

WirelessHart® Provisioning App

- Commission WirelessHART devices in a fraction of the time
- Read and write device tags from same easy app
- Eliminate repetition and transcription error

Easily provision multiple devices in a fraction of the time.

Introduction

The WirelessHART® Provisioning app allows you to provision WirelessHART networks in less time, with less chance of error and in a more secure fashion. The app eliminates the need to open each device description, allowing you to enter the network ID and Joinkey once per network instead of for every device. Then, configure hundreds of devices with a push of a button, improving accuracy and allowing you to provision an entire network up to 6x faster.

Setting Up a Network

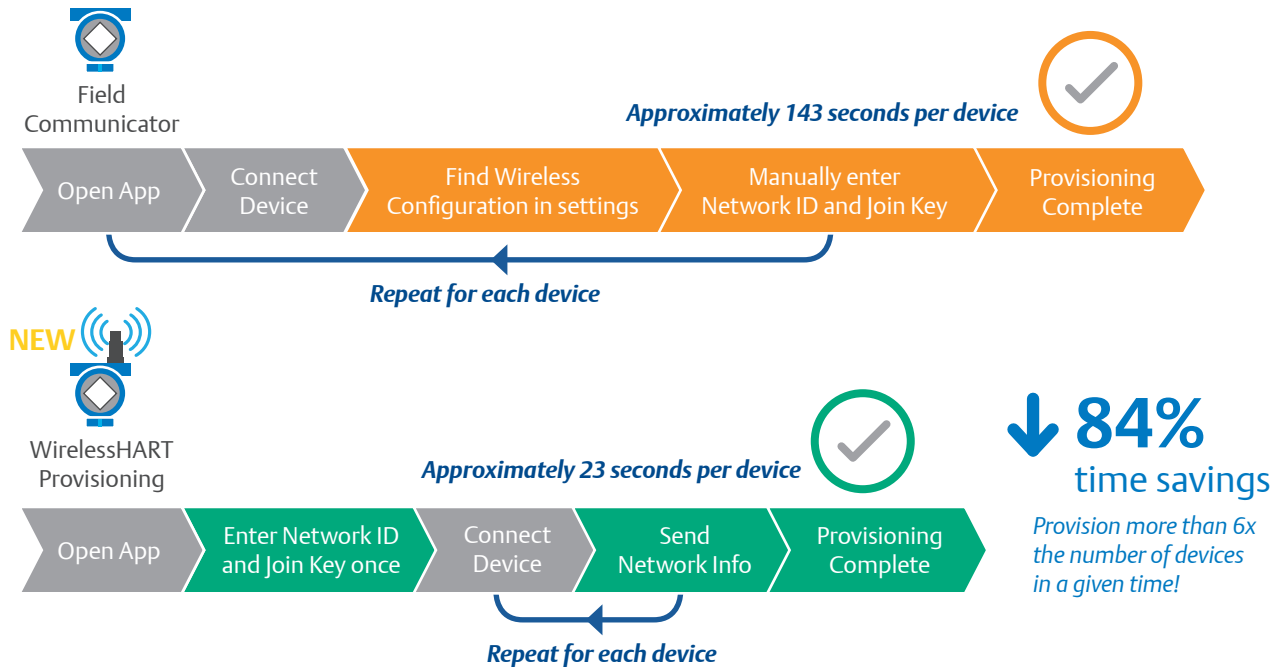

Provisioning wireless devices can be a tedious, repetitive process that is prone to errors if you don't have the right tools. While provisioning is required for a device to securely join the network, the process involves manually entering a 5-character network ID and a 32-character joinkey – for every device. This process can take minutes per device.

Using the WirelessHART Provisioning app for the AMS Trex Device Communicator, enter the network ID and joinkey before you go to the field, then connect to each device, and press send. With the app, this process takes only seconds per device.

Ordering Information

Description	Part Number
WirelessHART Provisioning App	TREX-APWP-PE01

Notes: 1) You must include the corresponding AMS Trex unit serial number(s) at time of order.
 2) Once purchased, you can download the app from Upgrade Studio.
