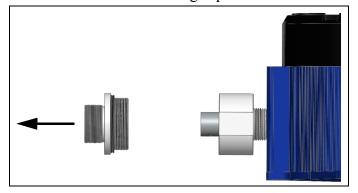

**CAUTION:** The internal components can be static sensitive. Use caution when opening the enclosure and handling internal components. DO NOT use any metal objects or tools to remove the sensor.

The electrode stack can last for the life of the PID sensor if the AirLink 6900 is used in a very clean, controlled environment. When used in a heavily contaminated or dirty environment, the electrode stack may only last a month. A contaminated electrode stack will cause a drop in sensitivity which can cause problems calibrating the PID channel. The electrode stack should be replaced if the PID sensor shows signs of contamination even after cleaning or replacing the lamp.

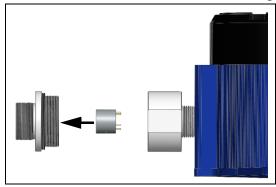

**NOTE:** Do not touch the new lamp window (the flat end) with your fingers as this may contaminate the window with finger oil.

1. Press and hold the SUB button for approximately 6 seconds, until "OFF" shows on the display screen.

2. Unscrew and remove the sensor housing cap from the sensor housing base. Set aside.

3. Gently unplug the sensor element from the sensor housing board.

4. Place the PID sensor face down on a flat clean working surface.

**NOTE:** At this point it is recommended that the finger cots be used on the fingers handling the lamp. Finger cots are included with the lamp cleaning kit.

5. Hold the PID sensor steady on the working surface with one hand and using the other hand, locate the tabs on the electrode stack removal tool and insert them into the slots on the side of the PID sensor near the face.

Figure 13: Using Removal Tool

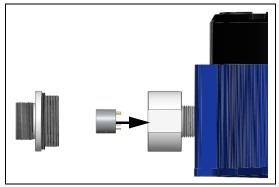

6. Squeeze the removal tool to push the tabs into the sensor slots until the electrode stack and lamp are released.

- 7. Carefully lift the PID sensor body away from the electrode stack and lamp. If the lamp remains lodged in the sensor body, carefully remove it with tweezers.
- 8. If the spring in the lamp cavity comes out, place it back into the lamp cavity.
- 9. Discard the old electrode stack.
- 10. Hold the new electrode stack between the thumb and forefinger of one hand and place the window end of the lamp inside the O-ring seal in the new electrode stack with the other hand as shown below. Take care not to touch the lamp window.

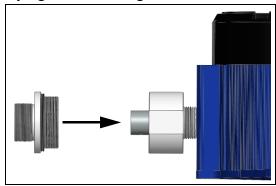

Figure 14: Reinstalling Electrode Lamp

- 11. Twisting the lamp slightly during insertion will help to ensure the lamp window is snug against the stack's front electrode. The lamp should be supported by the O-ring.
- 12. Continuing to hold the electrode stack between your forefinger and thumb, carefully insert the lamp into the lamp cavity in the sensor ensuring that the lamp remains in position.
- 13. Press in the electrode stack firmly to ensure that the stack wing clips are engaged and the faces of the stack and sensor body are flush.
- 14. Plug the sensor element into the sensor housing board. Ensure that the pins on the sensing element align with the sockets on the sensor housing board.

15. Screw the sensor housing cap back onto the sensor housing base, ensuring that the sensor housing cap is only tightened hand tight.

- 16. Press the ADD button to initiate the 1-minute startup (3.5 minutes for LEL versions).
- 17. Wait 10 minutes and then zero and calibrate the detector as described on page 35.

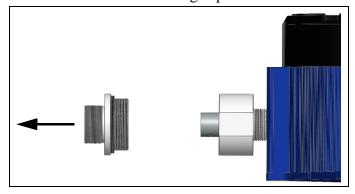

# **Sensor Replacement**

WARNING: Do not remove the sensor housing cap or enclosure lid while the circuits are energized unless the area is determined to be non-hazardous. Keep the sensor housing cap and enclosure lid tightly closed during operation.

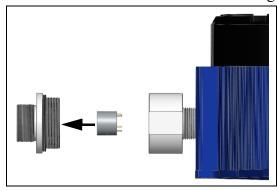

RKI recommends replacing the sensor element whenever a slow response to gas is observed during the normal calibration process. After replacing the sensor element, the device MUST be zeroed and calibrated for proper operation of the device.

**CAUTION:** The internal components can be static sensitive. Use caution when opening the enclosure and handling internal components. DO NOT use any metal objects or tools to remove the sensor.

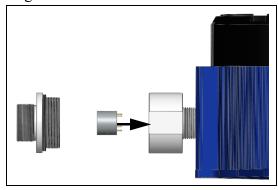

- 1. Press and hold the SUB button for approximately 6 seconds, until "OFF" shows on the display screen.
- 2. Unscrew the rain guard.
- 3. Unscrew and remove the sensor housing cap from the sensor housing base. Set aside.

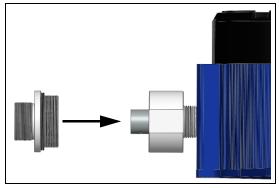

4. Gently unplug the sensor element from the sensor housing board.

5. Plug the new sensor element into the sensor housing board. Ensure that the pins on the sensing element align with the sockets on the sensor housing board.

6. Screw the sensor housing cap back onto the sensor housing base, ensuring that the sensor housing cap is only tightened hand tight.

7. Press the ADD button to initiate the 1-minute startup (3.5 minutes for LEL versions).

8. Allow the detector to warmup for the appropriate amount of time as shown below, depending on the sensor type.

<b>Detection Gas</b>	Warmup Time
Ammonia	12 hours
Carbon Dioxide	10 minutes
Carbon Monoxide	2 hours
Chlorine	
Chlorine Dioxide	
Combustible Gas	10 minutes
Ethylene Oxide	48 hours
Hydrogen Chloride	12 hours
Hydrogen Cyanide	
Hydrogen Fluoride	2 hours
Hydrogen Sulfide	
Nitric Oxide	12 hours
Nitrogen Dioxide	2 hours
Oxygen	
Ozone	
Phosphine	
Sulfur Dioxide	
VOCs	10 minutes

9. Zero and calibrate the detector as described on page 35.

# **Parts List**

Table 5 lists replacement parts and accessories for the AirLink 6900.

**Table 5: Parts List** 

Part Number	Description
33-0560RK	PID sensor electrode stack, low range 10.6 eV sensor, 2 stacks
33-0560-01	PID sensor electrode stack, low range 10.6 eV sensor, 1 stack
33-0562	PID sensor electrode stack, high range 10.6 eV sensor
33-0563	PID sensor electrode stack, 10.0 eV sensor
33-0564	PID sensor electrode stack, 11.7 eV sensor
47-5110-XX	Cable with connector for remote-mounted kit (specify length in 1-foot increment when ordering; maximum lengths listed on page 8)
47-5111-XX	Cable with connectors for remote-mounted antenna (specify length in 1-foot increment when ordering; maximum length is 100 feet)
49-1619-01	Single battery with connector (need 2 if replacing both batteries)
51-1503	PID sensor replacement lamp, for 10.0 eV, low range 10.6 eV, and high range 10.6 eV sensors
51-1504	PID sensor replacement lamp, 11.7 eV sensor
61-0302	10.6 eV low range replacement sensor, with lamp and stack
61-0303	10.6 eV high range replacement sensor, with lamp and stack
61-0304	11.7 eV replacement sensor, with lamp and stack
61-0305	10.0 eV replacement sensor, with lamp and stack
61-2003	Remote sensor mounting kit, 7-pin explosion-proof
66-0001	Sensor, carbon monoxide (CO), for up to 1,000 ppm full scale
66-0002	Sensor, oxygen (O <sub>2</sub> ), 25% volume full scale
66-0003-1	Sensor, hydrogen sulfide (H <sub>2</sub> S), 100 ppm full scale
66-0004	Sensor, hydrogen chloride (HCl), for up to 100 ppm full scale
66-0005	Sensor, hydrogen cyanide (HCN), 30 ppm full scale
66-0006-1	Sensor, ammonia (NH <sub>3</sub> ), for up to 100 ppm full scale
66-0006-2	Sensor, ammonia (NH <sub>3</sub> ), for 200 to 1,000 ppm full scale
66-0007	Sensor, nitric oxide (NO), for up to 250 ppm full scale
66-0008	Sensor, nitrogen dioxide (NO <sub>2</sub> ), 20 ppm full scale
66-0009-1	Sensor, ozone (O <sub>3</sub> ), for up to 5 ppm full scale

**Table 5: Parts List** 

Part Number	Description
66-0009-2	Sensor, ozone (O <sub>3</sub> ), for 10 to 100 ppm full scale
66-0010	Sensor, sulfur dioxide (SO <sub>2</sub> ), 20 ppm full scale
66-0012	Sensor, chlorine (Cl <sub>2</sub> ), for up to 20 ppm full scale
66-0013	Sensor, chlorine dioxide (ClO <sub>2</sub> ), for up to 5 ppm full scale
66-0014	Sensor, hydrogen fluoride (HF), 10 ppm full scale
66-0015	Sensor, phosphine (PH <sub>3</sub> ), 5 ppm full scale
66-0016	Sensor, ethylene oxide (EtO), for up to 10 ppm full scale
66-0050	Sensor, carbon dioxide (CO <sub>2</sub> ), 5.0% volume full scale
66-0060	Sensor, methane, LPIR type, 100% LEL full scale
66-0063	Sensor, general hydrocarbons, LPIR type, 100% LEL full scale
71-0534	AirLink 6900 Operator's Manual (this document)
81-0002RK-01	Calibration cylinder, 50% LEL hydrogen in air, 34 liter steel
81-0002RK-03	Calibration cylinder, 50% LEL hydrogen in air, 103 liter
81-0004RK-01	Calibration cylinder, 50% LEL propane in air, 34 liter steel
81-0004RK-03	Calibration cylinder, 50% LEL propane in air, 103 liter
81-0007RK-01	Calibration cylinder, 15% LEL hexane in air, 34 liter steel
81-0010RK-01	Calibration cylinder, 10% LEL (5000 ppm) methane in air, 34 liter steel
81-0010RK-03	Calibration cylinder, 10% LEL (5000 ppm) methane in air, 103 liter
81-0012RK-01	Calibration cylinder, 50% LEL methane in air, 34 liter steel
81-0012RK-03	Calibration cylinder, 50% LEL methane in air, 103 liter
81-0013RK-01	Calibration cylinder, 50% volume methane in nitrogen, 34 liter steel
81-0013RK-05	Calibration cylinder, 50% volume methane in nitrogen, 58 liter
81-0064RK-01	Calibration cylinder, 50 ppm CO in air, 34 liter steel
81-0064RK-03	Calibration cylinder, 50 ppm CO in air, 103 liter
81-0072RK-01	Calibration cylinder, 2.5% CO <sub>2</sub> in air, 34 liter steel
81-0072RK-03	Calibration cylinder, 2.5% CO <sub>2</sub> in air, 103 liter
81-0076RK	Zero air calibration cylinder, 17 liter
81-0076RK-01	Zero air calibration cylinder, 34 liter steel
81-0076RK-03	Zero air calibration cylinder, 103 liter

**Table 5: Parts List** 

Part Number	Description
81-0078RK-01	Calibration cylinder, 100% nitrogen, 34 liter steel
81-0078RK-03	Calibration cylinder, 100% nitrogen, 103 liter
81-0146RK-02	Calibration cylinder, 200 ppm H <sub>2</sub> S in nitrogen, 58 liter
81-0100RK-04	Calibration cylinder, 5 ppm benzene in air, 34 liter aluminum
81-0103RK-04	Calibration cylinder, 100 ppm isobutylene in air, 34 liter aluminum
81-0104RK-04	Calibration cylinder, 10 ppm isobutylene in air, 34 liter aluminum
81-0151RK-02	Calibration cylinder, 25 ppm H <sub>2</sub> S in nitrogen, 58 liter
81-0151RK-04	Calibration cylinder, 25 ppm H <sub>2</sub> S in nitrogen, 34 liter aluminum
81-0170RK-02	Calibration cylinder, 5 ppm SO <sub>2</sub> in nitrogen, 58 liter
81-0170RK-04	Calibration cylinder, 5 ppm SO <sub>2</sub> in nitrogen, 34 liter aluminum
81-0174RK-02	Calibration cylinder, 50 ppm NH <sub>3</sub> in nitrogen, 58 liter
81-0176RK-02	Calibration cylinder, 25 ppm NH <sub>3</sub> in nitrogen, 58 liter
81-0176RK-04	Calibration cylinder, 25 ppm NH <sub>3</sub> in nitrogen, 34 liter aluminum
81-0180RK-02	Calibration cylinder, 10 ppm NO <sub>2</sub> in nitrogen, 58 liter
81-0180RK-04	Calibration cylinder, 10 ppm NO <sub>2</sub> in nitrogen, 34 liter aluminum
81-0184RK-02	Calibration cylinder, 10 ppm NO in air, 58 liter
81-0185RK-02	Calibration cylinder, 0.5 ppm PH <sub>3</sub> in nitrogen, 58 liter
81-0185RK-04	Calibration cylinder, 0.5 ppm PH <sub>3</sub> in nitrogen, 34 liter aluminum
81-0190RK-02	Calibration cylinder, 5 ppm Cl <sub>2</sub> in nitrogen, 58 liter
81-0190RK-04	Calibration cylinder, 5 ppm Cl <sub>2</sub> in nitrogen, 34 liter aluminum
81-0192RK-02	Calibration cylinder, 2 ppm Cl <sub>2</sub> in nitrogen, 58 liter
81-0192RK-04	Calibration cylinder, 2 ppm Cl <sub>2</sub> in nitrogen, 34 liter aluminum
81-0194RK-02	Calibration cylinder, 10 ppm HCl in nitrogen, 58 liter
81-0196RK-02	Calibration cylinder, 10 ppm HCN in nitrogen, 58 liter
81-0196RK-04	Calibration cylinder, 10 ppm HCN in nitrogen, 34 liter aluminum
81-1050RK	Regulator with gauge and knob, 0.5 LPM, for 17 liter and 34 liter steel calibration cylinders (cylinders with external threads)
81-1051RK	Regulator with gauge and knob, 0.5 LPM, for 34 liter aluminum, 58 liter, and 103 liter calibration cylinders (cylinders with internal threads)

**Table 5: Parts List** 

Part Number	Description
81-1183	Calibration cup with 3 foot tube
81-1184	Rain guard
81-9029RK-02	Calibration cylinder, 100 ppm NH <sub>3</sub> in N <sub>2</sub> , 58 liter
81-9029RK-04	Calibration cylinder, 100 ppm NH <sub>3</sub> in N <sub>2</sub> , 34 liter aluminum
81-9062RK-04	Calibration cylinder, 5 ppm EtO in N <sub>2</sub> , 34 liter aluminum
82-0003RK	Electrode stack removal tool
82-0101RK	Magnetic wand
82-0300RK	Aluminum oxide powder PID lamp cleaning kit, with electrode stack removal tool, for 10.0 eV and 10.6 eV PID sensors' lamps ONLY
