PRINCIPLES

The wall-mounted or bench-top CO_2 display evaluates the quality of air with a combined measurement of CO_2, humidity and temperature. A high concentration of carbon dioxide can develop quickly when closed rooms with deficient ventilation are filled with people. Carbon dioxide (CO_2) is a colorless and odorless gas that exists in the earth's atmosphere and which is dangerous in high concentrations. The proportion of CO_2 in natural ambient air is about 0.04 % or 400 ppm. When humans and animals exhale this gas, it mixes quickly with the ambient air. A high CO_2 content becomes apparent in humans through rapid fatigue and loss of concentration. The negative effects become noticeable that more quickly in small rooms in which there are many people (e.g. conference rooms). In order to initiate suitable countermeasures such as an increase in the supply of fresh air, it is important to measure not only parameters such as relative humidity and temperature, but also the CO_2 content.

Guidelines

350 - 450 ppm 0.035 - 0.045 %vol	600 - 1,200 ppm 0.06 - 0.12 %vol	› 1,000 ppm › 0.1 %vol	5,000 ppm 0.5 %vol	38,000 ppm 3.8 %vol	› 100,000 ppm 10 %vol
Fresh air outdoors	Room air	Fatigue and loss of concentration become apparent	Maximum permissible value at the workplace during an 8-hour workday	Breathing air (direct exhalation)	Nausea, vomiting, loss of consciousness and death
