MadgeTech's EggTemp is specifically designed to measure and record the temperature of eggs during shipping, storage and incubation. The logger thermally responds to an environment the same way a real egg does, simulating the temperature experience of the actual product.
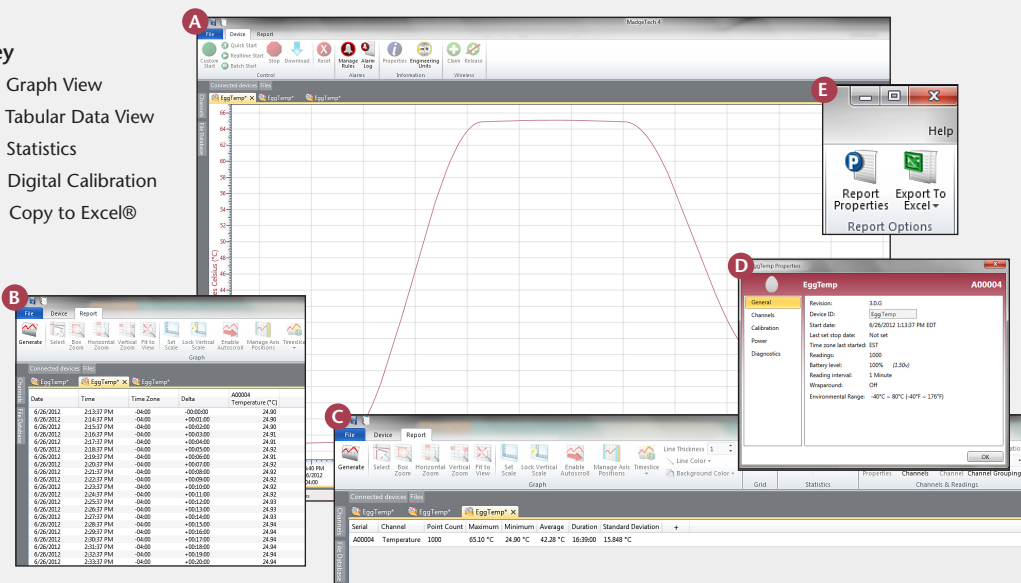

The EggTemp is submersible and can measure temperatures up to +60 °C. It has a user replaceable battery, that typically lasts up to 1 year. The nonvolatile memory can hold up to 32,767 readings and will retain data even if the battery becomes discharged.

MadgeTech's data logger software offers an easy way to analyze data. Data can be viewed in Celsius or Fahrenheit, and in graph, summary or data formats. For further analysis data can also be exported to Excel.
