# **Document function**

These Operating Instructions provide all of the information that is required in various phases of the life cycle of the device:

- Incoming acceptance and product identification
- Storage and transport
- Installation and connection
- Commissioning and operation
- Diagnostics and troubleshooting
- Maintenance and disposal

### **Associated documentation**

Technical Information	Overview of the device with the most important technical data.
Operating Instructions	All the information that is required in the various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal as well as the technical data and dimensions.
Sensor Brief Operating Instructions	Incoming acceptance, transport, storage and mounting of the device.
Transmitter Brief Operating Instructions	Electrical connection and commissioning of the device.
Description of Parameters	Detailed explanation of the menus and parameters.
Safety Instructions	Documents for the use of the device in hazardous areas.
Special Documentation	Documents with more detailed information on specific topics.
Installation Instructions	Installation of spare parts and accessories.

### The related documentation is available online:

	On the www.endress.com/deviceviewer website, enter the serial number of the device: nameplate $\rightarrow$ <i>Product identification</i> , $\stackrel{\triangle}{=}$ 17
Endress+Hauser Operations App	<ul> <li>Scan the Data Matrix code: nameplate → Product identification,  17</li> <li>Enter the serial number of the device: nameplate → Product identification,  17</li> </ul>

# **Symbols**

### Warnings

### **⚠** DANGER

This symbol alerts you to an immediate dangerous situation. Failure to avoid the situation will result in a fatal or serious injury.

#### **▲** WARNING

This symbol alerts you to a potentially dangerous situation. Failure to avoid the situation may result in a fatal or serious injury.

#### A CAUTION

This symbol alerts you to a potentially dangerous situation. Failure to avoid the situation may result in a minor or mild injury.

#### **NOTICE**

This symbol alerts you to a potentially harmful situation. Failure to avoid the situation may result in damage to the facility or to something in the facility's vicinity.

### **Electronics**

Safety instructions Proline Promass K 10 HART

### Requirements for specialist personnel

- ► Installation, electrical connection, commissioning, diagnostics and maintenance of the device must only be carried out by trained, specialist personnel authorized by the facility's owner-operator.
- ▶ Before commencing work, the trained, specialist personnel must carefully read, understand and adhere to the Operating Instructions, additional documentation and certificates.
- ► Comply with national regulations.

## Requirements for operating personnel

- ► Operating personnel are authorized by the facility's owner-operator and are instructed according to the requirements of the task.
- ▶ Before commencing work, the operating personnel must carefully read, understand and adhere to the instructions provided in the Operating Instructions and additional documentation.

# Incoming acceptance and transport

► Transport the device in a correct and appropriate manner.

# Adhesive labels, tags and engravings

▶ Pay attention to all the safety instructions and symbols on the device.

# **Environment and process**

- ▶ Only use the device for the measurement of appropriate media.
- ▶ Keep within the device-specific pressure range and temperature range.
- ► Protect the device from corrosion and the influence of environmental factors.

# **Occupational** safety

- ▶ Wear the required protective equipment according to national regulations.
- ▶ Do not ground the welding unit by means of the device.
- ▶ Wear protective gloves if working on and with the device with wet hands.

### Installation

- ▶ Do not remove protective covers or protective caps on the process connections until just before you install the sensor.
- ▶ Do not damage or remove the liner on the flange.
- ► Observe tightening torques.

### Electrical connection

- ► Comply with national installation regulations and guidelines.
- ▶ Observe cable specifications and device specifications.
- ► Check the cable for damage.
- ► If using the device in hazardous areas, observe the "Safety Instructions" documentation.

Proline Promass K 10 HART Safety instructions

- ▶ Provide (establish) potential equalization.
- ► Provide (establish) grounding.

# Surface temperature

Media with elevated temperatures can cause the surfaces of the device to become hot. For this reason, note the following:

- ► Mount suitable touch protection.
- ► Wear suitable protective gloves.

# Commissioning

- ► Operate the device only if it is in proper technical condition, free from errors and faults.
- ► Only put the device into operation once you have performed the post-installation check and post-connection check.

### Modifications to the device

Modifications or repairs are not permitted and can pose a danger. For this reason, note the following:

- ► Only carry out modifications or repairs after consulting beforehand with an Endress+Hauser service organization.
- ▶ Only use original spare parts and original accessories from Endress+Hauser.
- ► Install original spare parts and original accessories according to the Installation Instructions.

# 3 Product information

Measuring principle	16
Designated use	16
Incoming acceptance	16
Product identification	17
Transport	19
Checking the storage conditions	21
Recycling of packaging materials	21
Product design	22
Firmware history	23
Device history and compatibility	23

# Measuring principle

Mass flow measurement according to the Coriolis measuring principle.

# Designated use

The device is intended only for the flow measurement of liquids and gases.

Depending on the version ordered, the device measures potentially explosive, flammable, poisonous and oxidizing media.

Devices for use in a hazardous area, in hygienic applications, or where there is an increased risk due to process pressure, are labeled accordingly on the nameplate.

Non-designated use can compromise safety. The manufacturer is not liable for damage caused by improper or non-designated use.

# **Incoming acceptance**

Is technical documentation provided with the device?	
Does the scope of supply match the specifications on the delivery note?	
Is the order code on the delivery note and nameplate identical?	
Does the device bear any signs of damage from transportation?	
Has an incorrect device been ordered or delivered or has the device been damaged in transit?  Complaints or returns: www.services.endress.com/return-material	

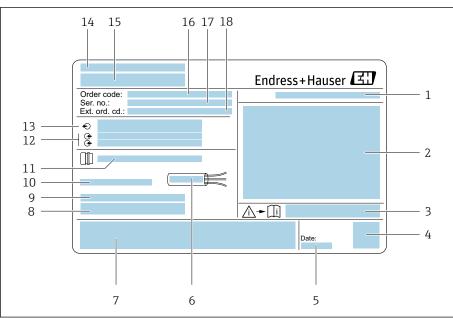

## **Product identification**

### Device name

The device comprises the following parts:

- Proline 10 transmitter
- Promass K sensor

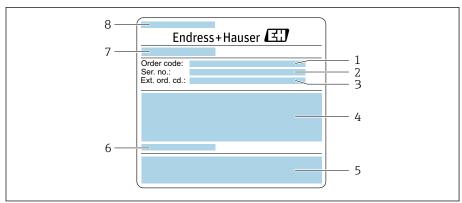

### Transmitter nameplate

#### **₽** 1 Example of a transmitter nameplate

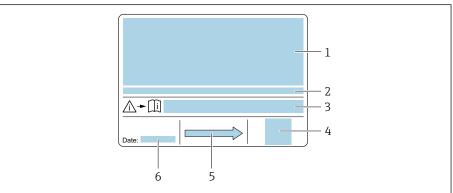

- 1 Degree of protection
- Approvals for hazardous area, electrical connection data 2
- 3 Document number of safety-related supplementary documentation
- 4 Data Matrix code
- Manufacturing date: year-month 5
- Permitted temperature range for cable
- CE mark and other approval marks
- 8 Firmware version (FW) and device revision (Dev.Rev.) from the factory
- Additional information in the case of special products
- 10 Permitted ambient temperature  $(T_a)$
- 11 Information on the cable entry
- 12 Available inputs and outputs: supply voltage
- 13 Electrical connection data: supply voltage and supply power
- Place of manufacture 14
- Transmitter name 15
- 16 Order code
- Serial number 17
- 18 Extended order code

### Sensor nameplate

A00441

- 2 Example of a sensor nameplate, part 1
- 1 Order code
- 2 Serial number (ser. no.)
- 3 Extended order code (ext. ord. cd.)
- 4 Nominal diameter of the sensor; flange nominal diameter/nominal pressure; sensor test pressure; medium temperature range; material of measuring pipe and manifold
- 5 CE mark, C-Tick
- 6 Sensor-specific information
- 7 Place of manufacture
- 8 Name of the sensor

A004414

- $\blacksquare$  3 Example of a sensor nameplate, part 2
- 1 Approval information for explosion protection, Pressure Equipment Directive and degree of protection
- *Permitted ambient temperature*  $(T_a)$
- 3 Document number of safety-related supplementary documentation
- 4 2-D matrix code
- 5 Flow direction
- 6 Manufacturing date: year-month

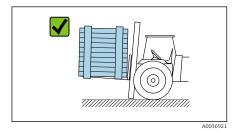

Proline Promass K 10 HART Product information

# **Transport**

### Protective packaging

Protective covers or protective caps are fitted on the process connections to protect against damage and dirt.

### Transporting in the original packaging

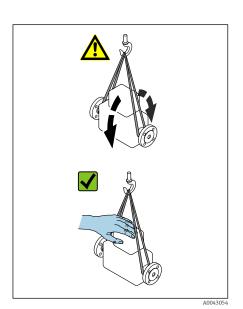

## **NOTICE**

### Original packaging is missing!

Damage to the device.

▶ Only lift and transport the device in the original packaging.

### Transporting without lifting lugs

### 1 3

# Potentially life-threatening hazard from suspended loads!

The device could fall.

**⚠** DANGER

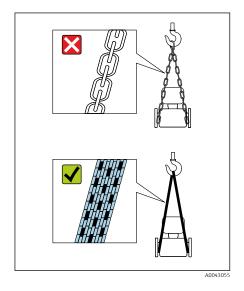

- ► Secure the device against slipping and turning.
- ► Do not move suspended loads over people.
- ▶ Do not move suspended loads over unprotected areas.

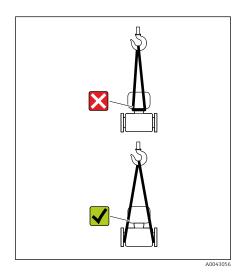

### NOTICE

### Incorrect lifting equipment can damage the device!

The use of chains as hoists can damage the device.

► Use textile hoists.

# NOTICE

# Lifting equipment incorrectly attached!

Lifting equipment attached to unsuitable points can damage the device.

Attach lifting equipment to both process connections of the device.

Proline Promass K 10 HART Product information

# Checking the storage conditions

Are the protective covers or protection caps on the process connections?	
Is the device in the original packaging?	
Is the device protected against sunlight?	
Is it guaranteed that the device is not stored outdoors?	
Is the device stored in a dry and dust-free place?	
Does the storage temperature match the device ambient temperature specified on the nameplate?	

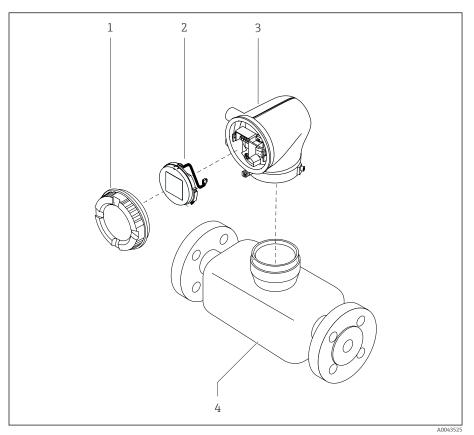

# Recycling of packaging materials

All packaging materials and packaging aids must be recycled as specified by national regulations.

- Stretch wrap: polymer in accordance with EU Directive 2002/95/EC (RoHS)
- Crate: wood in accordance with ISPM 15 standard, confirmed by IPPC logo
- Cardboard box: in accordance with European Packaging Directive 94/62/EC, confirmed by Resy symbol
- Disposable pallet: plastic or wood
- Packaging straps: plastic
- Adhesive strips: plastic
- Padding: paper

# **Product design**

The transmitter and sensor form a mechanical unit.

- € 4 Main device components
- Housing cover
- 2 3 Display module
- Transmitter housing
- Sensor

Proline Promass K 10 HART Installation

# 4 Installation

Installation conditions	26
Installing the device	30
Post-installation check	31

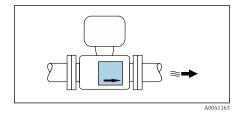

### **Installation conditions**

### Flow direction

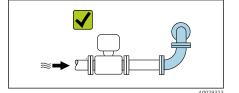

Install the device in the direction of flow.

Note the direction of arrow on the nameplate.

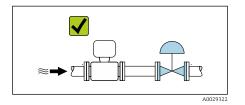

### Inlet runs and outlet runs

If no cavitation effects occur, requirements regarding inlet and outlet runs do not need to be considered during the installation.

To avoid negative pressure, install the sensor upstream from assemblies that produce turbulence (e.g. valves, T-sections) and downstream from pumps .

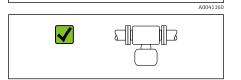

#### **Orientations**

# Vertical orientation, upward direction of flow

For all applications e.g. self-draining applications

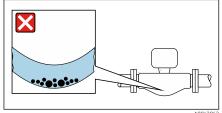

### Horizontal orientation, transmitter at top

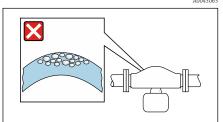

- For applications with low process temperatures in order to maintain the minimum ambient temperature for the transmitter.
- For outgassing media in order to avoid the accumulation of gas.

#### Horizontal orientation, transmitter at bottom

- For applications with high process temperatures in order to maintain the maximum ambient temperature for the transmitter.
- For media with entrained solids in order to avoid the accumulation of solids.

Proline Promass K 10 HART Installation

Horizontal orientation, transmitter with measuring pipe curved downwards Match the sensor position to the medium properties.

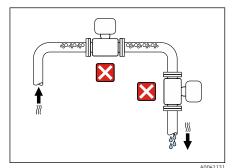

Not suitable for media with entrained solids: solids may accumulate.

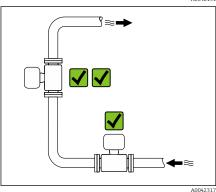

Horizontal orientation, transmitter with measuring pipe curved upwards Match the sensor position to the medium properties.

Not suitable for outgassing media: gas may accumulate.

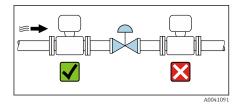

- Do not install the device at the highest point of the pipe.
- Do not install the device upstream from a free pipe outlet in a down pipe.

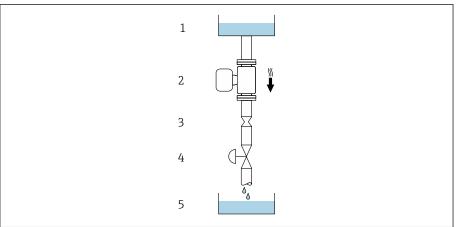

### Installation near control valves

Install the device in the direction of flow upstream from the control valve.

# Installation in a down pipe

Installation suggestion for installation in an open down pipe, e.g. for bottling applications. A pipe restriction or the use of an orifice plate with a smaller cross-section than the nominal diameter prevent the sensor running empty while measurement is in progress.

A0028773

- 1 Supply tank
- 2 Sensor
- 3 Orifice plate or pipe restriction
- 4 Valve
- 5 Filling container

D	N	Ø orifice plate, pipe restriction			
[mm]	[in]	[mm]	[in]		
8	3/8	6	0.24		
15	1/2	10	0.40		
25	1	14	0.55		
40	1½	22	0.87		
50	2	28	1.10		
80	3	50	1.97		

### Rupture disk

Information that is relevant to the process  $\rightarrow$  *Rupture disk*,  $\cong$  101.

### **▲** WARNING

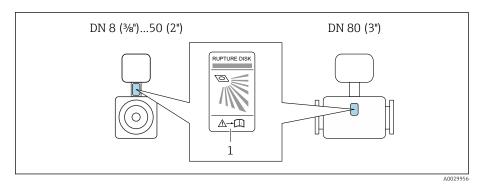

### A missing or damaged rupture disk can put staff at risk!

Medium escaping under pressure can cause serious injury or material damage.

- ► Ensure that any danger to persons or material damage is ruled out if the rupture disk is actuated.
- ▶ Observe information on the rupture disk sticker.
- ► Make sure that the function and operation of the rupture disk is not impeded during the installation of the device.
- ► Do not use a heating jacket.
- ▶ Do not remove or damage the rupture disk.
- ► After the rupture disk is actuated, do not operate the device any longer.

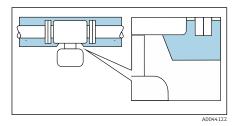

The position of the rupture disk is indicated by a sticker affixed to the device. If the rupture disk is triggered, the sticker is destroyed. The disk can therefore be visually monitored.

Proline Promass K 10 HART Installation

1 Rupture disk sticker

### Sensor thermal insulation

# NOTICE

### If the meter electronics overheat this can damage the device!

► Keep the housing support completely free (heat dissipation).

► Provide insulation but make sure it does not go beyond the upper edge of the two sensor half-shells.

### Heating

### NOTICE

### Ambient temperature too high!

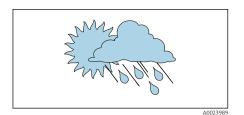

If the electronics overheat this can damage the transmitter housing.

- ► Do not exceed the permissible temperature range for the ambient temperature.
- ▶ Use a weather protection cover.
- ► Mount the device correctly.

#### Heating options

- Electrical heating, e.g. with electric band heaters
- Via pipes carrying hot water or steam
- Via heating jackets
- Heating jackets for the sensors can be ordered as accessories from Endress +Hauser: .

### **Outdoor** use

- Avoid exposure to direct sunlight.
- Install in a location protected from sunlight.
- Avoid direct exposure to weather conditions.
- Use a weather protection cover  $\rightarrow$  *Transmitter*,  $\cong$  128.

# Installing the device

### Preparing the device

- 1. Remove the entire transportation packaging.
- 2. Remove protective covers or protective caps on the device.

### **Installing seals**

### **MARNING**

### Improper process sealing can put staff at risk!

▶ Check whether the seals are clean and undamaged.

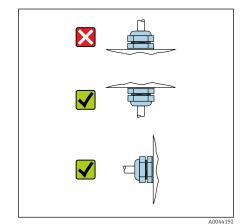

### **NOTICE**

### Incorrect installation can lead to incorrect measurement results!

- ► The internal diameter of the seal must be greater than or equal to that of the process connection and pipe.
- ► Fit the seals and measuring pipe centrically.
- ▶ Make sure that the seals do not protrude into the pipe cross-section.

### Installing the sensor

- 1. Ensure that the direction of the arrow on the sensor matches the flow direction of the medium.
- 2. Install and turn the device or transmitter housing in such a way that the cable entries point down or to the side.

# Turning the transmitter housing

- 1. Loosen the fixing screws on both sides of the transmitter housing.
- 2. NOTICE

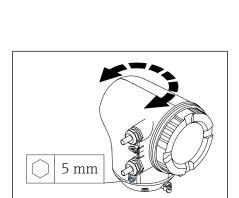

### $Overrotation\ of\ the\ transmitter\ housing!$

Interior cables are damaged.

► Turn the transmitter housing a maximum of 180° in each direction.

Turn the transmitter housing to the desired position.

3. Tighten the screws in the logically reverse sequence.

Proline Promass K 10 HART Installation

# Post-installation check

Is the device undamaged (visual inspection)?	
Does the device comply with the measuring point specifications?	
For example:  Process temperature  Process pressure  Ambient temperature  Measuring range	
Has the correct orientation been selected for the device?	
Does the direction of the arrow on the device match the flow direction of the medium?	
Is the device protected against precipitation and sunlight?	

# 5 Electrical connection

Connection conditions	34
Connecting the transmitter	35
Removing a cable	37
Ensuring potential equalization	37
Hardware settings	38
Post-connection check	39

Electrical connection Proline Promass K 10 HART

### **Connection conditions**

### Notes on the electrical connection

### **▲** WARNING

### Components carry voltage!

Incorrect work performed on the electrical connections can result in an electric shock.

- ► Have electrical connection work carried out by appropriately trained specialists only.
- ► Comply with applicable federal/national installation codes and regulations.
- ▶ Comply with national and local workplace safety regulations.
- ► Establish the connections in the correct order: always make sure to first connect the protective earth (PE) to the inner ground terminal.
- ▶ When using in hazardous areas, observe the "Safety Instructions" document.
- ▶ Ground the device carefully and provide potential equalization.
- ► Connect protective earthing to all outer ground terminals.

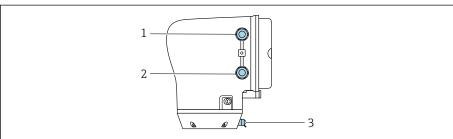

### Additional protective measures

The following protective measures are required:

- Set up a disconnecting device (switch or power-circuit breaker) to easily disconnect the device from the supply voltage.
- In addition to the device fuse, include an overcurrent protection unit, with max. 10 A, in the facility installation.
- Plastic sealing plugs act as safeguards during transportation and must be replaced by suitable, individually approved installation material.
- Connection examples:  $\rightarrow$  *Examples for electric terminals,*  $\stackrel{ op}{=}$  132

# Connecting the transmitter

### Transmitter terminal connections

A004E439

- 1 Cable entry for power supply cable: supply voltage
- 2 Cable entry for signal cable
- 3 Ground terminal, outer

### Terminal assignment

The terminal assignment is documented on an adhesive label.

The following terminal assignment is available:

Current output 4 to 20 mA HART (active) and pulse/frequency/switch output

Supply voltage		Output 1				Output 2	
1 (+)	2 (-)	26 (+)	27 (-)	24 (+)	25 (-)	22 (+)	23 (-)
L/+	N/-	Current output 4 to 20 mA HART (active)		-	-	Pulse/frequ output (	•

Current output 4 to 20 mA HART (passive) and pulse/frequency/switch output

Supply voltage		Output 1				Output 2	
1 (+)	2 (-)	26 (+) 27 (-)		24 (+)	25 (-)	22 (+)	23 (-)
L/+	N/-	-		Current output 4 to 20 mA HART (passive)		Pulse/frequ output (	

### Wiring the transmitter

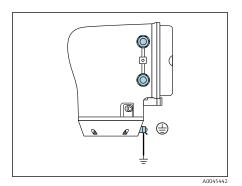

- Use a suitable cable gland for the power supply cable and signal cable.
- Pay attention to the requirements for the power supply cable and signal cable  $\rightarrow$  *Requirements for connecting cable*,  $\cong$  90.
- Use shielded cables for digital communication.

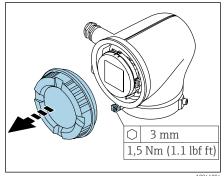

### **NOTICE**

If the cable gland is incorrect, this compromises the sealing of the housing! Damage to the device.

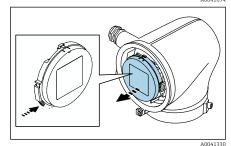

▶ Use a suitable cable gland corresponding to the degree of protection.

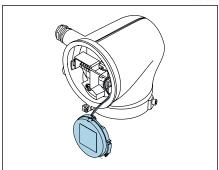

- 1. Ground the device carefully and provide potential equalization.
- 2. Connect protective earthing to the outer ground terminals.

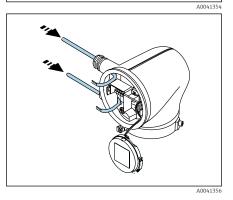

- 3. Loosen the Allen key of the securing clamp.
- 4. Unscrew the housing cover in the counterclockwise direction.

- 5. Press the tab of the display module holder.
- 6. Remove the display module from the display module holder.

- The cable must be in the tab for strain relief.
- 7. Let the display module hang down.

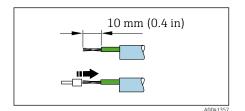

8. Remove dummy plug if present.

### NOTICE

If the sealing ring is missing, the housing is not sealed tight! Damage to the device.

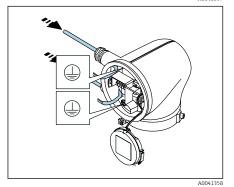

- ▶ Do not remove the sealing ring from the cable entry.
- 9. Feed the power supply cable and signal cable through the corresponding cable entry.

Proline Promass K 10 HART Electrical connection

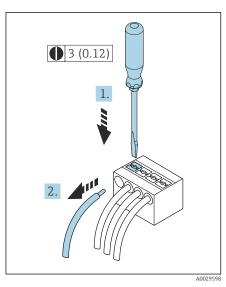

10. Strip the cable and cable ends.

11. Fit ferrules over the strands and press in place.

- The terminal assignment is documented on an adhesive label.
- 12. Connect the protective ground (PE) to the inner ground terminal.
- 13. Connect the power supply cable and signal cable as per the terminal assignment.
- 14. Connect the cable shields to the inner ground terminal.
- 15. Tighten the cable glands.
- 16. Follow the sequence in the reverse order to reassemble.

# Removing a cable

- 1. Use a flat-blade screwdriver to press down on the slot between the two terminal holes and hold.
- 2. Remove the cable end from the terminal.

**■** 5 Engineering unit mm (in)

# **Ensuring potential equalization**

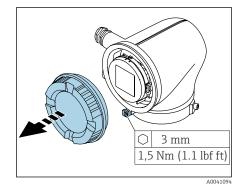

No special measures for potential equalization are required.

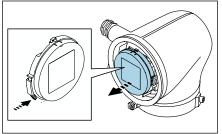

For devices intended for use in hazardous locations, please observe the guidelines in the Ex documentation (XA).

# **Hardware settings**

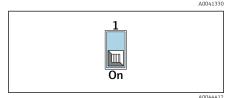

# **Enabling write protection**

- 1. Loosen the Allen key of the securing clamp.
- 2. Unscrew the housing cover in the counterclockwise direction.

- 3. Press the tab of the display module holder.
- 4. Remove the display module from the display module holder.

- 5. Set the write protection switch on the back of the display module to the **On** position.
  - ▶ Write protection is enabled.
- 6. Follow the sequence in the reverse order to reassemble.

# Post-connection check

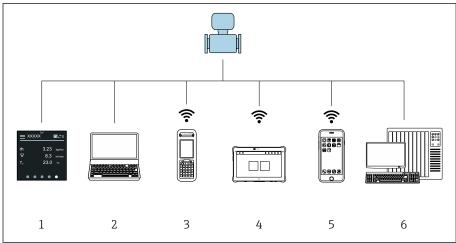

Is the protective earthing established correctly?				
Are the device and cable undamaged (visual check)?				
Do the cables meet the requirements?				
Is the terminal assignment correct?				
Are all the cable glands installed, firmly tightened and leak-tight?				
Are dummy plugs inserted in unused cable entries?				
Are transportation plugs replaced by dummy plugs?				
Are the housing screws and housing cover tightened?				
Do the cables loop down before the cable gland ("water trap")?				
Does the supply voltage match the specifications on the transmitter nameplate?				

Proline Promass K 10 HART Operation

# 6 Operation

Overview of the operating options	42
Local operation	42
SmartBlue App	47

# Overview of the operating options

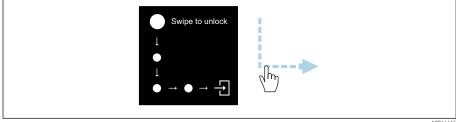

- 1 Local operation via touch screen
- Computer with operating tool, e.g. FieldCare, DeviceCare, AMS Device Manager, SIMATIC PDM
- 3 Field Xpert SFX350 or SFX370 via Bluetooth, e.g. SmartBlue App
- Field Xpert SMT70 via Bluetooth, e.g. SmartBlue App
- Tablet or smartphone via Bluetooth, e.g. SmartBlue App
- Automation system, e.g. PLC

# Local operation

#### Unlocking local operation

Local operation must first be unlocked before the device can be operated via the touch screen. To unlock, draw the pattern "L" on the touch screen.

#### **Navigation**

#### Tap

- Open menus.
- Select items in a list.
- Acknowledge buttons.
- Enter characters.

#### Swipe horizontally

Display next or previous page.

#### Swipe vertically

Display additional points in a list.

Proline Promass K 10 HART Operation

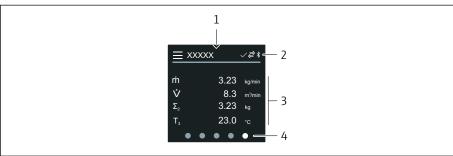

#### Operational display

During routine operation, the local display shows the operational display screen. The operational display consists of several windows which the user can toggle between.

The operational display can be customized: see the description of parameters  $\rightarrow$  *Main menu*,  $\cong$  44.

#### Operational display and navigation

4004200

- 1 Quick access
- 2 Status symbols, communication symbols and diagnostic symbols
- 3 Measured values
- 4 Rotating page display

#### Tap

- Open the main menu.
- Open quick access.

#### Swipe horizontally

Display next or previous page.

#### **Symbols**

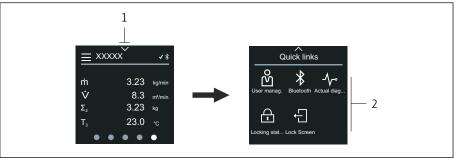

- Open the main menu.
- Quick access
- \* Bluetooth is active.
- Device communication is enabled.
- ▼ Status signal: function check
- Status signal: maintenance required
- Status signal: out of specification
- (X) Status signal: failure
- Status signal: diagnostics active.

#### **Quick access**

The Quick access menu contains a selection of specific device functions.

Quick access is indicated by a triangle at the top of the local display in the middle.

#### Quick access and navigation

- Quick access
- Quick access with specific device functions 2

#### Tap

- Back to operational display.
- Open specific device functions.

#### **Symbols**

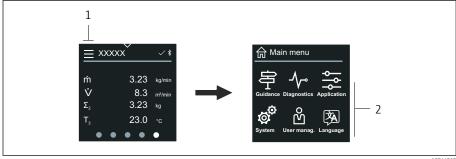

When a symbol is tapped, the local display shows the menu with the corresponding specific device functions.

- Enable or disable Bluetooth. \*
- മ Enter access code.
- Ð Write protection is enabled.
- $\times$ Back to operational display.

#### Main menu

The main menu contains all the menus required for the commissioning, configuration and operation of the device.

#### Main menu and navigation

- 1 Open the main menu.
- *Open menus for the specific device functions.*

#### Tap

- Back to operational display.
- Open menus.

Proline Promass K 10 HART Operation

#### **Symbols**

台 Back to operational display.

**Guidance** menu Configuration of the device

√ Diagnostics menu
Troubleshooting and control of device behavior

Application menu
Application-specific adjustments

System menu
Device management and user administration

🖄 Set display language.

#### Submenus and navigation

A004421

#### Tap

- Open the main menu.
- Open submenus or parameters.
- Select options.
- Skip items in list.

#### Swipe vertically

Select items in a list on a step-by-step basis.

#### **Symbols**

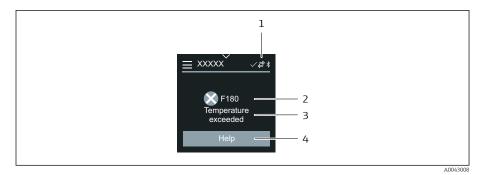

- < Return to previous menu.
- Skip to bottom of list.
- Skip to top of list.

#### **Diagnostic information**

Diagnostic information displays additional instructions or background information for diagnostic events.

#### Opening the diagnostic message

The diagnostic behavior is indicated on the top right of the local display by a diagnostics symbol. Tap the symbol or the "Help" button to open the diagnostic message.

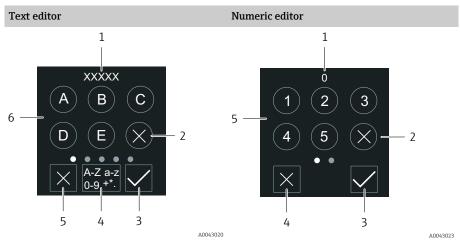

1 Device status

- 2 Diagnostic behavior with diagnostic code
- 3 Short text
- 4 Open the troubleshooting measures.

#### **Editing view**

#### Editor and navigation

The text editor is used to enter characters.

- 1 Entry display area

# **SmartBlue App**

The device has a Bluetooth interface and can be operated and configured using the SmartBlue App. The SmartBlue App must be downloaded onto a terminal device for this purpose. Any terminal device can be used.

- The range is 20 m (65.6 ft) under reference conditions.
- Incorrect operation by unauthorized persons is prevented by means of encrypted communication and password encryption.
- Bluetooth can be disabled.

Operation Proline Promass K 10 HART

# Endress+Hauser SmartBlue App: Google Playstore (Android) iTunes Apple Shop (iOS devices) ANDROID APP ON Google Play Download on the App Store

Supported functions

- Configuration of the device
- Access to measured values, device status and diagnostic information

# Measured variables via HART protocol

#### **Dynamic variables**

The following measured variables (HART device variables) are assigned to the dynamic variables at the factory:

Primary dynamic variable (PV)	Volume flow
Secondary dynamic variable (SV)	Totalizer 1
Tertiary dynamic variable (TV)	Totalizer 2
Quaternary dynamic variable (QV)	Totalizer 3

Proline Promass K 10 HART System integration

The assignment can be configured in the **Output** submenu.

#### Navigation

 $Application \rightarrow Communication \rightarrow Output$ 

- Assign PV
- Assign SV
- Assign TV
- Assign QV

#### **Device variables**

The device variables are permanently assigned. A maximum of 8 device variables can be transmitted.

- 0 Mass flow
- 1 Volume flow
- 2 Corrected volume flow
- 3 Density
- 4 Reference density
- 5 Temperature
- 6 Totalizer 1
- 7 Totalizer 2
- 8 Totalizer 3

Proline Promass K 10 HART Commissioning

# 8 Commissioning

Post-installation check and post-connection check	54
IT security	54
Device-specific IT security	54
Switching on the device	55
Commissioning the device	56

Commissioning Proline Promass K 10 HART

#### Post-installation check and post-connection check

Before commissioning the device, make sure that the post-installation and post-connection checks have been performed:

- Post-installation check → Post-installation check, 🗎 31
- Post-connection check → Post-connection check, 

  39

# IT security

We only provide a warranty if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the device settings.

IT security measures in line with operators' security standards and designed to provide additional protection for the device and device data transfer must be implemented by the operators themselves.

## **Device-specific IT security**

#### Access via Bluetooth

Secure signal transmission via Bluetooth uses an encryption method tested by the Fraunhofer Institute.

- Without the SmartBlue App, the device is not visible via Bluetooth.
- Only one point-to-point connection is established between the device and a smartphone or tablet.

#### Access via the SmartBlue App

Two access levels (user roles) are defined for the device: the **Operator** user role and the **Maintenance** user role. The **Maintenance** user role is configured when the device leaves the factory.

If a user-specific access code is not defined (in the Enter access code parameter), the default setting **0000** continues to apply and the **Maintenance** user role is automatically enabled. The device's configuration data are not write-protected and can be edited at all times.

If a user-specific access code has been defined (in the Enter access code parameter), all the parameters are write-protected. The device is accessed with the **Operator** user role. When the user-specific access code is entered a second time, the **Maintenance** user role is enabled. All parameters can be written to.

For detailed information, see the "Description of Device Parameters" document pertaining to the device.

#### Protecting access via a password

There are a variety of ways to protect against write access to the device parameters:

- User-specific access code:
   Protect write access to the device parameters via all the interfaces.
- Bluetooth key:

The password protects access and the connection between an operating unit, e.g. a smartphone or tablet, and the device via the Bluetooth interface.

Proline Promass K 10 HART Commissioning

#### General notes on the use of passwords

- The access code and Bluetooth key supplied with the device must be defined during commissioning.
- Follow the general rules for generating a secure password when defining and managing the access code and Bluetooth key.
- The user is responsible for the management and careful handling of the access code and Bluetooth key.

#### Write protection switch

The entire operating menu can be locked via the write protection switch. The values of the parameters cannot be changed. Write protection is disabled when the device leaves the factory.

Access authorization with write protection:

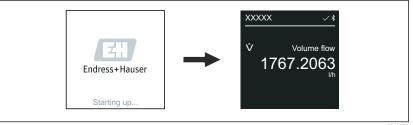

- Disabled: write access to the parameters
- Enabled: read-only access to the parameters

Write protection is enabled with the write protection switch on the back of the display module  $\rightarrow$  *Hardware settings*,  $\cong$  38.

The local display indicates that write protection is activated on the top right of the screen: 📵.

# Switching on the device

- ▶ Switch on the supply voltage for the device.
  - The local display switches from the start screen to the operational display.

A0042938

If device startup is not successful, the device displays an error message to this effect  $\rightarrow$  *Diagnostics and troubleshooting*,  $\cong$  64.

# Commissioning the device

#### Local operation

- $\square$  Detailed information on local operation:  $\rightarrow$  *Operation*,  $\square$  42
- 1. Via the "Menu" symbol, open the main menu.

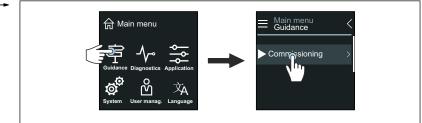

A00429

2. Via the "Language" symbol, select the desired language.

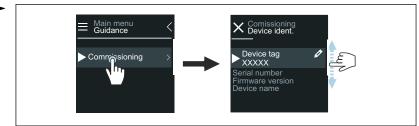

A0042940

3. Via the "Guidance" symbol, open the **Commissioning** wizard.

A004294

4. Start the **Commissioning** wizard.

.0043018

- 5. Follow the instructions on the local display.
  - The **Commissioning** wizard goes through all the device parameters that are necessary to commission the device.
- For detailed information, see the "Description of Device Parameters" document pertaining to the device.

#### SmartBlue App

Information on the SmartBlue App  $\rightarrow$  SmartBlue App,  $\stackrel{\triangle}{=}$  47.

Proline Promass K 10 HART Commissioning

#### Connecting the SmartBlue App to the device

- 1. Enable Bluetooth on the mobile handheld terminal, tablet or smartphone.
- 2. Start the SmartBlue App.
  - ► A Live List shows all the devices available.
- 3. Select the desired device.
  - ► The SmartBlue App shows the device login.
- 4. Under user name, enter admin.
- 5. Under password, enter the device's serial number. Serial number:
  - $\rightarrow$  *Transmitter nameplate,*  $\stackrel{\triangle}{=}$  17.
- 6. Confirm your entries.
  - The SmartBlue App connects to the device and displays the main menu.

#### Opening the "Commissioning" wizard

- 1. Via the **Guidance** menu, open the **Commissioning** wizard.
- 2. Follow the instructions on the local display.
  - The **Commissioning** wizard goes through all the device parameters that are necessary to commission the device.

Proline Promass K 10 HART Operation

# 9 Operation

Reading the device locking status	60
Zero point adjustment	60
HistoROM data management	61

## Reading the device locking status

Indicates the write protection with the highest priority that is currently active.

#### **Navigation**

"System" menu → Device management → Locking status

#### Parameter overview with brief description

Parameter	Description	User interface
Locking status	Indicates the write protection with the highest priority that is currently active.	<ul><li>Hardware locked</li><li>Temporarily locked</li></ul>

### Zero point adjustment

All devices are calibrated in accordance with state-of-the-art technology and under reference conditions. A zero point adjustment is generally not necessary. A zero point adjustment is advisable only in special cases:

- To achieve maximum measuring accuracy even with low flow rates
- In the event of extreme process conditions or operating conditions, e.g. very high process temperatures or very high-viscosity media.

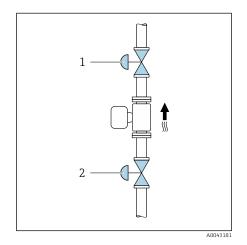

#### **Prerequisite**

- The zero point adjustment can only be performed with media that have no gas or solid contents.
- Zero point adjustment is performed at operating pressure and operating temperature with the measuring pipes completely filled and at zero flow (v = 0 m/s). For this purpose, shut-off valves (for example) can be provided upstream or downstream from the sensor, or existing valves and gate valves may be used.

 Zero point adjustment without pump pressure: shutoff valve 1 open, shutoff valve 2 closed.

#### Performing zero point adjustment

- 1. Let the system run until process conditions and operating conditions are normal.
- 2. Stop the flow.
- 3. Check that the sealing of the shutoff valves is tight (no leaks).
- 4. Check the operating pressure.

Proline Promass K 10 HART Operation

- 5. Via Application  $\rightarrow$  Sensor  $\rightarrow$  Sensor adjustment  $\rightarrow$  Zero point adjustment select the **Zero point adjustment control** parameter.
  - Zero point adjustment is started. In the **Zero point adjustment status** parameter, the **Busy** option is displayed. The **Ok** option is displayed when the zero point adjustment is finished.

## HistoROM data management

The device features HistoROM data management. Device data and process data can be saved, imported and exported with the HistoROM data management function, making operation and servicing far more reliable, secure and efficient.

#### Data backup

#### **Automatic**

The most important device data, e.g. the transmitter and sensor, are automatically saved in the S+T-DAT.

When the sensor is replaced, the customer-specific sensor data is adopted in the device. The device goes into operation immediately without any problems.

#### Manuel

The transmitter data (customer settings) must be saved manually.

#### Storage concept

	HistoROM backup	S+T-DAT
Available data	Event logbook, e.g. diagnostic events     Parameter data record backup	<ul> <li>Sensor data, e.g. nominal diameter</li> <li>Serial number</li> <li>Calibration data</li> <li>Configuration of the device, e.g. software options</li> </ul>
Storage location	On the sensor electronics module (ISEM)	In the sensor connector in the sensor neck

#### Data transfer

A parameter configuration can be transferred to another device using the export function of the operating tool. The parameter configuration can be duplicated or saved in an archive.

# General troubleshooting

# Local display

Error	Possible causes	Remedial action
Local display dark, no output signals	Supply voltage does not match that specified on the nameplate.	Apply the correct supply voltage.
	The polarity of the supply voltage is wrong.	Correct the polarity.
	No contact between cables and terminals.	<ul><li>Check contact of cables.</li><li>Connect the cables to the terminals again.</li></ul>
	Terminals are not plugged into the electronics module correctly.	<ul><li>Check the terminals.</li><li>Plug the terminals into the electronics module again.</li></ul>
	Electronics module is defective.	Order the appropriate spare part.
Local display is dark, but signal output is within the valid range.	Incorrect contrast setting of local display.	Adjust the contrast of the local display to ambient conditions.
	Cable connector for the local display is not correctly connected.	Plug in the cable connector correctly.
	Local display is defective.	Order the appropriate spare part.
Display alternates between error message and operational display	Diagnostic event has occurred.	Carry out appropriate troubleshooting measures.
Local display shows text in a foreign, incomprehensible language.	A foreign language is set.	Set the language of the local display.

# **Output signal**

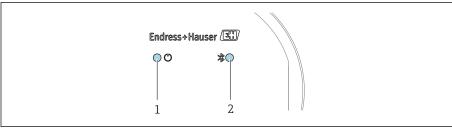

Error	Possible causes	Remedial action
Signal output is outside the valid current range ( $< 3.5 \text{ mA} \text{ or } > 23 \text{ mA}$ ).	Electronics module is defective.	Order the appropriate spare part.
Local display shows the correct value, but signal output is incorrect, though in the valid range.	Configuration error	<ul><li>Check parameter configuration.</li><li>Correct parameter configuration.</li></ul>
Device measures incorrectly.	<ul><li>Configuration error</li><li>The device is being operated outside the application range.</li></ul>	<ul><li>Check parameter configuration.</li><li>Correct parameter configuration.</li><li>Observe limit values indicated.</li></ul>
No signal at frequency output	Device uses passive frequency output.	Wire the device correctly as described in the Operating Instructions .

#### Access and communication

	1	1		
Error	Possible causes	Remedial action		
Not possible to write-access the parameter.	Write protection is enabled.	Set the write protection switch on the local display to the <b>Off</b> position.		
	Current user role has limited access	1. Check user role.		
	authorization.	2. Enter correct customer-specific access code.		
HART communication is not possible.	Load resistor missing or size is incorrect	<ul> <li>Load resistor must be at least 250 Ω.</li> <li>Observe the maximum load → Output signal, ≅ 84.</li> <li>→ Examples for electric terminals, ≅ 132</li> </ul>		
	• Commubox is connected incorrectly.	Observe the documentation for the		
	<ul><li>Commubox is configured incorrectly.</li><li>Commubox driver is not installed</li></ul>	Commubox.		
	correctly.  Wrong USB interface is configured on PC.	FXA195 HART: Document "Technical Information" TI00404F		
Device communication is not possible.	Data transfer is active.	Wait until the data transfer or the current action is finished.		
SmartBlue App does not show the device in the live list.	<ul><li>Bluetooth is disabled on the device.</li><li>Bluetooth is disabled on the smartphone or tablet.</li></ul>	Check whether the Bluetooth symbol appears on the local display.		
		2. Enable Bluetooth on the device.		
		3. Enable Bluetooth on the smartphone or tablet.		
Device cannot be operated with the SmartBlue App.	<ul> <li>Bluetooth connection is not available.</li> </ul>	Check whether other devices are connected to the SmartBlue App.		
	■ The device is already connected to another smartphone or tablet.	2. Disconnect any other device connected to the SmartBlue App.		
	• Incorrect password entered.	1. Enter correct password.		
	Password forgotten.	2. Contact Endress+Hauser service organization.		
Login with user data is not possible with the SmartBlue App.	Device in operation for the first time.	1. Enter the initial password (serial number of the device).		
		2. Change the initial password.		
No connection via service interface	<ul> <li>Commubox driver is not installed correctly.</li> </ul>	Observe the documentation for the Commubox.		
	<ul><li>Wrong USB interface is configured on PC.</li></ul>	FXA291 HART: Document "Technical Information" TI00405C		

# Diagnostic information via LED

Only for devices with the order code for "Display; operation", option  $\boldsymbol{H}$ 

A00442

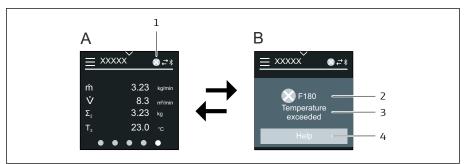

- l Device status
- 2 Bluetooth

LED		Status	Meaning
1	Device status (normal operation)	Off	No power supply
		Permanently green	Device status is OK. No warning / failure / alarm
		Flashing red	Warning is active.
		Permanently red	Alarm is active.
2	Bluetooth	Off	Bluetooth is disabled.
		Permanently blue	Bluetooth is enabled.
		Flashing blue	Data transfer in progress.

# Diagnostic information on local display

#### Diagnostic message

The local display alternates between displaying faults as a diagnostic message and displaying the operational display screen.

A0042937

- A Operational display in alarm condition
- B Diagnostic message
- 1 Diagnostic behavior
- 2 Status signal
- 3 Diagnostic behavior with diagnostic code
- 4 Short text
- 5 Open information on remedial measures.

If two or more diagnostics events are pending simultaneously, the local display only shows the diagnostic message with the highest priority.

- Via parameters
- Via submenus

#### Status signals

The status signals provide information on the state and reliability of the device by categorizing the cause of the diagnostic information (diagnostic event).

The status signals are categorized according to NAMUR Recommendation NE 107: F = Failure, C = Function Check, S = Out of Specification, M = Maintenance Required, N = No Effect

#### Failur

- A device error has occurred.
- Measured value is no longer valid.

#### **Function check**

Device is in the service mode, e.g. during a simulation.

#### Out of specification

- Device is being operated outside the technical specification limits, e.g. outside the process temperature range.
- Device is being operated outside the configuration carried out by the user, e.g. max. flow in the 20 mA value parameter.

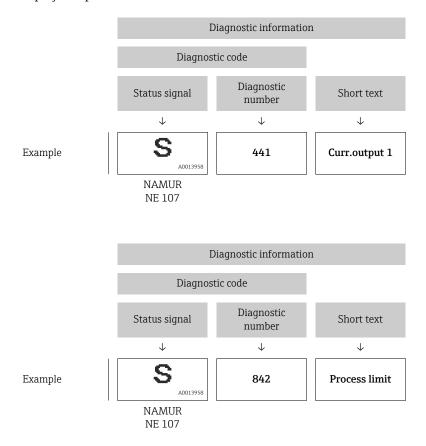

#### Maintenance required

- Maintenance is required.
- Measured value is still valid.

#### Diagnostic information

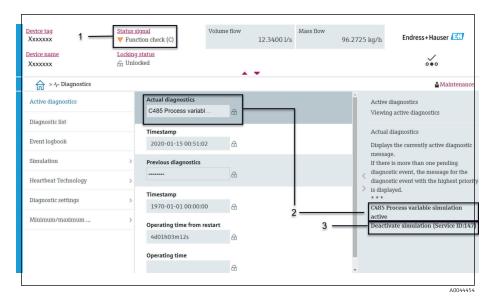

The fault can be identified using the diagnostic information. The short text displays a tip about the fault.

# Diagnostic information in FieldCare or DeviceCare

# **Diagnostic options**

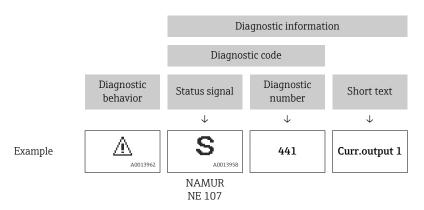

After the connection has been established, the device shows faults on the home page.

- 1 Status area with diagnostic behavior and status signal
- 2 Diagnostic code and short message
- 3 Troubleshooting measures with service ID
- Other diagnostic events that have occurred can be opened in the **Diagnostics** menu as follows:
  - Via parameter
  - Via submenus

#### **Diagnostic information**

The fault can be identified using the diagnostic information. The short text displays a tip about the fault. The corresponding symbol for the diagnostic behavior appears at the start.

# Changing the diagnostic information

#### Adapting the status signal

Each item of diagnostic information is assigned a specific status signal at the factory. The user can change the assignment for specific diagnostic information in the "Diagnostic settings" submenu.

#### Navigation path

Diagnostics → Diagnostic settings

Configuration of the device as per HART 7 Specification (Condensed Status), in accordance with NAMUR NE107.

#### **Failure**

- A device error has occurred.
- Measured value is no longer valid.

#### Function check

Device is in the service mode, e.g. during a simulation.

#### Out of specification

- Device is being operated outside the technical specification limits, e.g. outside the process temperature range.
- Device is being operated outside the configuration carried out by the user, e.g. max. flow in the 20 mA value parameter.

#### Maintenance required

- Maintenance is required.
- Measured value is still valid.

#### Adapting the diagnostic behavior

Each item of diagnostic information is assigned a specific diagnostic behavior at the factory. The user can change the assignment for specific diagnostic information in the **Diagnostic settings** submenu.

#### Navigation path

Diagnostics → Diagnostic settings

You can assign the following options to the diagnostic number as the diagnostic behavior:

Options	Description
Alarm	<ul> <li>Device stops measurement.</li> <li>Signal outputs and totalizers assume a defined alarm condition.</li> <li>Diagnostic message is generated.</li> <li>Background lighting changes to red.</li> </ul>
Warning	<ul> <li>Device continues measuring.</li> <li>Signal outputs and totalizers are not affected.</li> <li>Diagnostic message is generated.</li> </ul>
Logbook entry only	<ul> <li>Device continues measuring.</li> <li>The local display shows the diagnostic message in the Event logbook submenu (Event list submenu) and does not alternate with the operational display.</li> </ul>
Off	<ul><li>Diagnostic event is ignored.</li><li>Diagnostic message is not generated and not entered.</li></ul>

# Overview of diagnostic information

The amount of diagnostic information and the number of measured variables affected increase if the device has one or more application packages.

# Pending diagnostic events

The **Active diagnostics** submenu displays the current diagnostic event and the last diagnostic event to occur.

73

Diagnostics → Active diagnostics

The **Diagnostic list** submenu shows other diagnostic events that are pending.

# Diagnostic list

The **Diagnostic list** submenu shows up to 5 currently pending diagnostic events with the related diagnostic information. If more than 5 diagnostic events are pending, the local display shows the diagnostic information with the highest priority.

#### Navigation path

Diagnostics → Diagnostic list

## **Event logbook**

## Reading out the event logbook

The event logbook is only available via FieldCare or SmartBlue App (Bluetooth).

The **Event logbook** submenu shows a chronological overview of the event messages that have occurred.

## Navigation path

**Diagnostics** menu → **Event logbook** submenu

Chronological display with a maximum of 20 event messages.

The event history includes the following entries:

- Diagnostic event  $\rightarrow$  Overview of diagnostic information,  $\stackrel{ o}{=}$  70
- Information event  $\rightarrow$  Overview of information events,  $\stackrel{\triangle}{=}$  74

In addition to the operation time of the event occurrence, each event is also assigned a symbol that indicates whether the event has occurred or has ended:

- Diagnostic event
  - ①: Occurrence of the event
  - ⊖: End of the event
- Information event
  - €: Occurrence of the event

Filter event messages:

## Filtering the event logbook

The **Event logbook** submenu displays the category of event messages that were configured with the **Filter options** parameter.

## Navigation path

 $Diagnostics \rightarrow Event logbook \rightarrow Filter options$ 

## Filter categories

- All
- Failure (F)
- Function check (C)
- Out of specification (S)
- Maintenance required (M)
- Information (I)

## Overview of information events

The information event is only displayed in the event logbook.

# **Device reset**

The entire configuration, or a part of the configuration, can be reset to a defined state here.

## Navigation path

System  $\rightarrow$  Device management  $\rightarrow$  Device reset

Options	Description
To delivery settings	Every parameter for which a customer-specific default setting was ordered is reset to the customer-specific value. All other parameters are reset to the factory setting.
Of customer settings	Visibility depends on order options or device settings
Restart device	The restart resets every parameter with data stored in volatile memory (RAM) to the factory setting (e.g. measured value data). The device configuration remains unchanged.
Restore S-DAT backup	Restore the data that is saved on the S-DAT. The data record is restored from the electronics memory to the S-DAT. Visibility depends on order options or device settings
	The local display only displays this option in an alarm condition.

Proline Promass K 10 HART

# 11 Maintenance

Maintenance tasks	78
Services	78

Maintenance Proline Promass K 10 HART

## Maintenance tasks

The device is maintenance-free. Modifications or repairs may only be carried out following consultation with an Endress+Hauser service organization. It is recommended to examine the device regularly for corrosion, mechanical wear and damage.

## **Exterior cleaning**

Clean the device as follows:

- Use a dry or slightly damp lint-free cloth.
- Do not use sharp objects or aggressive cleaning agents.
- Do not use high-pressure steam.

## Interior cleaning

Note the following for cleaning and sterilization in place (CIP/SIP):

- Only use cleaning agents to which the process-wetted materials are resistant.
- Observe the permitted maximum medium temperature  $\rightarrow \triangleq 97$ .

## **Services**

Endress+Hauser offers a wide range of services for device maintenance, e.g. recalibration, maintenance service or device tests.

Endress+Hauser sales organizations can provide information about the services available.

Proline Promass K 10 HART Disposal

# 12 Disposal

Removing the device	80
Disposing of the device	80

# Removing the device

- 1. Disconnect the device from the supply voltage.
- 2. Remove all connecting cables.

## **A** WARNING

# Process conditions can put staff at risk!

- ▶ Wear suitable protective equipment.
- ► Allow the device and pipe to cool.
- ► Empty the device and pipe so that they are unpressurized.
- ▶ Rinse the device and pipe if necessary.
- 3. Remove the device correctly.

# Disposing of the device

## **▲** WARNING

## Dangerous media can endanger staff and the environment!

► Ensure that the device and all cavities are free of medium residues that are hazardous to health or the environment, e.g. substances that have permeated into crevices or diffused through plastic.

If required by the Directive 2012/19/EU of the European Parliament and the

A0042336

Council of 4 July 2012 on waste electrical and electronic equipment (WEEE), the device is marked with the depicted symbol in order to minimize the disposal of WEEE as unsorted municipal waste.

- Do not dispose of devices bearing this marking as unsorted municipal waste.
   Instead, return them to Endress+Hauser for disposal under the applicable conditions
- Observe applicable federal/national regulations.
- Ensure proper separation and reuse of the device components.
- Overview of installed materials: → *Materials*, 🖺 103

## Measured variable

Direct measured variables	<ul> <li>Mass flow</li> <li>Temperature</li> <li>Density*</li> <li>* Visibility depends on order options or device settings</li> </ul>

## Calculated measured variables

- Volume flow
- Corrected volume flow

# Operable flow range

Over 1000:1

Flow rates above the set end value do not overload the electronics. The totalized flow volume is measured correctly.

## Measuring range

## Measuring range for liquids

DN		Measuring range full ṁ <sub>m.</sub>	(- /
[mm]	[in]	[kg/h]	[lb/min]
8	3/8	0 to 2 000	0 to 73.50
15	1/2	0 to 6500	0 to 238.9
25	1	0 to 18 000	0 to 661.5
40	1½	0 to 45 000	0 to 1654
50	2	0 to 70 000	0 to 2 573
80	3	0 to 180 000	0 to 6615

## Measuring range for gases

The full scale value depends on the density and the sound velocity of the gas used and can be calculated with the formula below:

 $\dot{m}_{\max(G)} = \text{minimum } (\dot{m}_{\max(F)} \cdot \rho_G : x ; \rho_G \cdot c_G \cdot \pi/2 \cdot (d_i)^2 \cdot 3600)$ 

m <sub>max(G)</sub>	Maximum full scale value for gas [kg/h]
m <sub>max(F)</sub>	Maximum full scale value for liquid [kg/h]
$\dot{m}_{\max(G)} < \dot{m}_{\max(F)}$	$\dot{m}_{ max(G)}$ can never be greater than $\dot{m}_{ max(F)}$
$\rho_{G}$	Gas density in [kg/m³] at operating conditions
х	Constant dependent on nominal diameter
$c_{G}$	Sound velocity (gas) [m/s]
$d_i$	Measuring pipe internal diameter [m]

82

DN		х
[mm]	[in]	[kg/m³]
8	3/8	85
15	1/2	110
25	1	125
40	11/2	125
50	2	125
80	3	155

## Calculation example for gas

- Sensor: Promass K, DN 50
- Gas: Air with a density of 60.3 kg/m³ (at 20 °C and 50 bar)
- Measuring range (liquid): 70 000 kg/h
- $x = 125 \text{ kg/m}^3 \text{ (for Promass K, DN 50)}$

Maximum possible full scale value:

 $\dot{m}_{max(G)}=\dot{\tilde{m}}_{max(F)}\cdot\rho_G$  : x = 70 000 kg/h  $\cdot$  60.3 kg/m³ : 125 kg/m³ = 33 800 kg/h

Pulse output	Selectable:  • Actual value  • No pulses
Frequency output	Selectable:  Actual value  O Hz  Defined value: 0 to 12 500 Hz
Switch output	Selectable:  Current status  Open  Closed

## Low flow cut off

The switch points for low flow cut off are user-selectable.

## Ex connection data

Pay attention to the documentation on Ex connection values .

Safety-related values and intrinsically safe values: Safety Instructions (XA)

### **Galvanic** isolation

The outputs are galvanically isolated from one another and from earth.

## Protocol-specific data

Bus structure	The HART signal overlays the 4 to 20 mA current output.			
Manufacturer ID	0x11			
Device type ID	0x72			
HART protocol revision	7			

Device description files (DTM, DD)	Information and files under: www.endress.com
HART load	At least 250 $\Omega$
System integration	Measured variables via HART protocol

# **Power supply**

## Terminal assignment

The terminal assignment is documented on an adhesive label.

The following terminal assignment is available:

Current output 4 to 20 mA HART (active) and pulse/frequency/switch output

Supply	Supply voltage Output 1		Output 2				
1 (+)	2 (-)	26 (+) 27 (-)		24 (+)	25 (-)	22 (+)	23 (-)
L/+	N/-	Current output 4 to 20 mA HART (active)		_		Pulse/frequency/switch output (passive)	

Current output 4 to 20 mA HART (passive) and pulse/frequency/switch output

Supply	voltage		Outp	out 1		Outp	out 2
1 (+)	2 (-)	26 (+)	27 (-)	24 (+)	25 (-)	22 (+)	23 (-)
L/+	N/-	-	-	Current 4 to 20 m (pass		Pulse/frequ output (	ency/switch passive)

## Supply voltage

Order code for "Power supply"	Terminal voltage		Frequency range
Option <b>D</b>	DC 24 V	-20 to +30 %	_
Option <b>E</b>	AC 100 to 240 V	-15 to +10 %	50/60 Hz,±5 Hz
Option <b>I</b>	DC 24 V	-20 to +30 %	_
	AC 100 to 240 V	-15 to +10 %	50/60 Hz, ±5 Hz
Option ${\bf M}$ non-hazardous area	DC 24 V	-20 to +30 %	_
	AC 100 to 240 V	-15 to +10 %	50/60 Hz, ±5 Hz

## **Power consumption**

- Transmitter: max. 10 W (active power)
- Switch-on current: max. 36 A (< 5 ms) as per NAMUR Recommendation NE 21

## **Current consumption**

- Max. 400 mA (24 V)
- Max. 200 mA (110 V, 50/60 Hz; 230 V, 50/60 Hz)

## Power supply failure

- Totalizers stop at the last value measured.
- Device configuration remains unchanged.
- Error messages (incl. total operated hours) are stored.

## **Terminals**

Spring terminals

- Suitable for strands and strands with ferrules.
- Conductor cross-section 0.2 to 2.5 mm<sup>2</sup> (24 to 12 AWG).

#### Cable entries

- Cable gland: M20 × 1.5 for cable Ø6 to 12 mm (0.24 to 0.47 in)
- Thread for cable entry:
  - NPT ½"
  - G ½", G ½" Ex d
  - M20

# Cable specification

## Requirements for connecting cable

#### **Electrical safety**

As per applicable national regulations.

## Permitted temperature range

- Observe the installation guidelines that apply in the country of installation.
- The cables must be suitable for the minimum temperatures and maximum temperatures to be expected.

#### Power supply cable (incl. conductor for the inner ground terminal)

- A standard installation cable is sufficient.
- Provide grounding according to applicable national codes and regulations.

#### Signal cable

- Current output 4 to 20 mA HART:
   A shielded cable is recommended, observe the grounding concept of the facility.
- Pulse/frequency/switch output: Standard installation cable

# **Performance characteristics**

# Reference operating conditions

- Error limits based on ISO 11631
- Water with +15 to +45  $^{\circ}$ C (+59 to +113  $^{\circ}$ F) at 2 to 6 bar (29 to 87 psi)
- Data as indicated in the calibration protocol
- Accuracy based on accredited calibration rigs according to ISO 17025
- To obtain measured errors, use the *Applicator* sizing tool  $\Rightarrow$  *Service-specific accessory* ,  $\trianglerighteq$  129

## Maximum measured error

o.r. = of reading;  $1 \text{ g/cm}^3 = 1 \text{ kg/l}$ ; T = medium temperature

## **Accuracy of outputs**

Current output	±5 μA
Pulse/frequency output	Max. $\pm 100$ ppm o. r. (across the entire ambient temperature range)

# Repeatability

o.r. = of reading; T = medium temperature

→ Design fundamentals, 🗎 94

Mass flow (liquids)	±0.1 % o.r.
Mass flow (gases)	±0.5 % o.r.
Density (liquids)	Only devices with the order code for "Application package", option EF $\pm 0.00025$ g/cm³ (1 kg/l)
Temperature	±0.25 °C ± 0.0025 · T °C (±0.45 °F ± 0.0015 · (T-32) °F)

# Response time

The response time depends on the configuration (damping).

# Influence of ambient temperature

Current output	Temperature coefficient max. 1 µA/°C
Pulse/frequency output	No additional effect. Is included in the accuracy.

# Influence of medium temperature

o.f.s. = of full scale value

92

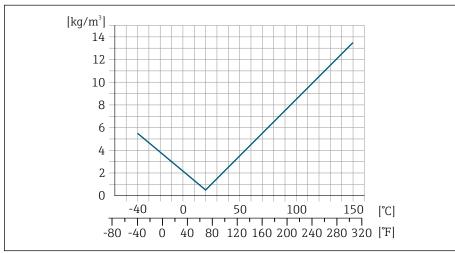

#### Mass flow and volume flow

• When there is a difference between the temperature for zero point adjustment and the process temperature, the additional measured error of the sensor is typically  $\pm 0.0002$  % o.f.s./°C ( $\pm 0.0001$  % o.f.s./°F).

 The effect is reduced if zero point adjustment is performed at process temperature.

#### **Density**

When there is a difference between the density calibration temperature and the process temperature, the typical measured error of the sensor is  $\pm 0.0001 \text{ g/cm}^3$  /°C ( $\pm 0.00005 \text{ g/cm}^3$  /°F). Field density calibration is possible.

■ 6 Field density calibration, for example at  $+20 \,^{\circ}\text{C}$  (+68  $^{\circ}\text{F}$ )

#### A0016609

## **Temperature**

 $\pm 0.005 \cdot \text{T} \, ^{\circ}\text{C} \, (\pm 0.005 \cdot (\text{T} - 32) \, ^{\circ}\text{F})$ 

## Influence of medium pressure

o.r. = of reading

The table below shows the effect of a difference in pressure between the calibration pressure and process pressure on the accuracy with mass flow.

It is possible to compensate for the effect by:

- Reading in the current pressure measured value via the current input.
- Specifying a fixed value for the pressure in the device parameters.

D	N	[% o.r./bar]	[% o.r./psi]		
[mm]	[in]				
8	3/8	no influence			
15	1/2	no influence			
25	1	no influence			
40	1½	no influence			
50	2	-0.009	-0.0006		
80	3	-0.020	-0.0014		

# **Design fundamentals**

o.r. = of reading

BaseAccu = base accuracy as % o.r

BaseRepeat = base repeatability as % o.r.

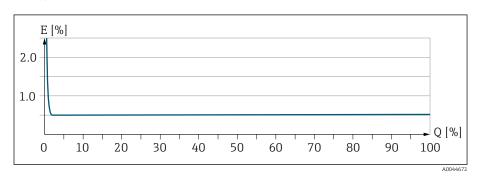

MeasValue = measured value

ZeroPoint = zero point stability

#### Calculation of the maximum measured error as a function of the flow rate

Flow rate	$\geq \frac{\text{ZeroPoint}}{\text{BaseAccu}} \cdot 100$	< ZeroPoint · 100
Maximum measured error in % o.r.	± BaseAccu	± ZeroPoint MeasValue · 100

## Example for maximum measured error

- E Maximum measured error in % o.r. (example)
- Q Flow rate in % of maximum full scale value

## Calculation of the maximum repeatability as a function of the flow rate

Flow rate	≥ ½·ZeroPoint BaseRepeat · 100	< ½· ZeroPoint BaseRepeat · 100
Maximum measured error in % o.r.	± BaseRepeat	± ½ · ZeroPoint / MeasValue · 100

# **Environment**

# Ambient temperature range

Transmitter and sensor	-40 to +60 °C (-40 to +140 °F)
Local display	$-20$ to $+60^{\circ}\text{C}$ ( $-4$ to $+140^{\circ}\text{F})$ The readability of the display may be impaired at temperatures outside the temperature range.
	Dependency of ambient temperature on medium temperature $\rightarrow$ <i>Medium temperature range</i> , $\stackrel{\triangle}{=}$ 97
	If using the device in hazardous areas, observe the "Safety Instructions" documentation.
	Storage temperature

The storage temperature corresponds to the ambient temperature range of the transmitter and sensor.

## **Climate class**

DIN EN 60068-2-38 (test Z/AD)

# **Degree of protection**

	■ IP66/67, type 4X enclosure ■ Open housing: IP20, type 1 enclosure
Sensor	IP66/67, type 4X enclosure

## Vibration-resistance and shock-resistance

Vibration, sinusoidal ■ Following IEC 60068-2-6 ■ 20 cycles per axis	2 to 8.4 Hz 8.4 to 2 000 Hz	3.5 mm peak 1 g peak
Vibration, broad-band random ■ Following IEC 60068-2-64 ■ 120 min per axis	10 to 200 Hz 200 to 2000 Hz	$0.003 \text{ g}^2/\text{Hz}$ $0.001 \text{ g}^2/\text{Hz}$ (1.54 g rms)
Shocks, half-sine Following IEC 60068-2-27 Joseph 2 positive and 3 negative shocks	6 ms 30 g	

#### Shock

Due to rough handling according to IEC 60068-2-31.

## **Electromagnetic compatibility (EMC)**

As per IEC/EN 61326 and NAMUR Recommendation NE 21.

For more information: Declaration of Conformity

# **Interior cleaning**

Available methods of internal cleaning:

• Cleaning in place (CIP)

• Sterilization in place (SIP)

## **Process**

## Medium temperature range

-40 to +150 °C (-40 to +302 °F)

## **Density**

0 to  $5000 \text{ kg/m}^3$  (0 to 312 lb/cf)

#### Flow limit

Select the nominal diameter by optimizing between the required flow range and permissible pressure loss.

- For an overview of the measuring range full scale values:  $\rightarrow$  *Measuring range*,  $\cong$  82
- The minimum recommended full scale value is approx. 1/20 of the maximum full scale value
- For the most common applications, 20 to 50 % of the maximum full scale value can be considered ideal
- A low full scale value must be selected for abrasive media (such as liquids with entrained solids): flow velocity < 1 m/s (< 3 ft/s).
- For gas measurement the following rules apply:
  - The flow velocity in the measuring pipes should not exceed half the sound velocity (0.5 Mach).
  - The maximum mass flow depends on the density of the gas: formula  $\rightarrow$  *Measuring range for gases*,  $\stackrel{\triangle}{=}$  82
- To calculate the flow limit, use the *Applicator* sizing tool  $\rightarrow$  *Service-specific accessory*,  $\stackrel{\triangle}{=}$  129

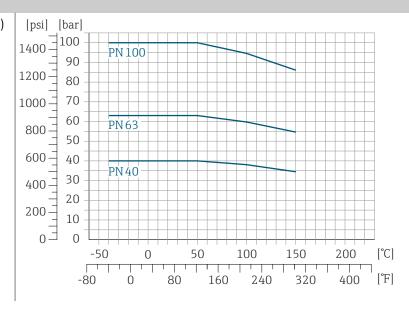

## **Pressure-temperature ratings**

Maximum permitted medium pressure as a function of the medium temperature.

The data relate to all pressure bearing parts of the device.

## Flange according to EN 1092-1

A0032218-EN

### Tri-Clamp

The clamp connections are suitable up to a maximum pressure of 16 bar (232 psi). Please observe the operating limits of the clamp and seal used as they can be over 16 bar (232 psi). The clamp and seal are not included in the scope of supply.

## Sensor housing

The sensor housing is filled with dry nitrogen gas and protects the electronics and mechanics inside.

If a measuring pipe fails, e.g. due to process characteristics like corrosive or abrasive media, the medium will be contained by the sensor housing.

If a measuring pipe fails, the pressure level inside the sensor housing will rise according to the operating pressure. If the user judges that the sensor housing burst pressure does not provide an adequate safety margin, the device can be fitted with a rupture disk. The rupture disk prevents excessively high pressure from forming inside the sensor housing. The rupture disk is urgently recommended in the following applications:

- For high gas pressures
- Process pressure is higher than 2/3 of the burst pressure of the sensor housing.

#### Sensor housing burst pressure

If the device is fitted with a rupture disk (order code for "Sensor option", option CA "Rupture disk"), the rupture disk trigger pressure is decisive .

The sensor housing burst pressure refers to a typical internal pressure which is reached prior to mechanical failure of the sensor housing and which was determined during type testing. The corresponding type test declaration can be ordered with the device (order code for "Additional approval", option LN "Sensor housing burst pressure, type test").

DN		Sensor housing burst pressure		
[mm]	[in]	[bar]	[psi]	
8	3/8	250	3 620	
15	1/2	250	3 620

Electromagnetic compatibility and radio spectrum matters (ERM).

# **Application packages**

## Use

Many different application packages are available to enhance the functionality of the device. Such packages might be needed to address safety aspects or specific application requirements.

The application packages can be ordered with the device or subsequently from Endress+Hauser. Detailed information on the relevant order code is available from your local Endress+Hauser sales organization or on the product page of the Endress+Hauser website: www.endress.com.

## **Heartbeat Verification + Monitoring**

#### **Heartbeat Verification**

Availability depends on the product structure.

Meets the requirement for traceable verification to DIN ISO 9001:2008 Chapter 7.6 a) "Control of monitoring and measuring equipment":

- Functional testing in the installed state without interrupting the process.
- Traceable verification results on request, including a report.
- Simple testing process with local operation or other operating interfaces.
- Clear measuring point assessment (pass/fail) with high test coverage within the framework of manufacturer specifications.
- Extension of calibration intervals according to operator's risk assessment.

#### **Heartbeat Monitoring**

Availability depends on the product structure.

Heartbeat Monitoring continuously supplies data, which are characteristic of the measuring principle, to an external condition monitoring system for the purpose of preventive maintenance or process analysis. These data enable the operator to:

- Draw conclusions using these data and other information about the impact the process influences, e.g. corrosion, abrasion, formation of buildup, have on the measuring performance over time.
- Schedule servicing in time.
- Monitor the process quality or product quality, e.g. gas pockets.

## **Density output**

Many applications use density as a key measured value for monitoring quality or controlling processes. The device measures the density of the medium and makes this value available to the control system.

With this application package, the density can be assigned as a process variable and displayed.

# Fixed flange

## Flange according to ASME B16.5: Class 150

Order code for "Process connection", option AAS

1.4404 (F316/F316L)

DN  $\frac{3}{8}$ " with DN  $\frac{1}{2}$ " flanges as standard

Surface roughness (flange): Ra 12.5 to 492 µin

DN [in]	A [in]	B [in]	C [in]	D [in]	E [in]	L [in]
3/8	3.54	2.37	4 × Ø0.62	0.44	0.62	9.13
1/2	3.54	2.37	4 × Ø0.62	0.44	0.62	10.98
1	4.33	3.13	4 × Ø0.62	0.56	1.05	12.95
11/2	4.92	3.87	4 × Ø0.62	0.69	1.61	17.52
2	5.91	4.75	4 × Ø0.75	0.75	2.07	21.89
3	7.48	6	4 × Ø0.75	0.94	3.07	24.06

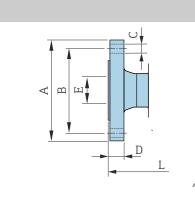

#### Flange according to ASME B16.5: Class 300

Order code for "Process connection", option ABS

1.4404 (F316/F316L)

DN  $\frac{3}{8}$ " with DN  $\frac{1}{2}$ " flanges as standard

Surface roughness (flange): Ra 12.5 to 492 µin

DN [in]	A [in]	B [in]	C [in]	D [in]	E [in]	L [in]
3/8	3.74	2.63	4 × Ø0.62	0.56	0.62	9.13
1/2	3.74	2.63	4 × Ø0.62	0.56	0.62	10.98
1	4.92	3.5	4 × Ø0.75	0.69	1.05	12.95
11/2	6.1	4.5	4 × Ø0.88	0.81	1.61	17.52
2	6.5	5	8 × Ø0.75	0.88	2.07	21.89
3	8.27	6.63	8 × Ø0.88	1.12	3.07	24.06

# **Clamp connections**

## **Tri-Clamp**

Order code for "Process connection", option FTS  $\,$ 

1.4404 (316/316L)

Suitable for pipe according to DIN 11866 series C

Surface roughness:  $Ra_{max} = 30 \mu in$ 

	DN [in]	Clamp [in]	A [in]	B [in]	L [in]
<b>A</b>	3/8	1	1.98	0.87	9.02
d M M	1/2	1	1.98	0.87	10.75
<u> </u>	1	1	1.98	0.87	12.76
<u> </u>	1½	1½	1.98	1.37	17.95
<u>L</u>	2	2	2.52	1.87	22.13
A004317	3	3	3.58	2.87	26.42

# **Couplings**

#### Thread as per SMS 1145

Order code for "Process connection", option SCS

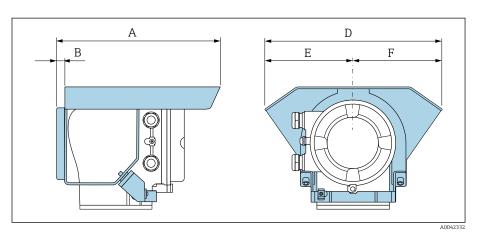

1.4404 (316/316L)

Surface roughness:  $Ra_{max} = 30 \mu in$ 

		DN [in]	A [in]	B [in]	L [in]
		3/8	Rd 40 × ½	0.89	9.02
		1/2	Rd 40 × <sup>1</sup> / <sub>6</sub>	0.89	10.75
		1	Rd 40 × <sup>1</sup> / <sub>6</sub>	0.89	12.76
		1½	Rd 60 × ½	1.4	17.95
	L	2	Rd $70 \times \frac{1}{6}$	1.91	22.13
	A0043257	3	Rd 98 × ½	2.87	26.42

## Transmitter

Accessories	Description	Order number
Proline 10 transmitter	Installation Instructions EA01350D	8XBBXX-**
Protective cover	Protects the device from weather exposure:	71502730
	Installation Instructions EA01351D	

## Sensor

Accessories	Description
Heating jacket	The heating jacket is used to stabilize the temperature of the media in the sensor. Water, water vapor and other non-corrosive liquids are permitted for use as media.
	If using oil as a heating medium, please consult with an Endress+Hauser service organization.
	Heating jackets cannot be used with sensors fitted with a rupture disk.
	<ul> <li>If ordering with the device: order code for "Accessory enclosed"</li> <li>Option RB "Heating jacket, G 1/2" female thread"</li> <li>Option RC "Heating jacket, G 3/4" female thread"</li> <li>Option RD "Heating jacket, NPT 1/2" female thread"</li> <li>Option RE "Heating jacket, NPT 3/4" female thread"</li> <li>If ordering subsequently: use the order code with the product root DK8003.</li> </ul>
	Special Documentation SD02695D

Proline Promass K 10 HART Accessories

# Communication-specific accessories

Accessories	Description
Commubox FXA195 USB/HART modem	Intrinsically safe HART communication with FieldCare and FieldXpert  Technical Information TI00404F
Commubox FXA291	Connects the Endress+Hauser devices with the CDI interface (= Endress+Hauser Common Data Interface) to the USB interface of a personal computer or laptop.  Technical Information TI405C/07
HART Loop Converter HMX50	Is used to evaluate and convert dynamic HART process variables to analog current signals or limit values.  Technical Information TI00429F Operating Instructions BA00371F
Fieldgate FXA42	Transmission of measured values from connected 4 to 20 mA analog and digital devices.  Technical Information TI01297S  Operating Instructions BA01778S  Product page: www.endress.com/fxa42
Field Xpert SMT70	Tablet PC for the configuration of the device. Enables mobile Plant Asset Management to manage the devices with a digital communication interface. Suitable for Zone 2.  Technical Information TI01342S  Operating Instructions BA01709S  Product page: www.endress.com/smt70
Field Xpert SMT77	Tablet PC for the configuration of the device. Enables mobile Plant Asset Management to manage the devices with a digital communication interface. Suitable for Zone 1.  Technical Information TI01418S Operating Instructions BA01923S Product page: www.endress.com/smt77

# Service-specific accessory

# **System components**

Accessories	Description
Memograph M	Graphic data manager:  Record measured values  Monitor limit values  Analyze measuring points  Technical Information TI00133R  Operating Instructions BA00247R
iTEMP	Temperature transmitter:  • Measure the absolute pressure and gauge pressure of gases, vapors and liquids  • Read the medium temperature    Fields of Activity" document FA00006T
Cerabar M	Pressure device:  Measure the absolute pressure and gauge pressure of gases, vapors and liquids  Read the operating pressure value  Technical Information TI00426P and TI00436P  Operating Instructions BA00200P and BA00382P
Cerabar S	Pressure device:  Measure the absolute pressure and gauge pressure of gases, vapors and liquids  Read the operating pressure value  Technical Information TI00383P  Operating Instructions BA00271P

Proline Promass K 10 HART Appendix

# 17 Appendix

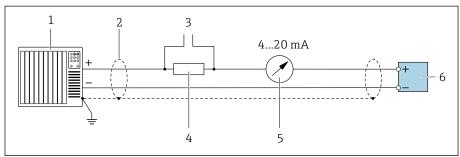

**Examples for electric terminals**

Appendix Proline Promass K 10 HART

# **Examples for electric terminals**

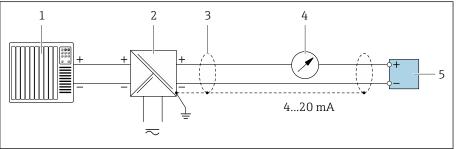

## Current output 4 to 20 mA HART (active)

A002905

- 1 Automation system with current input, e.g. PLC
- 2 Cable shield
- 3 Connection for HART operating devices
- 4 Resistor for HART communication ( $\geq 250 \Omega$ ): observe max. load.
- 5 Analog display unit: observe max. load.
- 6 Transmitter

#### Current output 4 to 20 mA HART (passive)

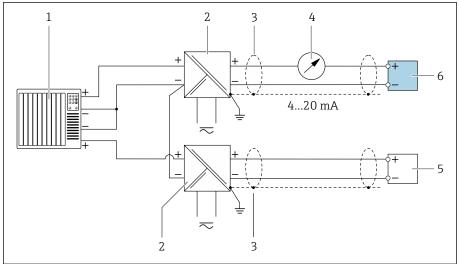

A00287

- 1 Automation system with current input, e.g. PLC
- 2 Active barrier for supply voltage, e.g. RN221N
- 3 Cable shield
- 4 Analog display unit: observe max. load.
- 5 Transmitter

132

Proline Promass K 10 HART Appendix

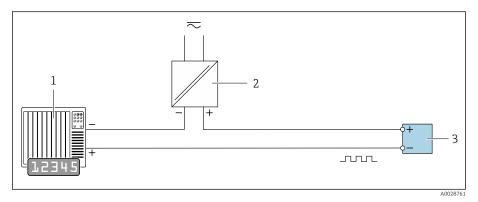

## **HART input (passive)**

A0020762

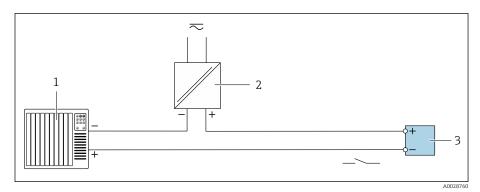

- 7 Connection example for HART input with a common negative (passive)
- 1 Automation system with current input, e.g. PLC
- 2 Active barrier for supply voltage, e.g. RN221N
- 3 Cable shield
- 4 Analog display unit: observe max. load.
- 5 Pressure measuring device, e.g. Cerabar M, Cerabar S: observe requirements
- 6 Transmitter

## Pulse/frequency output (passive)

- 1 Automation system with pulse output and frequency input, e.g. PLC
- 2 Supply voltage
- 3 Transmitter: observe input values.

# Switch output (passive)

- $Automation\ system\ with\ switch\ input,\ e.g.\ PLC$
- 1 2 3 Supply voltage Transmitter: observe input values.
