Table of contents

1 Wichtige Hinweise zum Dokument

1.1 Document function

These Operating Instructions contain all the information that is required in various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.

1.2 Symbols

1.2.1 Safety symbols
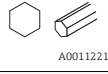

Symbol	Meaning
⚠ DANGER	**DANGER!** This symbol alerts you to a dangerous situation. Failure to avoid this situation will result in serious or fatal injury.
⚠ WARNING	**WARNING!** This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.
⚠ CAUTION	**CAUTION!** This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in minor or medium injury.
NOTICE	**NOTE!** This symbol contains information on procedures and other facts which do not result in personal injury.

1.2.2 Electrical symbols

Symbol	Meaning
⎓	Direct current
∼	Alternating current
⍼	Direct current and alternating current
⏚	**Ground connection** A grounded terminal which, as far as the operator is concerned, is grounded via a grounding system.
⏦	**Protective Earth (PE)** A terminal which must be connected to ground prior to establishing any other connections. The ground terminals are situated inside and outside the device: • Inner ground terminal: Connects the protectiv earth to the mains supply. • Outer ground terminal: Connects the device to the plant grounding system.

1.2.3 Tool symbols
Symbol	Meaning
A0013442	Torx screwdriver
A0011220	Flat blade screwdriver

Symbol	Meaning
A0011219	Cross-head screwdriver
A0011221	Allen key
A0011222	Hexagon wrench
1.2.4 Symbols for certain types of information

Symbol	Meaning
	Permitted Procedures, processes or actions that are permitted.
	Preferred Procedures, processes or actions that are preferred.
	Forbidden Procedures, processes or actions that are forbidden.
	Tip Indicates additional information.
	Reference to documentation.
	Reference to page.
	Reference to graphic.
▶	Notice or individual step to be observed.
1., 2., 3...	Series of steps.
↳	Result of a step.
?	Help in the event of a problem.
	Visual inspection.

1.2.5 Symbols in graphics

Symbol	Meaning
1, 2, 3 ...	Item numbers
1., 2., 3...	Series of steps
A, B, C, ...	Views
A-A, B-B, C-C, ...	Sections
	Hazardous area Indicates a hazardous area.
	Safe area (non-hazardous area) Indicates the non-hazardous area.

1.2.6 Symbols at the device

Symbol	Meaning
⚠ → 📖	**Safety instructions** Observe the safety instructions contained in the associated Operating Instructions.
🔌	**Temperature resistance of the connection cables** Specifies the minimum value of the temperature resistance of the connection cables.

1.3 Additional documentation

Document	Purpose and content of the document
Technical Information TI01042F (FMR56, FMR57)	**Planning aid for your device** The document contains all the technical data on the device and provides an overview of the accessories and other products that can be ordered for the device.
Brief Operating Instructions KA01131F (FMR56/FMR57, PROFIBUS PA)	**Guide that takes you quickly to the 1st measured value** The Brief Operating Instructions contain all the essential information from incoming acceptance to initial commissioning.
Description of Device Parameters GP01018F (FMR5x, PROFIBUS PA)	**Reference for your parameters** The document provides a detailed explanation of each individual parameter in the operating menu. The description is aimed at those who work with the device over the entire life cycle and perform specific configurations.
Special documentation SD01087F	**Functional Safety Manual** The document is part of the Operating Instructions and serves as a reference for application-specific parameters and notes.
Special documentation SD01870F	**Manual for Heartbeat Verification and Heartbeat Monitoring** The document contains descriptions of the additonal parameters and technical data which are available with the **Heartbeat Verification** and **Heartbeat Monitoring** application packages.

ℹ️ For an overview of the scope of the associated Technical Documentation, refer to the following:
- The *W@M Device Viewer* : Enter the serial number from the nameplate (www.endress.com/deviceviewer)
- The *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the 2-D matrix code (QR code) on the nameplate.

1.4 Terms and abbreviations

Term/abbreviation	Explanation
BA	Document type "Operating Instructions"
KA	Document type "Brief Operating Instructions"
TI	Document type "Technical Information"
SD	Document type "Special Documentation"
XA	Document type "Safety Instructions"
PN	Nominal pressure
MWP	Maximum Working Pressure The MWP can also be found on the nameplate.
ToF	Time of Flight
FieldCare	Scalable software tool for device configuration and integrated plant asset management solutions
DeviceCare	Universal configuration software for Endress+Hauser HART, PROFIBUS, FOUNDATION Fieldbus and Ethernet field devices
DTM	Device Type Manager
DD	Device Description for HART communication protocol
ε_r (DC value)	Relative dielectric constant
Operating tool	The term "operating tool" is used in place of the following operating software: • FieldCare / DeviceCare, for operation via HART communication and PC • SmartBlue (app), for operation using an Android or iOS smartphone or tablet.
BD	Blocking Distance; no signals are analyzed within the BD.
PLC	Programmable Logic Controller
CDI	Common Data Interface
PFS	Pulse Frequence Status (Switching output)

1.5   Registered trademarks

PROFIBUS®
Registered trademark of the PROFIBUS User Organization, Karlsruhe, Germany

Bluetooth®
The Bluetooth® word mark and logos are registered trademarks owned by the Bluetooth SIG, Inc. and any use of such marks by Endress+Hauser is under license. Other trademarks and trade names are those of their respective owners.

Apple®
Apple, the Apple logo, iPhone, and iPod touch are trademarks of Apple Inc., registered in the U.S.and other countries. App Store is a service mark of Apple Inc.

Android®
Android, Google Play and the Google Play logo are trademarks of Google Inc.

KALREZ®, VITON®
Registered trademark of DuPont Performance Elastomers L.L.C., Wilmington, USA

TEFLON®
Registered trademark of E.I. DuPont de Nemours & Co., Wilmington, USA

TRI CLAMP®
Registered trademark of Alfa Laval Inc., Kenosha, USA

2 Basic safety instructions

2.1 Requirements for the personnel

The personnel for installation, commissioning, diagnostics and maintenance must fulfill the following requirements:
▸ Trained, qualified specialists must have a relevant qualification for this specific function and task.
▸ Are authorized by the plant owner/operator.
▸ Are familiar with federal/national regulations.
▸ Before starting work, read and understand the instructions in the manual and supplementary documentation as well as the certificates (depending on the application).
▸ Follow instructions and comply with basic conditions.

The operating personnel must fulfill the following requirements:
▸ Are instructed and authorized according to the requirements of the task by the facility's owner-operator.
▸ Follow the instructions in this manual.

2.2 Designated use

Application and measured materials
The measuring device described in these Operating Instructions is intended for the continuous, contactless level measurement of mainly bulk solids. The device can also be freely mounted outside closed metal vessels (e.g. above basins, open channels or open piles) because of its operating frequency of about 26 GHz, a maximum radiated pulsed power of 23.3 mW and an average power output of 0.076 mW. Operation is completely harmless to humans and animals.

Observing the limit values specified in the "Technical data" and listed in the Operating Instructions and supplementary documentation, the measuring device may be used for the following measurements only:
▸ Measured process variables: level, distance, signal strength
▸ Calculated process variables: Volume or mass in arbitrarily shaped vessels; flow through measuring weirs or flumes (calculated from the level by the linearization functionality)

To ensure that the measuring device remains in proper condition for the operation time:
▸ Use the measuring device only for measured materials against which the process-wetted materials are adequately resistant.
▸ Observe the limit values in "Technical data".

Incorrect use
The manufacturer is not liable for damage caused by improper or non-designated use.

Verification for borderline cases:
▸ For special measured materials and cleaning agents, Endress+Hauser is glad to provide assistance in verifying the corrosion resistance of wetted materials, but does not accept any warranty or liability.

Residual risk
The electronics housing and its built-in components such as display module, main electronics module and I/O electronics module may heat to 80 °C (176 °F) during operation through heat transfer from the process as well as power dissipation within the electronics. During operation the sensor may assume a temperature near the temperature of the measured material.

Danger of burns due to heated surfaces!
▸ For high process temperatures: Install protection against contact in order to prevent burns.

2.3 Workplace safety

For work on and with the device:
▸ Wear the required personal protective equipment according to federal/national regulations.

2.4 Operational safety

Risk of injury.
▸ Operate the device in proper technical condition and fail-safe condition only.
▸ The operator is responsible for interference-free operation of the device.

Conversions to the device

Unauthorized modifications to the device are not permitted and can lead to unforeseeable dangers.
▸ If, despite this, modifications are required, consult with the manufacturer.

Repair

To ensure continued operational safety and reliability,
▸ Carry out repairs on the device only if they are expressly permitted.
▸ Observe federal/national regulations pertaining to repair of an electrical device.
▸ Use original spare parts and accessories from the manufacturer only.

Hazardous area

To eliminate a danger for persons or for the facility when the device is used in the hazardous area (e.g. explosion protection, pressure vessel safety):
▸ Based on the nameplate, check whether the ordered device is permitted for the intended use in the hazardous area.
▸ Observe the specifications in the separate supplementary documentation that is an integral part of these Instructions.

2.5 Product safety

This measuring device is designed in accordance with good engineering practice to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate. It meets general safety standards and legal requirements.

NOTICE

Loss of degree of protection by opening of the device in humid environments
▸ If the device is opened in a humid environment, the degree of protection indicated on the nameplate is no longer valid. This may also impair the safe operation of the device.

2.5.1 CE mark

The measuring system meets the legal requirements of the applicable EC guidelines. These are listed in the corresponding EC Declaration of Conformity together with the standards applied.

Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

2.5.2   EAC conformity

The measuring system meets the legal requirements of the applicable EAC guidelines. These are listed in the corresponding EAC Declaration of Conformity together with the standards applied.

Endress+Hauser confirms successful testing of the device by affixing to it the EAC mark.

2.6   Safety Instructions (XA)

Depending on the approval, the following Safety Instructions (XA) are supplied with the device. They are an integral part of the Operating Instructions.

Feature 010	Approval	Available for	Feature 020 "Power Supply; Output"

4 Incoming acceptance and product identification

4.1 Incoming acceptance

Upon receipt of the goods check the following:
- Are the order codes on the delivery note and the product sticker identical?
- Are the goods undamaged?
- Do the nameplate data match the ordering information on the delivery note?
- Is the DVD with the operating tool present?
  If required (see nameplate): Are the Safety Instructions (XA) present?

If one of these conditions is not satisfied, contact your Endress+Hauser Sales Center.

4.2 Product identification

The following options are available for identification of the measuring device:
- Nameplate specifications
- Extended order code with breakdown of the device features on the delivery note
- Enter serial numbers from nameplates in *W@M Device Viewer*
  (www.endress.com/deviceviewer): All information about the measuring device is displayed.
- Enter the serial number from the nameplates into the *Endress+Hauser Operations App* or scan the 2-D matrix code (QR code) on the nameplate with the *Endress+Hauser Operations App*: all the information for the measuring device is displayed.

For an overview of the scope of the associated Technical Documentation, refer to the following:
- The *W@M Device Viewer*: Enter the serial number from the nameplate (www.endress.com/deviceviewer)
- The *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the 2-D matrix code (QR code) on the nameplate.

21   Material in contact with process
22   Permitted ambient temperature (T_a)
23   Size of the thread of the cable glands
24   Maximum process temperature
25   Signal outputs
26   Operating voltage

ℹ️ Only 33 digits of the extended order code can be indicated on the nameplate. If the extended order code exceeds 33 digits, the rest will not be shown. However, the complete extended order code can be viewed in the operating menu of the device: **Extended order code 1 to 3** parameter

5 Storage, Transport

5.1 Storage conditions

- Permitted storage temperature: −40 to +80 ℃ (−40 to +176 ℉)
- Use the original packaging.

5.2 Transport product to the measuring point

NOTICE

Housing or antenna horn may be damaged or break away.
Risk of injury!
- ▸ Transport the measuring device to the measuring point in its original packaging or at the process connection.
- ▸ Do not fasten lifting devices (hoisting slings, lifting eyes etc.) at the housing or the antenna horn but at the process connection. Take into account the mass center of the device in order to avoid unintended tilting.
- ▸ Comply with the safety instructions, transport conditions for devices over 18kg (39.6lbs) (IEC61010).

A0016875

6   Installation

6.1   Installation conditions

6.1.1   Mounting position

A0016883
- Recommended distance **A** from wall to outer edge of nozzle: ~ 1/6 of vessel diameter.
  Nevertheless the device should not be installed closer than 20 cm (7.87 in) to the vessel wall.
  If the wall of the vessel is not smooth (corrugated metal, welding seams, irregularities etc.) the distance from the wall should be kept as large as possible. If necessary, use an alignment device to prevent interference reflections from the wall (Verweisziel existiert nicht, aber @y.link.required='true').
- Not in the center (2), as interference can cause signal loss.
- Not above the fill stream (3).
- It is recommended to us a weather protection cover (1) in order to protect the device from direct sun or rain.
- In extremely dusty applications, the integrated air purge connection can prevent clogging of the antenna (Verweisziel existiert nicht, aber @y.link.required='true').

6.1.2   Vessel installations
Avoid any installations (limit switches, temperature sensors, braces etc.) inside the signal beam. Take into account the beam angle .
6.1.3   Reduction of interference echoes

A0016889
Metallic screens mounted at a slope spread the radar signal and can, therefore, reduce interference echoes.

6.1.4   Measurement in a plastic vessel

If the outer wall of the vessel is made of a non-conductive material (e.g. GRP), microwaves can also be reflected off interfering installations outside the vessel (e.g. metallic pipes (1), ladders (2), grates (3), ...). Therefore, there should be no such interfering installations in the signal beam. Please contact Endress+Hauser for further information.

A0017125

6.1.5   Optimization options

- Antenna size
  The bigger the antenna, the smaller the beam angle α and the fewer interference echoes
  → 🖺 24.
- Mapping
  The measurement can be optimized by means of electronic suppression of interference
  echoes.
  See the **Confirm distance** parameter (→ 🖺 113) for details.
- Antenna alignment
  Take into account the marker on the flange or threaded connection .
- Metallic screens mounted at a slope
  They spread the radar signals and can, therefore, reduce interference echoes.
- Variable flange seal (FMR56)
  Using the variable flange seal, the device can be aligned in the direction of the product
  surface. For details refer to Operating Instructions BA01048F, chapter "Accessories".
- Alignment device for FMR57
  In FMR57 with alignment device, the sensor can be optimally aimed within the vessel
  and thus interference echoes can be avoided. The maximum angle β is ±15˚.
  In particular, sensor alignment serves to:
  – prevent interference reflections
  – extend the maximum possible measuring range in conical outlets

6.1.6 Beam angle

$$W = 2 \cdot D \cdot \tan\frac{\alpha}{2}$$
⊠ 5   Relationship between beam angle α, distance D and beamwidth diameter W

The beam angle is defined as the angle α where the energy density of the radar waves reaches half the value of the maximum energy density (3-dB-width). Microwaves are also emitted outside the signal beam and can be reflected off interfering installations.

Beam diameter **W** as a function of beam angle **α** and measuring distance **D**:

FMR56		
Antenna size	80 mm (3 in)	100 mm (4 in)
Beam angle α	10°	8°
Measuring distance (D)	Beamwidth diameter (W)	
3 m (9.8 ft)	0.53 m (1.7 ft)	0.42 m (1.4 ft)
6 m (20 ft)	1.05 m (3.4 ft)	0.84 m (2.8 ft)
9 m (30 ft)	1.58 m (5.2 ft)	1.26 m (4.1 ft)
12 m (39 ft)	2.1 m (6.9 ft)	1.68 m (5.5 ft)
15 m (49 ft)	2.63 m (8.6 ft)	2.10 m (6.9 ft)
20 m (66 ft)	3.50 m (11 ft)	2.80 m (9.2 ft)
25 m (82 ft)	4.37 m (14 ft)	3.50 m (11 ft)
30 m (98 ft)	5.25 m (17 ft)	4.20 m (14 ft)

FMR57 - Horn antenna		
Antenna size	80 mm (3 in)	100 mm (4 in)
Beam angle α	10°	8°
Measuring distance (D)	Beamwidth diameter W	
5 m (16 ft)	0.87 m (2.9 ft)	0.7 m (2.3 ft)
10 m (33 ft)	1.75 m (5.7 ft)	1.4 m (4.6 ft)
15 m (49 ft)	2.62 m (8.6 ft)	2.1 m (6.9 ft)
20 m (66 ft)	3.50 m (11 ft)	2.80 m (9.2 ft)
30 m (98 ft)	5.25 m (17 ft)	4.20 m (14 ft)
40 m (131 ft)	7.00 m (23 ft)	5.59 m (18 ft)
50 m (164 ft)	8.75 m (29 ft)	6.99 m (23 ft)

FMR57 - Parabolic antenna		
Antenna size	200 mm (8 in)	250 mm (10 in)
Beam angle α	4°	3,5°
Measuring distance (D)	Beamwidth diameter W	
5 m (16 ft)	0.35 m (1.1 ft)	0.30 m (1 ft)
10 m (33 ft)	0.70 m (2.3 ft)	0.61 m (2 ft)
15 m (49 ft)	1.05 m (3.4 ft)	0.92 m (3 ft)
20 m (66 ft)	1.40 m (4.6 ft)	1.22 m (4 ft)
30 m (98 ft)	2.10 m (6.9 ft)	1.83 m (6 ft)
40 m (131 ft)	2.79 m (9.2 ft)	2.44 m (8 ft)
50 m (164 ft)	3.50 m (11 ft)	3.06 m (10 ft)
60 m (197 ft)	4.19 m (14 ft)	3.70 m (12 ft)
70 m (230 ft)	4.90 m (16 ft)	4.28 m (14 ft)

6.2   Measuring conditions

- The measuring range begins, where the beam hits the bottom. Particularly with conical outlets the level cannot be detected below this point. The maximum measuring range can be increased in such applications by using an alignment device .
- In case of media with a low dielectric constant (ε_r = 1.5 to 2.5) [2], the bottom can be visible through the medium at low levels. In order to guarantee the required accuracy in these cases, it is recommended to position the zero-point at a distance **C** above the bottom (see figure).
- In principle it is possible to measure up to the tip of the antenna with Micropilot. However, due to considerations regarding abrasion and build-up and depending on the orientation of the product surface (angle of repose), the end of the measuring range should be at a distance of **A** (see figure) from the tip of the antenna. If required, and if some conditions (high DC value, flat angle of repose) are met, shorter distances can be achieved.

---

2)   Dielectric constants of important media commonly used in various industries are summarized in the DC manual (CP01076F) and in the Endress +Hauser "DC Values App" (available for Android and iOS).
A0016916

Device	A [mm (in)]	C [mm (in)]
FMR56	400(15.7)	50 to 150(1.97 to 5.91)
FMR57		

6.3 Installation in vessel (free space)

6.3.1 Horn antenna with slip-on flange (FMR56)

Alignment

ℹ When using the Micropilot with a slip-on flange in explosion-hazardous areas, strictly observe all specifications in the relevant Safety Instructions (XA).

- Align the antenna vertically to the product surface.
  Optionally, a variable flange seal, which is available as an accessory, can be used for alignment (see Technical Information BA01048F, chapter "Accessories").
- A marking at the boss enables alignment of the antenna. This marking must be aligned towards the tank wall as well as possible.
A0019434

Depending on the device version the marking may be a circle or two short parallel lines.
Nozzle mounting

A0016868

🖾 *6   Nozzle height and diameter for horn antenna with slip-on flange*

Nozzle diameter D	Maximum nozzle height H_{max}
80 mm (3 in)	300 mm (11.8 in)
100 mm (4 in)	400 mm (15.8 in)
150 mm (6 in)	500 mm (19.7 in)

6.3.2   Horn antenna with mounting bracket (FMR56)
⊡ 7   *Installation of the horn antenna with mounting bracket*

Align the antenna vertically to the product surface using the mounting bracket.

> **NOTICE**
>
> **The mounting bracket has no conductive connection to the transmitter housing.**
> Danger of electrostatic charge
> ▸ Connect the mounting bracket to the local potential equalization system.

6.3.3   Horn antenna (FMR57)

Alignment

• Ideally, the horn antenna should be installed vertically. To avoid interference reflections or for optimum alignment within the vessel, the Micropilot with optional alignment device can be inclined by 15˚ in all directions .
• A marking at the boss enables alignment of the antenna. This marking must be aligned towards the tank wall as well as possible.

ℹ Depending on the device version the marking may be a circle or two short parallel lines.

Nozzle mounting

The horn antenna should protrude from the nozzle. If this is not possible for mechanical reasons, larger nozzle heights can be accepted.
🖼 8   Nozzle height for the horn antenna (FMR57)

Antenna [1]	Maximum nozzle height H_{max} [2]
BC: Horn 80mm/3"	260 mm (10.2 in)
BD: Horn 100mm/4"	480 mm (18.9 in)

1)   Feature 070 of the product structure
2)   valid for antennas without antenna extension

Please contact Endress+Hauser for applications with higher nozzle.

Threaded connection

For devices with a threaded connection it may be necessary - depending on the antenna size - to unmount the horn before fastening the device and to mount it again afterwards.

- Tighten with the hexagonal nut only.
- Tool : 60 mm hexagonal wrench
- Maximum permissible torque: 60 Nm (44 lbf ft)

6.3.4   Parabolic antenna (FMR57)

Alignment

Ideally, the parabolic antenna should be installed vertically. To avoid interference reflections or for optimum alignment within the vessel, the Micropilot with optional alignment device can be swiveled by 15˚ in all directions .

Nozzle mounting

- Case 1: Ideally, the parabolic antenna should protrude from the nozzle (1). Particularly when using the alignment device, please ensure that the parabolic reflector is protruding from the nozzle/roof so as not to inhibit alignment.
- Case 2: For applications with higher nozzle it may be necessary to install the parabolic antenna completely in the nozzle (2).
  The maximum height of the nozzle (H_{max}) to the parabolic mirror should not exceed 500 mm (19.7 in). Interfering edges within the nozzle should be avoided.
☑ 9   Nozzle mounting of Micropilot FMR57 with parabolic antenna

1   Antenna protrudes from the nozzle
2   Antenna completely within the nozzle

Antenna [1]	Antenna diameter D	Nozzle height H for case 1	Maximum nozzle height H_{max} for case 2
FA: Parabol 200mm/8"	173 mm (6.81 in)	< 50 mm (1.97 in)	500 mm (19.7 in)
FB: Parabol 250mm/10"	236 mm (9.29 in)	< 50 mm (1.97 in)	500 mm (19.7 in)

1)   Feature 070 of the product structure

Examples for installation with small flange

If the flange is smaller than the parabolic reflector, the device can be mounted in one of the following ways:

- Standard installation (Verweisziel existiert nicht, aber @y.link.required='true')
  This requires dismantling of the parabolic reflector.
- Installation with hinged flange (Verweisziel existiert nicht, aber @y.link.required='true')

Standard installation
1   Nozzle

Antenna size	ΦD	H [1]
200 mm (8 in)	173 mm (6.81 in)	< 50 mm (1.96 in)
250 mm (10 in)	236 mm (9.29 in)	< 50 mm (1.96 in)

1)   without antenna extension

Installation with hinged flange

At hinged flanges, the length of the antenna must be taken into account.
Dismantling the parabolic reflector

For installation in a nozzle, the parabolic reflector can be dismantled:
A0018877

1   Parabolic reflector
2   4 bolts; torque: 3 Nm (2,2 lbf ft)

6.3.5   Alignment device for FMR57

Using the alignment device it is possible to tilt the antenna axis by up to 15° in all directions. The alignment device is used for the optimum alignment of the radar beam with the bulk solids surface.

Product structure: Feature 100 "Process connection", options XCJ, XEJ, XFJ
A0016931

⊡ *10   Micropilot FMR57 with alignment device*

Align antenna axis:

1. Loosen screws.

2. Align antenna axis (up to. ± 15° in all directions).

3. Tighten screws with 15 Nm (11 lbf ft).

6.3.6 Integrated air purge connection for FMR57

In extremely dusty applications, the integrated air purge connection can prevent clogging of the antenna. Pulsed operation is recommended.
🖼 11 *Micropilot FMR57 with air purge connection*

1 Air purge connection NPT¼ or G¼

Pressure range of the purge air
- **Pulsed operation**:
  max. 6 bar (87 psi)
- **Permanent operation**:
  200 to 500 mbar (3 to 7.25 psi)

Connection of the purge air
- Tools:
  – 13mm (G 1/4) open-end wrench
  – 14 mm (NPT) open-end wrench
  – 17 mm (NPT "adapter") open-end wrench
- min. torque: 6 Nm (4.4 lbf ft)
- max. torque: 7 Nm (5.2 lbf ft)

Make sure to use dry purge air.

In general, air purging should only be used as much as necessary, since too much air purging may cause mechanical damage (abrasion).

6.4 Container with heat insulation
If process temperatures are high, the device should be included in the usual container insulation system (2) to prevent the electronics from heating as a result of thermal radiation or convection. The insulation should not be higher than the neck of the device (1).

6.5   Turning the transmitter housing

To provide easier access to the connection compartment or display module, the transmitter housing can be turned:
1. Unscrew the securing screw using an open-ended wrench.

2. Rotate the housing in the desired direction.

3. Tighten the securing screw (1.5 Nm for plastic housing; 2.5 Nm for aluminum or stainless steel housing).

6.6   Turning the display

6.6.1   Opening cover
1. Loosen the screw of the securing clamp of the electronics compartment cover using an Allen key (3 mm) and turn the clamp 90 ˚ counterclockwise.

2. Unscrew cover and check lid gasket, replace if necessary.

6.6.2 Turning the display module
A0036401

1. Pull out the display module with a gentle rotational movement.

2. Rotate the display module to the desired position: max. 8 × 45 ˚ in each direction.

3. Feed the coiled cable into the gap between the housing and main electronics module and plug the display module into the electronics compartment until it engages.

6.6.3 Closing electronics compartment cover
A0021451

1. Screw back firmly electronics compartment cover.

2. Turning securing clamp 90 ˚ clockwise and tighten the clamp with 2.5 Nm using the Allen key (3 mm).

6.7 Post-installation check

❑	Is the device undamaged (visual inspection)?
❑	Does the device conform to the measuring point specifications? For example: • Process temperature • Process pressure (refer to the chapter on "Material load curves" of the "Technical Information" document) • Ambient temperature range • Measuring range
❑	Are the measuring point identification and labeling correct (visual inspection)?
❑	Is the device adequately protected from precipitation and direct sunlight?
❑	Are the securing screw and securing clamp tightened securely?

7   Electrical connection

7.1   Connection conditions

7.1.1   Terminal assignment

Terminal assignment 4-wire: 4-20 mA HART (90 to 253 V$_{AC}$)

A0036519
⊠ *12   Terminal assignment 4-wire: 4-20 mA HART (90 to 253 V$_{AC}$)*

1   Connection 4-20 mA HART (active): terminals 3 and 4
2   Connection supply voltage: terminals 1 and 2
3   Terminal for cable screen

> ⚠ **CAUTION**
>
> **To ensure electrical safety:**
> ▶ Do not disconnect the protective connection.
> ▶ Disconnect the supply voltage before disconnecting the protective earth.

ℹ Connect protective earth to the internal ground terminal (3) before connecting the supply voltage. If necessary, connect the potential matching line to the external ground terminal.

ℹ In order to ensure electromagnetic compatibility (EMC): Do **not** only ground the device via the protective earth conductor of the supply cable. Instead, the functional grounding must also be connected to the process connection (flange or threaded connection) or to the external ground terminal.

ℹ An easily accessible power switch must be installed in the proximity of the device. The power switch must be marked as a disconnector for the device (IEC/EN61010).

Terminal assignment PROFIBUS PA / FOUNDATION Fieldbus
🖾 13   Terminal assignment PROFIBUS PA / FOUNDATION Fieldbus

A   Without integrated overvoltage protection
B   With integrated overvoltage protection
1   Connection PROFIBUS PA / FOUNDATION Fieldbus: terminals 1 and 2, without integrated overvoltage protection
2   Connection switch output (Open Collector): terminals 3 and 4, without integrated overvoltage protection
3   Connection switch output (Open Collector): terminals 3 and 4, with integrated overvoltage protection
4   Connection PROFIBUS PA / FOUNDATION Fieldbus: terminals 1 and 2, with integrated overvoltage protection
5   Terminal for cable screen

🖾 14   Block diagram PROFIBUS PA / FOUNDATION Fieldbus
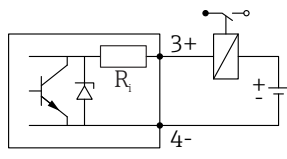

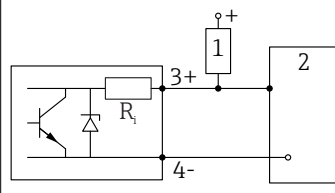

1   Cable screen; observe cable specifications
2   Connection PROFIBUS PA / FOUNDATION Fieldbus
3   Measuring device
4   Switch output (open collector)

Connection examples for the switch output

15   Connection of a relay

Suitable relays (examples):
- Solid-state relay: Phoenix Contact OV-24DC/480AC/5 with mounting rail connector UMK-1 OM-R/AMS
- Electromechanical relay: Phoenix Contact PLC-RSC-12DC/21

16   Connection of a digital input

1   Pull-up resistor
2   Digital input

For optimum interference immunity we recommend to connect an external resistor (internal resistance of the relay or Pull-up resistor) of < 1 000 Ω.

7.1.2   Cable specification

- **Devices without integrated overvoltage protection**
  Pluggable spring-force terminals for wire cross-sections 0.5 to 2.5 mm^2 (20 to 14 AWG)
- **Devices with integrated overvoltage protection**
  Screw terminals for wire cross-sections 0.2 to 2.5 mm^2 (24 to 14 AWG)
- For ambient temperature $T_U \geq 60$ °C (140 °F): use cable for temperature T_U +20 K.

PROFIBUS
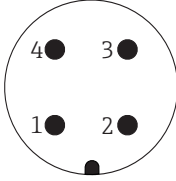

Use a twisted, screened two-wire cable, preferably cable type A.

For further information on the cable specifications, see Operating Instructions BA00034S "PROFIBUS DP/PA: Guidelines for planning and commissioning", PNO Guideline 2.092 "PROFIBUS PA User and Installation Guideline" and IEC 61158-2 (MBP).
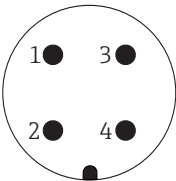

7.1.3   Device plug connectors

For the versions with fieldbus plug connector (M12 or 7/8"), the signal line can be connected without opening the housing.

Pin assignment of the M12 plug connector

	Pin	Meaning
	1	Signal +
	2	not connected
	3	Signal -
	4	Ground

Pin assignment of the 7/8" plug connector

	Pin	Meaning
	1	Signal -
	2	Signal +
	3	Not connected
	4	Screen

7.1.4 Supply voltage

PROFIBUS PA, FOUNDATION Fieldbus

"Power supply; Output" [1]	"Approval" [2]	Terminal voltage
E: 2-wire; FOUNDATION Fieldbus, switch output **G:** 2-wire; PROFIBUS PA, switch output	• Non-Ex • Ex nA • Ex nA(ia) • Ex ic • Ex ic(ia) • Ex d(ia) / XP • Ex ta / DIP • CSA GP	9 to 32 V [3]
	• Ex ia / IS • Ex ia + Ex d(ia) / IS + XP	9 to 30 V [3]

1) Feature 020 of the product structure
2) Feature 010 of the product structure
3) Input voltages up to 35 V will not spoil the device.

Polarity sensitive	No
FISCO/FNICO compliant according to IEC 60079-27	Yes

7.1.5 Overvoltage protection

If the measuring device is used for level measurement in flammable liquids which requires the use of overvoltage protection according to DIN EN 60079-14, standard for test procedures 60060-1 (10 kA, pulse 8/20 µs), an overvoltage protection module has to be installed.

Integrated overvoltage protection module

An integrated overvoltage protection module is available for 2-wire HART as well as PROFIBUS PA and FOUNDATION Fieldbus devices.

Product structure: Feature 610 "Accessory mounted", option NA "Overvoltage protection".

Technical data	
Resistance per channel	2 × 0.5 Ω max.
Threshold DC voltage	400 to 700 V
Threshold impulse voltage	< 800 V
Capacitance at 1 MHz	< 1.5 pF
Nominal arrest impulse voltage (8/20 µs)	10 kA

External overvoltage protection module

HAW562 or HAW569 from Endress+Hauser are suited as external overvoltage protection.

7.2 Connecting the measuring device

⚠ **WARNING**

Risk of explosion!

▸ Observe applicable national standards.
▸ Comply with the specifications in the Safety Instructions (XA).
▸ Use specified cable glands only.
▸ Check to ensure that the power supply matches the information on the nameplate.
▸ Switch off the power supply before connecting the device.
▸ Connect the potential matching line to the outer ground terminal before applying the power supply.

Required tools/accessories:
- For devices with a cover lock: Allen key AF3
- Wire stripper
- When using stranded cables: One ferrule for every wire to be connected.

7.2.1 Opening connection compartment cover
1. Loosen the screw of the securing clamp of the connection compartment cover using an Allen key (3 mm) and turn the clamp 90 ˚ clockwise.

2. Afterwards unscrew connection compartment cover and check lid gasket, replace if necessary.

7.2.2   Connecting
⊞ *17   Dimensions: mm (in)*

1. Push the cable through the cable entry . To ensure tight sealing, do not remove the sealing ring from the cable entry.

2. Remove the cable sheath.

3. Strip the cable ends over a length of 10 mm (0.4 in). In the case of stranded cables, also fit ferrules.

4. Firmly tighten the cable glands.

5. Connect the cable in accordance with the terminal assignment.
6. If using shielded cables: Connect the cable shield to the ground terminal.

7.2.3   Plug-in spring-force terminals

In the case of devices without integrated overvoltage protection, electrical connection is via plug-in spring-force terminals. Rigid conductors or flexible conductors with ferrules can be inserted directly into the terminal without using the lever, and create a contact automatically.
🖼 *18   Dimensions: mm (in)*

To remove cables from the terminal:

1. Using a flat-blade screwdriver ≤ 3 mm, press down on the slot between the two terminal holes

2. while simultaneously pulling the cable end out of the terminal.

7.2.4   Closing connection compartment cover
1. Screw back firmly connection compartment cover.

2. Turning securing clamp 90 ˚ counterclockwise and tighten the clamp with 2.5 Nm (1.84 lbf ft) again using the Allen key (3 mm).

7.3   Post-connection check
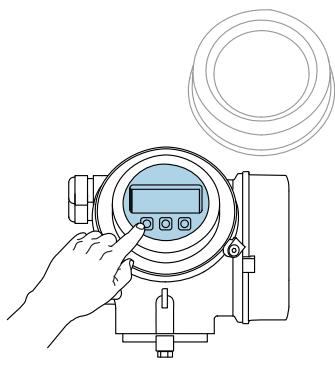

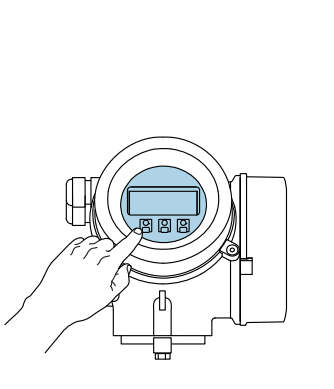

❑	Is the device or cable undamaged (visual check)?
❑	Do the cables comply with the requirements ?
❑	Do the cables have adequate strain relief?
❑	Are all cable glands installed, securely tightened and leak-tight?
❑	Does the supply voltage match the specifications on the nameplate?
❑	Is the terminal assignment correct?

❑	If required: Has protective ground connection been established ?
❑	If supply voltage is present, is the device ready for operation and do values appear on the display module?
❑	Are all housing covers installed and securely tightened?
❑	Is the securing clamp tightened correctly?

8   Operation options

8.1   Overview

8.1.1   Local operation

Operation with	*Pushbuttons*	*Touch Control*
Order code for "Display; Operation"	Option **C** "SD02"	Option **E** "SD03"
	A0036312	A0036313
Display elements	4-line display	4-line display white background lighting; switches to red in event of device error
	Format for displaying measured variables and status variables can be individually configured	
	Permitted ambient temperature for the display: –20 to +70 ℃ (–4 to +158 ℉) The readability of the display may be impaired at temperatures outside the temperature range.	
Operating elements	local operation with 3 push buttons (⊞, ⊟, 𝔼)	external operation via touch control; 3 optical keys: ⊞, ⊟, 𝔼
	Operating elements also accessible in various hazardous areas	
Additional functionality	Data backup function The device configuration can be saved in the display module.	
	Data comparison function The device configuration saved in the display module can be compared to the current device configuration.	
	Data transfer function The transmitter configuration can be transmitted to another device using the display module.	

8.1.2   Operation with remote display and operating module FHX50
◈ 19   FHX50 operating options

1   Display and operating module SD03, optical keys; can be operated through the glass of the cover
2   Display and operating module SD02, push buttons; cover must be removed

8.1.3   Remote operation
Via PROFIBUS PA protocol

◈ 20   Options for remote operation via PROFIBUS PA protocol

1   Segment coupler
2   Computer with Profiboard/Proficard and operating tool (e.g. DeviceCare/FieldCare
3   PLC (Progrommable Logic Controller)
4   Transmitter
5   Additional functions (valves etc.)

DeviceCare/FieldCare via service interface (CDI)
⊠ 21   DeviceCare/FieldCare via service interface (CDI)

1   Service interface (CDI) of the instrument (= Endress+Hauser Common Data Interface)
2   Commubox FXA291
3   Computer with DeviceCare/FieldCare operating tool

8.2 Structure and function of the operating menu

8.2.1 Structure of the operating menu

Menu	Submenu / parameter	Meaning
	Language [1]	Defines the operating language of the on-site display
Commissioning [2]		Launches the interactive wizard for guided commissioning. Additional settings generally do not need to be made in the other menus when the wizard is finished.
Setup	Parameter 1 ... Parameter N	Once values have been set for these parameters, the measurement should generally be completely configured.
	Advanced setup	Contains additional submenus and parameters: • to adapt the device to special measuring conditions. • to process the measured value (scaling, linearization). • to configure the signal output.
Diagnostics	Diagnostic list	Contains up to 5 currently active error messages.
	Event logbook [3]	Contains the last 20 messages (which are no longer active).
	Device information	Contains information for identifying the device.
	Measured values	Contains all current measured values.
	Data logging	Contains the history of the individual measuring values.
	Simulation	Is used to simulate measured values or output values.
	Device check	Contains all parameters needed to check the measurement capability of the device.
	Heartbeat [4]	Contains all the wizards for the **Heartbeat Verification** and **Heartbeat Monitoring** application packages.
Expert [5] Contains all parameters of the device (including those that are already in one of the other menus). This menu is organized according to the function blocks of the device. The parameters of the Expert menu are described in: GP01018F (PROFIBUS PA)	System	Contains all higher-order device parameters that do not concern the measurement or measured value communication.
	Sensor	Contains all parameters needed to configure the measurement.
	Output	Contains all parameters needed to configure the switch output (PFS).

Menu	Submenu / parameter	Meaning
	Communication	Contains all parameters needed to configure the digital communication interface.
	Diagnostics	Contains all parameters needed to detect and analyze operational errors.

1)   If operating via operating tools (e.g. FieldCare), the "Language" parameter is located under "Setup →
     Advanced setup → Display"
2)   Only if operating via an FDT/DTM system
3)   only available with local operation
4)   only available if operating via DeviceCare or FieldCare
5)   On entering the "Expert" menu, an access code is always requested. If a customer specific access code has
     not been defined, "0000" has to be entered.

8.2.2   User roles and related access authorization

The two user roles **Operator** and **Maintenance** have different write access to the parameters if a device-specific access code has been defined. This protects the device configuration via the local display from unauthorized access → 🖺 50.

Access authorization to parameters

User role	Read access		Write access	
	Without access code (from the factory)	With access code	Without access code (from the factory)	With access code
Operator	✔	✔	✔	--
Maintenance	✔	✔	✔	✔

If an incorrect access code is entered, the user obtains the access rights of the **Operator** role.

The user role with which the user is currently logged on is indicated by the **Access status display** parameter (for display operation) or **Access status tooling** parameter (for tool operation).

8.2.3   Data access - Security

Write protection via access code

Using the device-specific access code, the parameters for the measuring device configuration are write-protected and their values can no longer be changed via local operation.

Define access code via local display

1. Navigate to: Setup → Advanced setup → Administration → Define access code → Define access code

2. Define a max. 4-digit numeric code as an access code.

3. Repeat the same code in **Confirm access code** parameter.
    ↳   The ⌨-symbol appears in front of all write-protected parameters.

Define access code via operating tool (e.g. FieldCare)

1. Navigate to: Setup → Advanced setup → Administration → Define access code

2. Define a max. 4-digit numeric code as an access code.
    ↳   Write protection is active.

Parameters that can always be changed
The write protection does not include certain parameters that do not affect the measurement. Despite the defined access code, they can always be modified, even if the other parameters are locked.
The device automatically locks the write-protected parameters again if a key is not pressed for 10 minutes in the navigation and editing view. The device locks the write-protected parameters automatically after 60 s if the user skips back to the measured value display mode from the navigation and editing view.

- If write access is activated via access code, it can be also be deactivated only via the access code → 🖺 51.
- In the "Description of Device Parameters" documents, each write-protected parameter is identified with the ⌨-symbol.

Disabling write protection via access code

If the ⌨-symbol appears on the local display in front of a parameter, the parameter is write-protected by a device-specific access code and its value cannot be changed at the moment using the local display → 🕮 50.

The locking of the write access via local operation can be disabled by entering the device-specific access code.

1. After you press 🗉, the input prompt for the access code appears.

2. Enter the access code.
   ↳ The ⌨-symbol in front of the parameters disappears; all previously write-protected parameters are now re-enabled.

Deactivation of the write protection via access code

Via local display

1. Navigate to: Setup → Advanced setup → Administration → Define access code → Define access code

2. Enter **0000**.

3. Repeat **0000** in **Confirm access code** parameter.
   ↳ The write protection is deactivated. Parameters can be changed without entering an access code.

Via an operating tool (e.g. FieldCare)

1. Navigate to: Setup → Advanced setup → Administration → Define access code

2. Enter **0000**.
   ↳ The write protection is deactivated. Parameters can be changed without entering an access code.

Write protection via write protection switch

Unlike parameter write protection via a user-specific access code, this allows write access to the entire operating menu - except for the **"Contrast display" parameter** - to be locked.

The parameter values are now read only and cannot be edited any more (exception **"Contrast display" parameter**):
• Via local display
• Via PROFIBUS PA protocol
A0026157

1. Loosen the securing clamp.

2. Unscrew the electronics compartment cover.

3. Pull out the display module with a gentle rotational movement. To make it easier to access the lock switch, attach the display module to the edge of the electronics compartment.
A0036086

4. Setting the write protection switch (WP) on the main electronics module to the **ON** position enables hardware write protection. Setting the write protection switch (WP) on the main electronics module to the **OFF** position (factory setting) disables hardware write protection.

    ↳ If the hardware write protection is enabled: The **Hardware locked** option is displayed in the **Locking status** parameter. In addition, on the local display the ⓐ-symbol appears in front of the parameters in the header of the operational display and in the navigation view.
A0015870

    If the hardware write protection is disabled: No option is displayed in the **Locking status** parameter. On the local display, the ⓐ-symbol disappears from in front of the parameters in the header of the operational display and in the navigation view.

5. Feed the cable into the gap between the housing and main electronics module and plug the display module into the electronics compartment in the desired direction until it engages.

6. Reverse the removal procedure to reassemble the transmitter.

Enabling and disabling the keypad lock

The keypad lock makes it possible to block access to the entire operating menu via local operation. As a result, it is no longer possible to navigate through the operating menu or change the values of individual parameters. Users can only read the measured values on the operational display.

The keypad lock is switched on and off via the context menu.

Switching on the keypad lock

For the SD03 display only
The keypad lock is switched on automatically:
• If the device has not been operated via the display for > 1 minute.
• Each time the device is restarted.

To activate the keylock manually:

1. The device is in the measured value display.
   Press Ⓔ for at least 2 seconds.
   ↳ A context menu appears.

2. In the context menu select the **Keylock on** option.
   ↳ The keypad lock is switched on.

If the user attempts to access the operating menu while the keypad lock is active, the message **Keylock on** appears.

Switching off the keypad lock

1. The keypad lock is switched on.
   Press Ⓔ for at least 2 seconds.
   ↳ A context menu appears.

2. In the context menu select the **Keylock off** option.
   ↳ The keypad lock is switched off.

Bluetooth® wireless technology

Signal transmission via Bluetooth® wireless technology uses a cryptographic technique tested by the Fraunhofer Institute
• The device is not visible via *Bluetooth*® wireless technology without the SmartBlue app
• Only one point-to-point connection between **one** sensor and **one** smartphone or tablet is established

8.3 Display and operating module

8.3.1 Display appearance
A0012635

🖾 *22   Appearance of the display and operation module for on-site operation*

1   Measured value display (1 value max. size)
1.1   Header containing tag and error symbol (if an error is active)
1.2   Measured value symbols
1.3   Measured value
1.4   Unit
2   Measured value display (1 bargraph + 1 value)
2.1   Bargraph for measured value 1
2.2   Measured value 1 (including unit)
2.3   Measured value symbols for measured value 1
2.4   Measured value 2
2.5   Unit for measured value 2
2.6   Measured value symbols for measured value 2
3   Representation of a parameter (here: a parameter with selection list)
3.1   Header containing parameter name and error symbol (if an error is active)
3.2   Selection list; ☑ marks the current parameter value.
4   Input matrix for numbers
5   Input matrix for alphanumeric and special characters

Display symbols for the submenus

Symbol	Meaning
A0018367	**Display/operation** Is displayed: • in the main menu next to the selection "Display/operation" • in the header, if you are in the "Display/operation" menu
A0018364	**Setup** Is displayed: • in the main menu next to the selection "Setup" • in the header, if you are in the "Setup" menu
A0018365	**Expert** Is displayed: • in the main menu next to the selection "Expert" • in the header, if you are in the "Expert" menu
A0018366	**Diagnostics** Is displayed: • in the main menu next to the selection "Diagnostics" • in the header, if you are in the "Diagnostics" menu
Status signals

Symbol	Meaning
F A0032902	**"Failure"** A device error is present. The measured value is no longer valid.
C A0032903	**"Function check"** The device is in service mode (e.g. during a simulation).
S A0032904	**"Out of specification"** The device is operated: • Outside of its technical specifications (e.g. during startup or a cleaning) • Outside of the configuration carried out by the user (e.g. level outside configured span)
M A0032905	**"Maintenance required"** Maintenance is required. The measured value is still valid.

Display symbols for the locking state

Symbol	Meaning
A0013148	**Display parameter** Marks display-only parameters which can not be edited.
A0013150	**Device locked** • In front of a parameter name: The device is locked via software and/or hardware. • In the header of the measured value screen: The device is locked via hardware.

Measured value symbols

Symbol	Meaning
Measured values	
A0032892	Level
A0032893	Distance
A0032908	Current output
A0032894	Measured current
A0032895	Terminal voltage
A0032896	Temperature of the electronics or the sensor
Measuring channels	
A0032897	Measuring channel 1
A0032898	Measuring channel 2
Status of the measured value	
A0018361	**Status "Alarm"** The measurment is interrupted. The output assumes the defined alarm value. A diagnostic message is generated.
A0018360	**Status "Warning"** The device continues measuring. A diagnostic message is generated.

8.3.2   Operating elements

Key	Meaning
⊟ A0018330	**Minus key** *For menu, submenu* Moves the selection bar upwards in a picklist. *For text and numeric editor* In the input mask, moves the selection bar to the left (backwards).
⊞ A0018329	**Plus key** *For menu, submenu* Moves the selection bar downwards in a picklist. *For text and numeric editor* In the input mask, moves the selection bar to the right (forwards).

🄴
 A0018328
	Enter key
	
	 For measured value display
	 • Pressing the key briefly opens the operating menu.
	 • Pressing the key for 2 s opens the context menu.
	
	 For menu, submenu
	 • Pressing the key briefly
	  Opens the selected menu, submenu or parameter.
	 • Pressing the key for 2 s for parameter:
	  If present, opens the help text for the function of the parameter.
	
	 For text and numeric editor
	 • Pressing the key briefly
	  – Opens the selected group.
	  – Carries out the selected action.
	 • Pressing the key for 2 s confirms the edited parameter value.

⊟ + ⊞
 A0032909
	Escape key combination (press keys simultaneously)
	
	 For menu, submenu
	 • Pressing the key briefly
	  – Exits the current menu level and takes you to the next higher level.
	  – If help text is open, closes the help text of the parameter.
	 • Pressing the key for 2 s returns you to the measured value display ("home position").
	
	 For text and numeric editor
	 Closes the text or numeric editor without applying changes.

⊟ + 🄴 A0032910	**Minus/Enter key combination (press and hold down the keys simultaneously)** Reduces the contrast (brighter setting).
⊞ + 🄴 A0032911	**Plus/Enter key combination (press and hold down the keys simultaneously)** Increases the contrast (darker setting).

8.3.3   Entering numbers and text

Numeric editor	Text editor

1   Editing view
2   Display area of the entered values
3   Input mask
4   Operating elements
Input mask

The following input symbols are available in the input mask of the numeric and text editor:
Numeric editor symbols

Symbol	Meaning
A0013998	Selection of numbers from 0 to 9.
A0016619	Inserts decimal separator at the input position.
A0016620	Inserts minus sign at the input position.
A0013985	Confirms selection.
A0016621	Moves the input position one position to the left.
A0013986	Exits the input without applying the changes.
A0014040	Clears all entered characters.

Text editor symbols

Symbol	Meaning
A0013997	Selection of letters from A to Z
Aa1@ A0013981	Toggle • Between upper-case and lower-case letters • For entering numbers • For entering special characters

A0013985	Confirms selection.
A0013987	Switches to the selection of the correction tools.
A0013986	Exits the input without applying the changes.
A0014040	Clears all entered characters.

Correction symbols under

Symbol	Meaning
A0032907	Clears all entered characters.
A0018324	Moves the input position one position to the right.
A0018326	Moves the input position one position to the left.
A0032906	Deletes one character immediately to the left of the input position.

8.3.4 Opening the context menu

Using the context menu, the user can call up the following menus quickly and directly from the operational display:

- Setup
- Conf. backup disp.
- Env.curve
- Keylock on

Opening and closing the context menu

The user is in the operational display.

1. Press Ⓔ for 2 s.
   ↳ The context menu opens.
2. Press ⊟ + ⊞ simultaneously.
   ↳ The context menu is closed and the operational display appears.

Calling up the menu via the context menu

1. Open the context menu.
2. Press ⊞ to navigate to the desired menu.
3. Press Ⓔ to confirm the selection.
   ↳ The selected menu opens.

8.3.5 Envelope curve on the display and operating module

In order to assess the measuring signal, the envelope curve and - if a mapping has been recorded - the mapping curve can be displayed:
A0014277

9 Integration into a PROFIBUS network

9.1 Overview of the device database files (GSD)

Manufacturer ID	17 (0x11)
Ident number	0x1559
Profile version	3.02
GSD file	Information and files under:
GSD file version	▪ www.endress.com ▪ www.profibus.org

9.2 Set device address
🖼 *23   Address switches in terminal compartment*

9.2.1 Hardware adressing

1. Set switch 8 to "OFF".

2. Define the address with switches 1 to 7 according to the table below.

The address change becomes effective after 10 seconds. The device restarts automatically.

Switch	1	2	3	4	5	6	7
Value in position "ON"	1	2	4	8	16	32	64
Value in position "OFF"	0	0	0	0	0	0	0
🖼 *24   Example of hardware addressing: switch 8 is in position "OFF"; switches 1 to 7 define the address.*

9.2.2 Software addressing

1. Set switch 8 to "ON".

2. The device restarts automatically. The address remains the same as before (factory setting: 126).

3. Set the required address via the operating menu: Setup → Device address
A0015903

⊠ 25   Example of software addressing; switch 8 is in position "ON"; the address is defined in the operating menu
(Setup → Device address)

10   Commissioning via wizard

A wizard guiding the user through the initial setup is available in FieldCare and DeviceCare [3].

1.   Connect the device to FieldCare or DeviceCare → 🖺 46.

2.   Open the device in FieldCare or DeviceCare.
     ↳ The dashboard (home page) of the device appears:
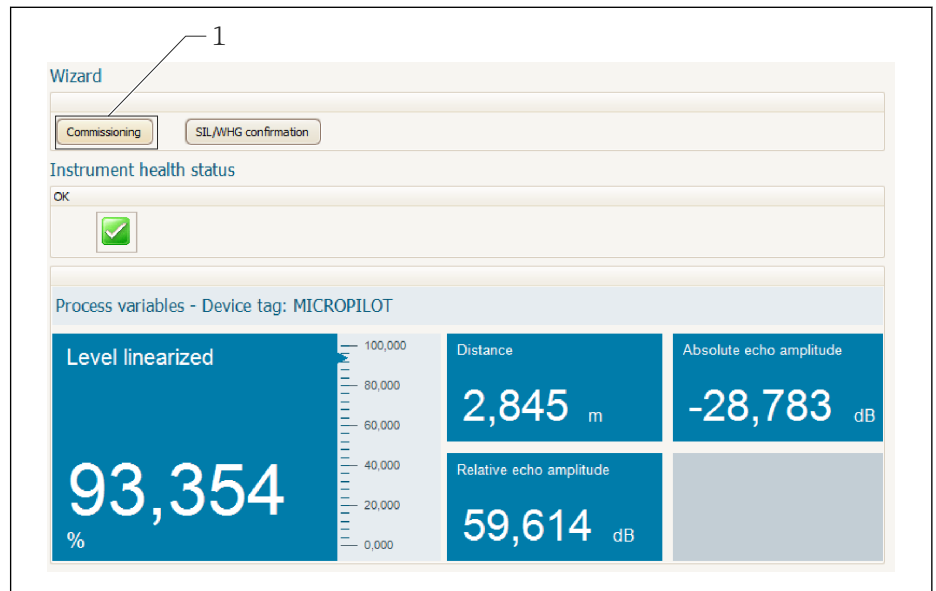

1   "Commissioning" button calls up the wizard.

3.   Click on "Commissioning" to call up the wizard.

4.   Enter or select the appropriate value for each parameter. These values are immediately written to the device.

5.   Click "Next" to switch to the next page.

6.   After finishing the last page, click "End of sequence" to close the wizard.

ℹ️   If the wizard is cancelled before all necessary parameters have been set, the device may be in an undefined state. A reset to the default settings is recommended in this case.

---

3)   DeviceCare is available for download at www.software-products.endress.com. The download requires a registration in the Endress+Hauser software portal.

11   Commissioning via operating menu

11.1   Installation and function check

Make sure that all final checks have been completed before you start up your measuring point:

- Checklist "Post-installation check" → 🕮 35
- Checklist "Post-connection check" → 🕮 43

11.2   Setting the operating language

Factory setting: English or ordered local language
🖩 26   *Using the example of the local display*

11.3   Configuration of a level measurement
⊡ 27   *Configuration parameters for level measurements in bulk solids*

R   Reference point of the measurement
D   Distance
L   Level
E   Empty calibration (= zero)
F   Full calibration (= span)

1.   Navigate to: Setup → Device tag
    ↳ Enter tag for measuring point.

2.   Navigate to: Setup → Device address
    ↳ Enter bus address of the device (only in case of software addressing).

3.   Navigate to: Setup → Distance unit
    ↳ Select distance unit.

4.   Navigate to: Setup → Bin type
    ↳ Select bin type.

5.   Navigate to:Setup → Max. filling speed solid
    ↳ Enter maximum expected filling speed.

6.   Navigate to:Setup → Max. draining speed solid
    ↳ Enter maximum expected draining speed.

7.   Navigate to: Setup → Empty calibration
    ↳ Enter empty distance E (Distance from reference point R to the 0% level) [4].

8.   Navigate to: Setup → Full calibration
    ↳ Enter full distance F (Distance from the 0% to the 100% level).

9.   Navigate to: Setup → Level
    ↳ Indicates the measrued level L.

10.   Navigate to: Setup → Distance
    ↳ Indicates the measured distance from the reference point R to the level L.

---

4)   If, for example, the measuring range covers only an upper part of the tank (E << tank height), it is mandatory to enter the acutal tank height into
    the "Setup → Advanced Setup → Level → Tank/silo height" parameter.

11. Navigate to: Setup → Signal quality
    ↳ Indicates the quality of the evaluated level echo.

12. When operating via local display:
    Navigate to: Setup → Mapping → Confirm distance
    ↳ Compare distance indicated on the display to real distance in order to start the recording of an interference echo map.

13. When operating via operating tool:
    Navigate to: Setup → Confirm distance
    ↳ Compare distance indicated on the display to real distance in order to start the recording of an interference echo map.

14. Navigate to: Setup → Advanced setup → Level → Level unit
    ↳ Select level unit: %, m, mm, ft, in (Factory setting: %)

[i] It is strongly recommended to adjust the maximum filling and draining speed to the actual process.

11.4   Recording the reference curve

After the configuration of the measurement it is recommended to record the current envelope curve as a reference curve. The reference curve can be used later on in the process for diagnostic purposes. To record the reference curve use the **Save reference curve** parameter.

Navigation in the menu
Expert → Diagnostics → Envelope diagnostics → Save reference curve

Meaning of the options
- No
  No action
- Yes
  The current envelope curve is saved as reference curve.

In devices which have been delivered with software version 01.00.zz, this submenu is only visible for the "Service" user role.

The reference curve can only be displayed in the envelope curve diagram of FieldCare after it has been loaded from the device into FieldCare. This is performed by the "Load Reference Curve" function in FieldCare.
 28   The "Load Reference Curve" function

11.5 Configuration of the on-site display

11.5.1 Factory settings of the on-site display

Parameter	Factory setting
Format display	1 value, max. size
Value 1 display	Level linearized
Value 2 display	None
Value 3 display	None
Value 4 display	None

11.5.2 Adjustment of the on-site display

The on-site display can be adjusted in the following submenu:
Setup → Advanced setup → Display

11.6   Configuration management

After commissioning, you can save the current device configuration, copy it to another measuring point or restore the previous device configuration. You can do so using the **Configuration management** parameter and its options.

Navigation path in the operating menu
Setup → Advanced setup → Configuration backup display → Configuration management

Meaning of the options
- **Cancel**
  No action is executed and the user exits the parameter.
- **Execute backup**
  A backup copy of the current device configuration in the HistoROM (built-in in the device) is saved to the display module of the device. The backup copy comprises the transmitter and sensor data of the device.
- **Restore**
  The last backup copy of the device configuration is copied from the display module to the HistoROM of the device. The backup copy comprises the transmitter and sensor data of the device.
- **Duplicate**
  The transmitter configuration is duplicated to another device using the transmitter display module. The following parameters, which characterize the individual measuring point are **not** included in the transmitted configuration:
  Medium type
- **Compare**
  The device configuration saved in the display module is compared to the current device configuration of the HistoROM. The result of this comparison is displayed in the **Comparison result** parameter.
- **Clear backup data**
  The backup copy of the device configuration is deleted from the display module of the device.

While this action is in progress, the configuration cannot be edited via the local display and a message on the processing status appears on the display.

If an existing backup is restored to a different device using the **Restore** option, it may occur that some device functionalities are no longer available. In some cases even a device reset → 🖹 156 will not restore the original status..

In order to transmit a configuration to a different device, the **Duplicate** option should always be used.

11.7 Protection of the settings against unauthorized changes
There are two ways to protect the settings against unauthorized changes:

- Via parameter settings (software locking) → 🗎 50
- Via locking switch (hardware locking) → 🗎 51
12   Diagnostics and troubleshooting

12.1   General trouble shooting

12.1.1   General errors

Error	Possible cause	Remedial action
Device does not respond.	Supply voltage not connected.	Connect the correct voltage.
	The cables do not contact the terminals properly.	Ensure electrical contact between the cable and the terminal.
Values on the display invisible	Contrast setting is too weak or too strong.	• Increase contrast by pressing ⊞ and ⒠ simultaneously. • Decrease contrast by pressing ⊟ and ⒠ simultaneously.
	The plug of the display cable is not connected correctly.	Connect the plut correctly.
	Display is defective.	Replace display.
"Communication error" is indicated on the display when starting the device or connecting the display	Electromagnetic interference	Check grounding of the device.
	Broken display cable or display plug.	Exchange display.
Duplicating of the parameters from one device to another via the display doesn't work. Only the "Save" and "Abort" options are available.	Display with backup is not recognized if no data backup has been performed at the device before.	Connect display (with the backup) and restart the device.
CDI communication does not work.	Wrong setting of the COM port on the computer.	Check the setting of the COM port on the computer and change it if necessary.
Device measures incorrectly.	Parametrization error	Check and adjust parameterization.

12.1.2   Parametrization errors

Error	Possible cause	Remedy
Measured value incorrect	If measured distance (Setup → Distance) matches the real distance: Calibration error	• Check and adjust **Empty calibration** parameter (→ 🗎 110) if necessary. • heck and adjust **Full calibration** parameter (→ 🗎 111) if necessary. • Check and adjust linearization if necessary (**Linearization** submenu (→ 🗎 127)).
	Wrong level correction	Enter correct value in **Level correction** parameter (→ 🗎 124).
	If measured distance (Setup → Distance) does not match the real distance: Interference echo	Carry out tank mapping (**Confirm distance** parameter (→ 🗎 113)).
No change of measured value on filling / emptying	Interference echo from installations, nozzle or build-up on the antenna.	• Carry out tank mapping (**Confirm distance** parameter (→ 🗎 113)). • If possible, align antenna in the direction of the solid surface in order to prevent interference echoes. • If necessary, clean antenna (purge air). • If necessary, select a better mounting position and/or larger antenna.

Error	Possible cause	Remedy
During filling/emptying or measurement, the measured value jumps sporadically to a higher level.	Signal is weakened (e.g. by fluidisation of the surface, extreme dust formation) - the interference echoes are sometimes stronger. Strong build-up, filling stream in path of beam.	• Carry out tank mapping (**Confirm distance** parameter (→ 🖹 113)). • Increase integration time (Expert → Sensor → Distance → Integration time) • Optimize alignment of antenna • If necessary, select a better mounting position and/or larger antenna. • If necessary, clean antenna (purge air).
Error message F941 or S941 "Echo lost"	Level echo is too weak. Possible causes: • Fluidisation of the surface • Extreme dust formation • Angle or repose	• Optimize alignment of antenna • If necessary, select a better mounting position and/or larger antenna.
Measured values jumps to higher levels and remains there.	• Build-up at container • Build-up at antenna • Strong condensate formation at antenna	• Periodic cleaning • Carry out tank mapping (**Confirm distance** parameter (→ 🖹 113)). • Increase integration time (Expert → Sensor → Distance → Integration time) • Optimize alignment of antenna • If necessary, select a better mounting position and/or larger antenna.
Device displays a level when the tank is empty.	Interference echo	Carry out mapping over entire measuring range when the silo is empty (**Confirm distance** parameter (→ 🖹 113)).
Wrong slope of the level throughout the complete measuring range	Bin property or process propertis incorrect	• Select the correct option in **Bin type** parameter (→ 🖹 109). • Enter the actual values in **Max. filling speed solid** (→ 🖹 109) and **Max. draining speed solid** (→ 🖹 110).

12.2   Diagnostic information on local display

12.2.1   Diagnostic message

Faults detected by the self-monitoring system of the measuring device are displayed as a diagnostic message in alternation with the measured value display.

Measured value display in alarm condition	Diagnostic message

1   Status signal
2   Status symbol (symbol for event level))
3   Status symbol with diagnostics event
4   Event text
5   Operating elements

Status signals

F A0032902	**"Failure (F)" option** A device error is present. The measured value is no longer valid.	
C A0032903	**"Function check (C)" option** The device is in service mode (e.g. during a simulation).	
S A0032904	**"Out of specification (S)" option** The device is operated: • Outside of its technical specifications (e.g. during startup or a cleaning) • Outside of the configuration carried out by the user (e.g. level outside configured span)	
M A0032905	**"Maintenance required (M)" option** Maintenance is required. The measured value is still valid.	

Status symbol (symbol for event level)

⊗	**"Alarm" status** The measurement is interrupted. The signal outputs take on the defined alarm condition. A diagnostic message is generated.
⚠	**"Warning" status** The device continues to measure. A diagnostic message is generated.

Diagnostics event and event text

The fault can be identified using the diagnostics event. The event text helps you by providing information about the fault. In addition, the corresponding symbol is displayed before the diagnostics event.

	Diagnostics event		
Status symbol	Status signal	Event number	Event text
	↓	↓	↓
Example ⚠	**S** A0032904	441	**Curr.output 1**
		3-digit number	
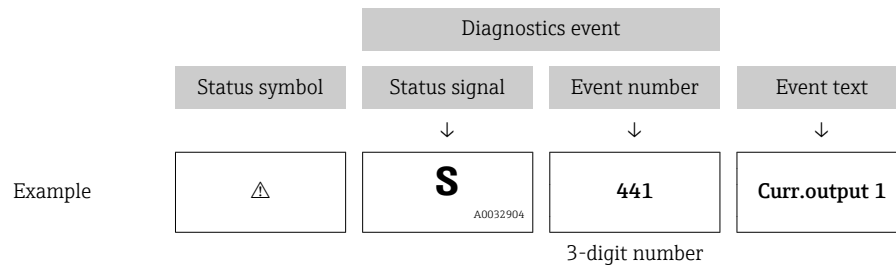

If two or more diagnostic messages are pending simultaneously, only the message with the highest priority is shown. Additional pending diagnostic messages can be shown in the **Diagnostic list** submenu.

Past diagnostic messages that are no longer pending are shown as follows:
- On the local display:
  in the **Event logbook** submenu
- In FieldCare:
  via the "Event List /HistoROM" function.

Operating elements

Operating functions in menu, submenu	
⊞	**Plus key** Opens the message about the remedial measures.
Ⓔ	**Enter key** Opens the operating menu.

12.2.2 Calling up remedial measures
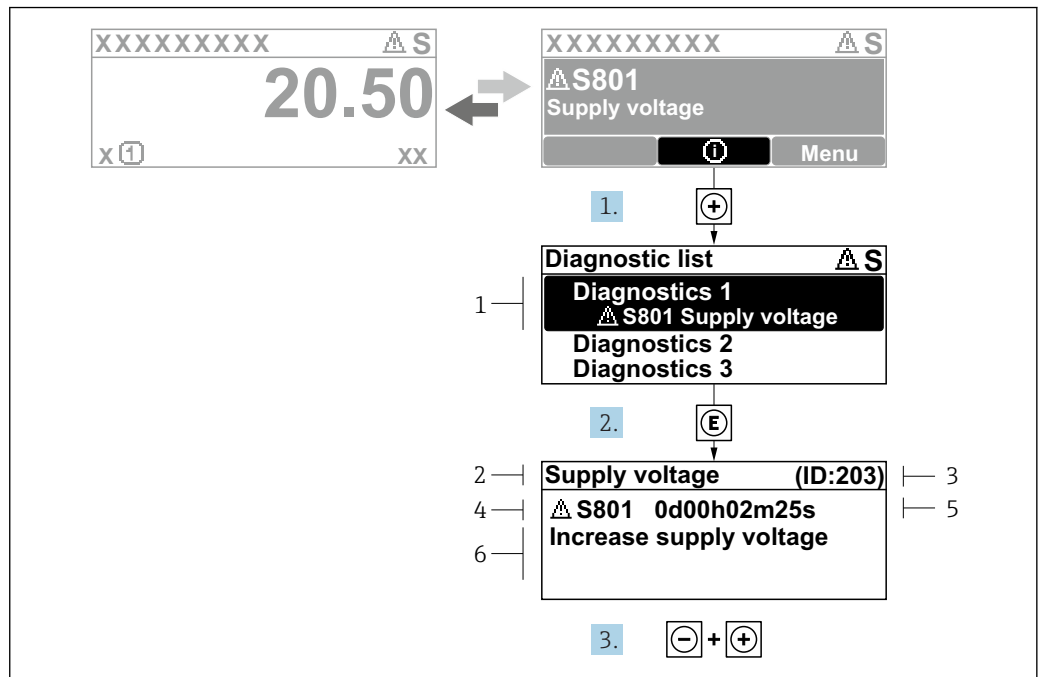

⊠ 29 Message for remedial measures

1   Diagnostic information
2   Short text
3   Service ID
4   Diagnostic behavior with diagnostic code
5   Operation time of occurrence
6   Remedial measures

The user is in the diagnostic message.

1. Press ⊞ (ⓘ-Symbol).
   ↳ **Diagnostic list** submenu opens.

2. Select the desired diagnostic event with ⊞ or ⊟ and press Ⓔ.
   ↳ The message for the remedial measures for the selected diagnostic event opens.

3. Press ⊟ + ⊞ simultaneously.
   ↳ The message for the remedial measures closes.

The user is in the **Diagnostics** menu at an entry for a diagnostics event, e.g. in **Diagnostic list** submenu or in **Previous diagnostics**.

1. Press Ⓔ.
   ↳ The message for the remedial measures for the selected diagnostic event opens.

2. Press ⊟ + ⊞ simultaneously.
   ↳ The message for the remedial measures closes.

12.3   Diagnostic event in the operating tool

If a diagnostic event is present in the device, the status signal appears in the top left status in the operating tool along with the corresponding symbol for event level in accordance with NAMUR NE 107:

- Failure (F)
- Function check (C)
- Out of specification (S)
- Maintenance required (M)

A: Via the operating menu

1. Navigate to the **Diagnostics** menu.
    ↳ In the **Actual diagnostics** parameter, the diagnostic event is shown with event text.

2. On the right in the display range, hover the cursor over the **Actual diagnostics** parameter.
    ↳
A tool tip with remedial measures for the diagnostic event appears.

B: Via the "Create documentation" function

1.
Select the "Create documentation" function.

2.
Make sure "Data overview" is marked.

3. Click "Save as ..." and save a PDF of the protocol.
   ↳ The protocol contains the diagnostic messages and remedy information.

C: Via the "Eventlist / Extended HistoROM" function

1.
Select the "Eventlist / Extended HistoROM" function.

2.

Select the "Load Eventlist" function.
↳ The list of events, including remedy information, is shown in the "Data overview" window.

12.4   Diagnostic list

In the **Diagnostic list** submenu submenu, up to 5 currently pending diagnostic messages can be displayed. If more than 5 messages are pending, the messages with the highest priority are shown on the display.

Navigation path
Diagnostics → Diagnostic list

Calling up and closing the remedial measures

1. Press Ⓔ.
   ↳ The message for the remedial measures for the selected diagnostic event opens.

2. Press ⊟ + ⊞ simultaneously.
   ↳ The message about the remedial measures closes.

12.5   Overview of diagnostic events

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
Diagnostic of electronic				
242	Software incompatible	1. Check software 2. Flash or change main electronics module	F	Alarm
252	Modules incompatible	1. Check electronic modules 2. Change I/O or main electronic module	F	Alarm
261	Electronic modules	1. Restart device 2. Check electronic modules 3. Change I/O Modul or main electronics	F	Alarm
262	Module connection	1. Check module connections 2. Change electronic modules	F	Alarm
270	Main electronic failure	Change main electronic module	F	Alarm
271	Main electronic failure	1. Restart device 2. Change main electronic module	F	Alarm
272	Main electronic failure	1. Restart device 2. Contact service	F	Alarm
273	Main electronic failure	1. Emergency operation via display 2. Change main electronics	F	Alarm
275	I/O module failure	Change I/O module	F	Alarm
276	I/O module failure	1. Restart device 2. Change I/O module	F	Alarm
282	Data storage	1. Restart device 2. Contact service	F	Alarm
283	Memory content	1. Transfer data or reset device 2. Contact service	F	Alarm
311	Electronic failure	1. Transfer data or reset device 2. Contact service	F	Alarm
311	Electronic failure	Maintenance required! 1. Do not perform reset 2. Contact service	M	Warning
Diagnostic of configuration				
410	Data transfer	1. Check connection 2. Retry data transfer	F	Alarm
411	Up-/download active	Up-/download active, please wait	C	Warning
412	Processing Download	Download active, please wait	C	Warning
435	Linearization	Check linearization table	F	Alarm
437	Configuration incompatible	1. Restart device 2. Contact service	F	Alarm
438	Dataset	1. Check data set file 2. Check device configuration 3. Up- and download new configuration	M	Warning
482	Block in OOS	Set Block in AUTO mode	F	Alarm
484	Simulation failure mode	Deactivate simulation	C	Alarm

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
485	Simulation measured value	Deactivate simulation	C	Warning
494	Switch output simulation	Deactivate simulation switch output	C	Warning
495	Simulation diagnostic event	Deactivate simulation	C	Warning
497	Simulation block output	Deactivate simulation	C	Warning
585	Simulation distance	Deactivate simulation	C	Warning
586	Record map	Recording of mapping please wait	C	Warning
Diagnostic of process				
801	Energy too low	Increase supply voltage	S	Warning
825	Operating temperature	1. Check ambient temperature 2. Check process temperature	S	Warning
825	Operating temperature		F	Alarm
921	Change of reference	1. Check reference configuration 2. Check pressure 3. Check sensor	S	Warning
941	Echo lost	Check parameter 'DC value'	F	Alarm [1]
942	In safety distance	1. Check level 2. Check safety distance 3. Reset self holding	S	Alarm [1]
943	In blocking distance	Reduced accuracy Check level	S	Warning
950	Advanced diagnostic 1 to 2 occured	Maintain your diagnostic event	M	Warning [1]

1)   Diagnostic behavior can be changed.

12.6   Event logbook

12.6.1   Event history

A chronological overview of the event messages that have occurred is provided in the **Event list** submenu [5].

Navigation path
Diagnostics → Event logbook → Event list

A maximum of 100 event messages can be displayed in chronological order.

Die Ereignishistorie umfasst Einträge zu:
• Diagnostic events
• Information events
---

5)   This submenu is only available for operation via local display. In the case of operation via FieldCare, the event list can be displayed with the "Event List / HistoROM" functionality of FieldCare.

In addition to the operation time of its occurrence, each event is also assigned a symbol that indicates whether the event has occurred or is ended:

- Diagnostic event
  - ⊙: Event has occurred
  - ⊙: Event has ended
- Information event
  ⊙: Event has occurred

Calling up and closing the remedial measures

1. Press E
   ↳ The message for the remedial measures for the selected diagnostic event opens.

2. Press ⊟ + ⊞ simultaneously.
   ↳ The message about the remedial measures closes.

12.6.2 Filtering the event logbook

Using the **Filter options** parameter, you can define which category of event messages is displayed in the **Event list** submenu.

Navigation path
Diagnostics → Event logbook → Filter options

Filter categories
- All
- Failure (F)
- Function check (C)
- Out of specification (S)
- Maintenance required (M)
- Information

12.6.3 Overview of information events

Info number	Info name
I1000	--------(Device ok)
I1089	Power on
I1090	Configuration reset
I1091	Configuration changed
I1092	Trend data deleted
I1110	Write protection switch changed
I1137	Electronic changed
I1151	History reset
I1154	Reset terminal voltage min/max
I1155	Reset electronic temperature
I1156	Memory error trend
I1157	Memory error event list
I1185	Display backup done
I1186	Restore via display done
I1187	Settings downloaded with display
I1188	Display data cleared
I1189	Backup compared

Info number	Info name
I1256	Display: access status changed
I1264	Safety sequence aborted
I1335	Firmware changed
I1397	Fieldbus: access status changed
I1398	CDI: access status changed
I1512	Download started
I1513	Download finished
I1514	Upload started
I1515	Upload finished

12.7   Firmware history

Date	Firmware version	Modifications	Documentation (FMR56/FMR57, PROFIBUS PA)		
			Operating Instructions	Description of Parameters	Technical Information
04.2013	01.00.zz	Original software	BA01127F/00/EN/01.13	GP01018F/00/EN/01.13	TI01042F/00/EN/02.13
03.2015	01.01.zz	• additional languages • HistoROM functionality enhanced • Improvements and bugfixes	BA01127F/00/EN/02.14 BA01127F/00/EN/03.16 [1]	GP01018F/00/EN/02.14	TI01042F/00/EN/05.14 TI01042F/00/EN/07.16 [1]

1)   Contains information on the Heartbeat wizards which are available in the latest DTM version for DeviceCare and FieldCare.

The firmware version can explicitly be ordered via the product structure. In this way it is possible to ensure compatibility of the firmware version with an existing or planned system integration.

13   Maintenance

The measuring device requires no special maintenance.

13.1   Exterior cleaning

When exterior-cleaning the device, always use cleaning agents that do not attack the surface of the hosuing and the seals.

13.2   Replacing seals

The process seals of the sensors (at the process connection) must be replaced periodically, particularly if molded seals (aseptic construction) are used. The period between changes depends on the frequency of cleaning cycles and on the temperature of the measured substance and the cleaning temperature.

14 Repairs

14.1 General information on repairs

14.1.1 Repair concept

The Endress+Hauser repair concept assumes that the devices have a modular design and that repairs can be done by the Endress+Hauser service or specially trained customers.

Spare parts are contained in suitable kits. They contain the related replacement instructions.

For more information on service and spare parts, contact the Service Department at Endress+Hauser.

14.1.2 Repairs to Ex-approved devices

When carrying out repairs to Ex-approved devices, please note the following:

- Repairs to Ex-approved devices may only be carried out by trained personnel or by the Endress+Hauser Service.
- Comply with the prevailing standards, national Ex-area regulations, safety instructions (XA) and certificates.
- Only use original spare parts from Endress+Hauser.
- When ordering a spare part, please note the device designation on the nameplate. Only replace parts with identical parts.
- Carry out repairs according to the instructions. On completion of repairs, carry out the specified routine test on the device.
- Only Endress+Hauser Service may convert a certified device into a different certified variant.
- Document all repair work and conversions.

14.1.3 Replacement of an electronics module

If an electronics module has been replaced, it is not necessary to perform a new basic setup as the calibration parameters are stored in the HistoROM which is located in the housing. However, after exchanging the main electronics module it may be necessary to record a new mapping (interference echo suppression).

14.1.4 Replacement of a device

After a complete device or electronic module has been replaced, the parameters can be downloaded into the instrument again in one of the following ways:

- Via the display module
  Condition: The configuration of the old device has been saved in the display module → 🖺 153.
- Via FieldCare
  Condition: The configuration of the old device has been saved to the computer via FieldCare.

You can continue to measure without carrying out a new setup. Only a linearization and a tank map (interference echo suppression) have to be recorded again.

14.2   Spare parts

- A few interchangeable measuring device components are identified by a spare part nameplate. This contains information about the spare part.
- The connection compartment cover of the device contains a spare part nameplate that includes the following information:
  - A list of the most important spare parts for the measuring device, including their ordering information.
  - The URL for the *W@M Device Viewer* (www.endress.com/deviceviewer):
    There, all spare parts for the measuring device are listed, including the order code, and can be ordered. If available, the corresponding Installation Instructions can also be downloaded there.

Spare parts for:		
Ser.-no.:	8A21AC098AF4	
Pos. no.	Spare part	Spare no./structure
1	Sensor	XPF0002- / XPF0003-
2	Main electr.	XPF0001-
3	IO module	71023451
4	Cover (front)	**71023451**
5	Cover (right)	71023451
6	Display	71023451

Additional information: www.endress.com/deviceviewer
◰ 30   Example for spare part nameplate in connection compartment cover

Measuring device serial number:
- Is located on the device and spare part nameplate.
- Can be read out via the "Serial number" parameter in the "Device information" submenu.

14.3   Return

The measuring device must be returned if it is need of repair or a factory calibration, or if the wrong measuring device has been delivered or ordered. Legal specifications require Endress+Hauser, as an ISO-certified company, to follow certain procedures when handling products that are in contact with the medium.

To ensure safe, swift and professional device returns, please refer to the procedure and conditions for returning devices provided on the Endress+Hauser website at http://www.endress.com/support/return-material
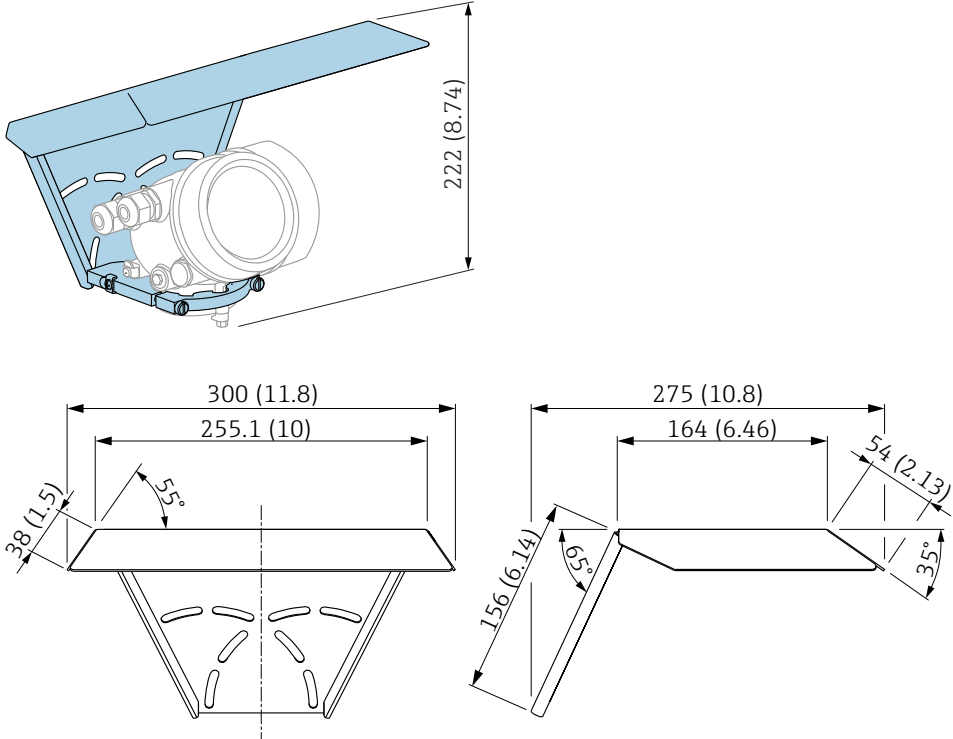

14.4   Disposal

Observe the following notes during disposal:
- Observe valid federal/national regulations.
- Ensure proper separation and reuse of the device components.

15 Accessories

15.1 Device-specific accessories

15.1.1 Weather protection cover

Accessory	Description
Weather protection cover	 *31 Weather protection cover; Dimensions: mm (in)* ℹ️ The weather protection cover can be ordered together with the device (product structure, feature 620 "Accessory Enclosed", option PB "Weather Protection Cover"). Alternatively, it can be separately ordered as an accessory; order code 71162242.

15.1.2 Variable flange seal for FMR50/FMR56

Accessory	Description
Variable flange seal for FMR50/FMR56	 A0018871 1 UNI slip-on flange 2 Variable flange seal 3 Nozzle ℹ The material and process conditions of the adjustable flange seal must fit the process properties (temperature, pressure, resistance). ℹ For FMR56: The variable flange seal can also be ordered together with the device (product structure: feature 620 "Accessory Enclosed", options PL, PM, PN, PO, PQ, PR).

Technical data: DN/JIS version			
Order code	71074263	71074264	71074265
Compatible with	DN80 PN10/40	DN100 PN10/16	• DN150 PN10/16 • JIS 10K 150A
Length of screws	100 mm (3.9 in)	100 mm (3.9 in)	110 mm (4.3 in)
Size of screws	M14	M14	M18
Material	EPDM		
Process pressure	−0.1 to 0.1 bar (−1.45 to 1.45 psi)		
Process temperature	−40 to +80 ℃ (−40 to +176 ℉)		
D	142 mm (5.59 in)	162 mm (6.38 in)	218 mm (8.58 in)
d	89 mm (3.5 in)	115 mm (4.53 in)	169 mm (6.65 in)
h	22 mm (0.87 in)	23.5 mm (0.93 in)	26.5 mm (1.04 in)
h_{min}	14 mm (0.55 in)	14 mm (0.55 in)	14 mm (0.55 in)
h_{max}	30 mm (1.18 in)	33 mm (1.3 in)	39 mm (1.45 in)
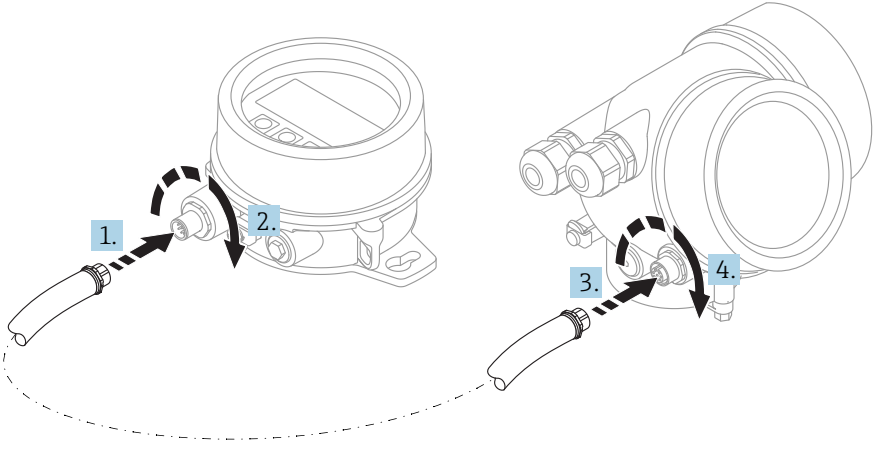

Accessory	Description		
	Technical data: ASME/JIS version		
	Order code	71249070	71249072	71249073
	Compatible with	• ASME 3" 150lbs • JIS 80A 10K	ASME 4" 150lbs	ASME 6" 150lbs
	Length of screws	100 mm (3.9 in)	100 mm (3.9 in)	110 mm (4.3 in)
	Recommended screw size	M14	M14	M18
	Material	EPDM

	Process temperature	−40 to +80 ℃ (−40 to +176 ℉)		
	D	133 mm (5.2 in)	171 mm (6.7 in)	219 mm (8.6 in)
	d	89 mm (3.5 in)	115 mm (4.53 in)	168 mm (6.6 in)
	h	22 mm (0.87 in)	23.5 mm (0.93 in)	26.5 mm (1.04 in)
	h_{min}	14 mm (0.55 in)	14 mm (0.55 in)	14 mm (0.55 in)
	h_{max}	30 mm (1.18 in)	33 mm (1.3 in)	39 mm (1.45 in)

15.1.3 Mounting bracket for wall or ceiling mounting of FMR50/FMR56

Accessory	Description

Mounting bracket for wall or ceiling mounting of FMR50/FMR56	
	
	🖼 *32 Mounting bracket for FMR50/FMR56 with horn antenna*
	
	A Mounting at ceiling
	B Mounting at wall
	
	• **Material:**
	  – Mounting bracket: 304 (1.4301)
	  – Screws: A2
	  – Nordlock washer: A4
	• **Order code:** 71162776
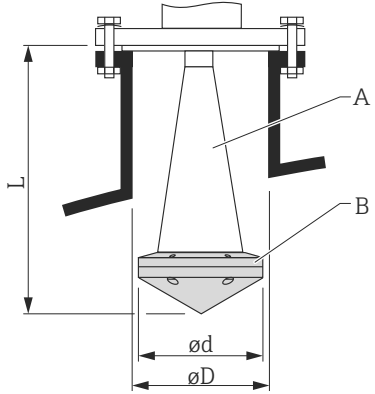

15.1.4   Remote display FHX50

Accessories	Description

Remote display FHX50	
	A0019128
	
	• Material:
	  – Plastic PBT
	  – 316L/1.4404
	  – Aluminum
	• Degree of protection: IP68 / NEMA 6P and IP66 / NEMA 4x
	• Suitable for display modules:
	  – SD02 (push buttons)
	  – SD03 (touch control)
	• Connecting cable:
	  – Cable supplied with device up to 30 m (98 ft)
	  – Standard cable supplied by customer up to 60 m (196 ft)
	• Ambient temperature range: –40 to 80 ℃ (–40 to 176 ℉)
	• Ambient temperature range (option): –50 to 80 ℃ (–58 to 176 ℉) [1]
	
	• If the remote display should be used, order the device version "Prepared for display FHX50" (feature 030, version L, M or N). For the FHX50, you must select option A: "Prepared for display FHX50" under feature 050 "Measuring device version".
	• If the device version "Prepared for display FHX50" was not originally ordered and a FHX50 display is to be retrofitted, you must select version B "Not prepared for display FHX50" under feature 050: "Measuring device version" when ordering the FHX50. In this case, a retrofit kit for the device is supplied with the FHX50. The kit can be used to prepare the device so that the FHX50 can be used.
	
	Use of the FHX50 may be restricted for transmitters with an approval. A device can only be retrofitted with the FHX50 if the option L, M or N ("Prepared for FHX50") is listed under *Basic specifications*, item 4 "Display, operation" in the Safety Instructions (XA) for the device.
	Also pay attention to the Safety Instructions (XA) of the FHX50.
	
	Retrofitting is not possible on transmitters with:
	• An approval for use in areas with flammable dust (dust ignition-proof approval)
	• Ex nA type of protection
	
	For details, see document SD01007F.

1) This range is valid if option JN "Ambient temperature transmitter –50 ℃ (–58 ℉)" has been selected in ordering feature 580 "Test, Certificate". If the temperature is permanently below –40 ℃ (–40 ℉), failure rates may be increased.

15.1.5   Horn protection for horn antenna

Accessory	Description
Horn protection for 80 mm (3 in) or 100 mm (4 in) horn antenna	A0019143 *A* *Horn antenna of the Micropilot (not supplied with the horn protection)* *B* *Horn protection* *Ød* *Diameter of horn protection (see table below)* *ØD* *Minimum nozzle diameter (see table below)* *L* *Length of antenna with horn protection (see table below)* For details please refer to the Mounting Instructions SD01084F. **Process conditions** • Maximum vessel pressure: 0.5 bar (7.252 psi) • Maximum process temperature: 130 ℃ (266 ℉) Danger of explosion Avoid electrostatic charging of the horn protection.

Horn protection for FMR57

Antenna [1]	Order code horn protection	Dimensions antenna + horn protection		
		L	Ød	ØD
BC: Horn 80mm/3"	71105890	238 mm (9.4 in)	96 mm (3.78 in)	≥ DN100
BD: Horn 100mm/4"	71105889	450 mm (17.7 in)	116 mm (4.57 in)	≥ DN150

1)   Feature 070 of the product structure

The horn protection can also be ordered together with the device. Product structure: Feature 610 "Accessory Mounted", option OW "Horn protection, PTFE".

15.1.6   Overvoltage protection

Accessory	Description
Overvoltage protection for 2-wire-devices OVP10 (1 channel) OVP20 (2 channel)	A0021734 **Technical data** • Resistance per channel: $2 * 0.5\ \Omega_{max}$ • Threshold DC voltage: 400 to 700 V • Threshold impulse voltage: < 800 V • Capacitance at 1 MHz: < 1.5 pF • Nominal arrest impulse voltage (8/20 µs): 10 kA • Suited for wire cross-sections: 0.2 to 2.5 mm^2 (24 to 14 AWG) **Ordering with device** The overvoltage protection module is preferably ordered with the device. See product structure, feature 610 "Accessory mounted", option NA "Overvoltage protection". Separate ordering of the module is only necessary if a device is to retrofitted with the overvoltage protection. **Order code for retrofitting** • For 1-channel devices (feature 020, option A) OVP10: 71128617 • For 2-channel devices (feature 020, option B, C, E or G) OVP20 : 71128619 **Hosuing lid for retrofitting** In order to keep the necessary safety distances, the housing lid needs to be replaced if the device is retrofitted with the overvoltage protection. Depending on the housing type, the order code of the suitable lid is as follows: • GT18 housing: Lid 71185516 • GT19 housing: Lid 71185518 • GT20 housing: Lid 71185516 **Restrictions for retrofitting** Depending on the approval of the transmitter the usage of the OVP module may be restricted. A device may only be retrofitted with an OVP module if the option *NA* (overvoltage protection) is quoted under *Optional Specifications* in the Safety Instructions (XA) pertaining to the device. For details refer to SD01090F.

15.1.7   Bluetooth module for HART devices

Accessory	Description
Bluetooth module	A0036493 • Quick and easy commissioning via SmartBlue (app) • No additional tools or adapters required • Signal curve via SmartBlue (app) • Encrypted single point-to-point data transmission (tested by Fraunhofer institue) and password protected communication via Bluetooth® wireless technology • Range under reference conditions: > 10 m (33 ft) ℹ️ When using the Bluetooth module the minimum supply voltage increases by up to 3 V. ℹ️ **Ordering with device** The Bluetooth module is preferably ordered with the device. See product structure, feature 610 "Accessory Mounted", option NF "Bluetooth". A separate order is only necessary in case of retrofitting. ℹ️ **Order code for retrofitting** Bluetooth module (BT10): 71377355 ℹ️ **Restrictions in case of retrofitting** Depending on the approval of the transmitter, application of the Bluetooth module may be restricted. A device may only be retrofitted with a Bluetooth module if the option *NF* (Bluetooth) is listed in the associated Safety Instructions (XA) under *Optional specifications*. ℹ️ For details refer to SD02252F.

15.2 Communication-specific accessories

Accessory	Description
Commubox FXA291	Connects Endress+Hauser field devices with CDI interface (= Endress+Hauser Common Data Interface) to the USB interface of a computer. Order code: 51516983 For details refer to Technical Information TI00405C

15.3 Service-specific accessories

Accessory	Description
DeviceCare SFE100	Configuration tool for HART, PROFIBUS and FOUNDATION Fieldbus devices Technical Information TI01134S • DeviceCare is available for download at www.software-products.endress.com. The download requires a registration in the Endress+Hauser software portal. • Alternatively, a DeviceCare DVD can be ordered with the device. Product structure: Feature 570 "Service", Option IV "Tooling DVD (DeviceCare Setup)".
FieldCare SFE500	FDT-based Plant Asset Management tool. Helps to configure and maintain all field devices of your plant. By supplying status information it also supports the diagnosis of the devices. Technical Information TI00028S

15.4 System components

Accessory	Description
Graphic Data Manager Memograph M	The graphic data manager Memograph M provides information on all the relevant process variables. Measured values are recorded correctly, limit values are monitored and measuring points analyzed. The data are stored in the 256 MB internal memory and also on an SD card or USB stick. For details refer to Technical Information TI00133R and Operating Instructions BA00247R

16.3 "Setup" menu

| • ⑥ : Marks the navigation path to the parameter via the display and operating module.
• ▤ : Marks the navigation path to the parameter via an operating tool (e.g. FieldCare).
• 🔒 : Marks parameters which can be locked via the software locking.

Navigation ⑥▤ Setup

Device tag   🔒

Navigation ⑥▤ Setup → Device tag

Description Enter tag for measuring point.

User entry Up to 32 alphanumerical characters

Factory setting FMR5x

Device address   🔒

Navigation ⑥▤ Setup → Device address

Description • for **Address mode** = **Software**: Enter bus address.
• for **Address mode** = **Hardware**: Displays bus address.

User entry 0 to 126

Factory setting 126

Distance unit   🔒

Navigation ⑥▤ Setup → Distance unit

Description Length unit for distance calculation.

Selection
SI units   *US units*
• mm   • ft
• m   • in

Factory setting m

Bin type	ⓐ

Navigation	◨◧ Setup → Bin type
Prerequisite	Medium type (→ 🖺 122) = Solid
Description	Specify bin type.
Selection	• Buffer silo (fast) • Bin / Pile • Crusher / belt • Silo • Workbench test
Factory setting	Silo

Max. filling speed solid	ⓐ

Navigation	◨◧ Setup → Max. filling speed solid
Prerequisite	Medium type (→ 🖺 122) = Solid
Description	Select expected maximum filling speed.
Selection	• Very slow < 0,5m (1,6ft) /h • Slow < 1m (3,3ft) /h • Standard < 2m (6,5ft) /h • Medium < 4m (13ft) /h • Fast < 8m (26ft) /h • Very fast > 8m (26ft) /h • No filter / test
Factory setting	Standard < 2m (6,5ft) /h
Additional information	The device adjusts the signal evaluation filters and the damping of the output signal to the typical rate of level change defined in this parameter:

Max. filling speed solid (→ 🖺 109)	Step response time / s
Very slow < 0,5m (1,6ft) /h	910
Slow < 1m (3,3ft) /h	730
Standard < 2m (6,5ft) /h	340
Medium < 4m (13ft) /h	170
Fast < 8m (26ft) /h	75
Very fast > 8m (26ft) /h	10
No filter / test	< 1

Max. draining speed solid   ⌂

| | |

| Navigation | �◱◲ Setup → Max. draining speed solid |

| Prerequisite | Medium type (→ 🖺 122) = Solid |

| Description | Select expected maximum draining speed. |

| Selection | • Very slow < 0,5m (1,6ft) /h
• Slow < 1m (3,3ft) /h
• Standard < 2m (6,5ft) /h
• Medium < 4m (13ft) /h
• Fast < 8m (26ft) /h
• Very fast > 8m (26ft) /h
• No filter / test |

| Factory setting | Standard < 2m (6,5ft) /h |

Additional information   The device adjusts the signal evaluation filters and the damping of the output signal to the typical rate of level change defined in this parameter:

Max. draining speed solid (→ 🖺 110)	Step response time / s
Very slow < 0,5m (1,6ft) /h	910
Slow < 1m (3,3ft) /h	730
Standard < 2m (6,5ft) /h	340
Medium < 4m (13ft) /h	170
Fast < 8m (26ft) /h	75
Very fast > 8m (26ft) /h	10
No filter / test	< 1

Empty calibration   ⌂

| Navigation | ◱◲ Setup → Empty calibration |

| Description | Distance process connection to min. level. |

| User entry | Depending on the antenna |

| Factory setting | Depending on the antenna |

Additional information
🖻 *33   Empty calibration (E) for level measurements in bulk solids.*

ℹ️ The measuring range starts at the point at which the radar beam hits the tank or silo bottom. In the case of dished boiler ends or conical outlets levels below this point can not be measured.

Full calibration

Navigation   Setup → Full calibration

Description   Span: max. level - min level.

User entry   Depending on the antenna

Factory setting   Depending on the antenna
Additional information

🖻 *34   Full calibration (F) for level measurements in bulk solids*

Level

Navigation	�📟📖 Setup → Level
Description	Displays measured level L (before linearization).

Additional information
35   Level in case of bulk solid measurements

ℹ The unit is defined in the **Level unit** parameter (→ 📖 123).

Distance

Navigation	�📟📖 Setup → Distance
Description	Displays the measured distance D between the reference point (lower edge of the flange or threaded connection) and the level.

Additional information
36   Distance for bulk solid measurements

ℹ The unit is defined in the **Distance unit** parameter (→ 📖 108).

Signal quality	

Navigation	⊞⊟ Setup → Signal quality
Description	Displays the signal quality of the level echo.

Additional information	**Meaning of the display options**
	• **Strong**
	The evaluated echo exceeds the threshold by at least 10 dB.
	• **Medium**
	The evaluated echo exceeds the threshold by at least 5 dB.
	• **Weak**
	The evaluated echo exceeds the threshold by less than 5 dB.
	• **No signal**
	The device does not find a usable echo.
	
	The signal quality indicated in this parameter always refers to the currently evaluated echo: either the level echo or the tank bottome echo. To differentiate between these two, the quality of the tank bottom echo echo is always displayed in brackets.
	
	  In case of a lost echo (**Signal quality = No signal**) the device generates the following error message:
	  • F941, for **Output echo lost (→ 🗎 136) = Alarm**.
	  • S941, if another option has been selected in **Output echo lost (→ 🗎 136)**.

Confirm distance	🔒

Navigation	⊟ Setup → Confirm distance
Description	Specify, whether the measured distance matches the real distance. Depending on the selection the device automatically sets the range of mapping.
Selection	• Manual map • Distance ok • Distance unknown • Distance too small * • Distance too big * • Tank empty • Factory map
Factory setting	Distance unknown
Additional information	**Meaning of the options** • **Manual map** To be selected if the range of mapping is to be defined manually in the **Mapping end point** parameter (→ 🗎 114). In this case it is not necessary to confirm the distance. • **Distance ok** To be selected if the measured distance matches the actual distance. The device performs a mapping. • **Distance unknown** To be selected if the actual distance is unknown. A mapping can not be performed in this case.

---

* Visibility depends on order options or device settings

- **Distance too small**
  To be selected if the measured distance is smaller than the actual distance. The device searches for the next echo and returns to the **Confirm distance** parameter. The distance is recalculated and displayed. The comparison must be repeated until the displayed distance matches the actual distance. After this, the recording of the map can be started by selecting **Distance ok**.
- **Distance too big** [6]
  To be selected if the measured distance exceeds the actual distance. The device adjusts the signal evaluation and returns to the **Confirm distance** parameter. The distance is recalculated and displayed. The comparison must be repeated until the displayed distance matches the actual distance. After this, the recording of the map can be started by selecting **Distance ok**.
- **Tank empty**
  To be selected if the tank is completely empty. The device records a mapping covering the complete measuring range as defined by the **Tank/silo height** parameter
  (→ 🖺 125). By default, **Tank/silo height** = **Empty calibration**.
  Take into account that in case of conical outlets, for example, a measurement is only possible up to the point at which the radar hits the bottom of the tank or silo. If the **Tank empty** option is used, **Empty calibration** (→ 🖺 110) and **Tank/silo height** may not reach below this point as otherwise the empty signal is suppressed.
- **Factory map**
  To be selected if the present mapping curve (if one exists) is to be deleted. The device returns to the **Confirm distance** parameter and a new mapping can be recorded.

> ℹ️ When operating via the display module, the measured distance is displayed together with this parameter for reference purposes.

> ℹ️ If the teaching procedure with the **Distance too small** option or the **Distance too big** option is quit before the distance has been confirmed, a map is **not** recorded and the teaching procedure is reset after 60 s.

Present mapping	

Navigation	🖳	Setup → Present mapping

Description	Indicates up to which distance a mapping has already been recorded.

Mapping end point	🔒

Navigation	🖳	Setup → Mapping end point

Prerequisite	Confirm distance (→ 🖺 113) = **Manual map** or **Distance too small**

Description	Specify new end of the mapping.
User entry	0.1 to 999 999.9 m

Factory setting	0.1 m

---

6)   Only available for "Expert → Sensor → Echo tracking → **Evaluation mode** parameter" = "Short time history" or "Long time history"

| Additional information | This parameter defines up to which distance the new mapping is to be recorded. The distance is measured from the reference point, i.e. from the lower edge of the mounting flange or the threaded connection. |

For reference purposes the **Present mapping** parameter (→ 🖺 114) is displayed together with this parameter. It indicates up to which distance a mapping has already been recorded.

Record map   🔒

Navigation	▣ Setup → Record map
Prerequisite	Confirm distance (→ 🖺 113) = **Manual map** or **Distance too small**
Description	Start recording of the map.
Selection	▪ No ▪ Record map ▪ Overlay map ▪ Factory map ▪ Delete partial map
Factory setting	No

Additional information	**Meaning of the options**
	▪ **No**
	  The map is not recorded.
	▪ **Record map**
	  The map is recorded. After the recording is completed, the new measured distance and the new mapping range appear on the display. When operating via the local display, these values must be confirmed by pressing ☑.
	▪ **Overlay map**
	  The new mapping curve is generated by overlaying the old and the current envelope curves.
	▪ **Factory map**
	  The factory map stored in the ROM of the device is used.
	▪ **Delete partial map**
	  The mapping curve is deleted up to **Mapping end point** (→ 🖺 114).

16.3.1 "Mapping" wizard

ℹ️ The **Mapping** wizard is only available when operating via the local display. When operating via an operating tool, all parameters concerning the mapping are located directly in the **Setup** menu (→ 🖻 108).

ℹ️ In the **Mapping** wizard two parameters are displayed simultaneously on the display module at any one time. The upper parameter can be edited, whereas the lower parameter is displayed for reference purposes only.

Navigation   🔒   Setup → Mapping

Confirm distance   🔒

Navigation	🔒	Setup → Mapping → Confirm distance
Description	→ 🖻 113	

Mapping end point   🔒

Navigation	🔒	Setup → Mapping → Mapping end point
Description	→ 🖻 114	

Record map   🔒

Navigation	🔒	Setup → Mapping → Record map
Description	→ 🖻 115	

Distance

Navigation	🔒	Setup → Mapping → Distance
Description	→ 🖻 112	

Prepare recording map

Navigation	🔒	Setup → Mapping → Prepare recording map
Description	Indicates the progress of the recording of the map.	

User interface   • Init. recording
                            • In progress
                            • Finished

16.3.2 "Analog input 1 to 6" submenu

ℹ️ There is an **Analog input** submenu for each AI block of the device. The AI block is used to configure the measured value transmission to the bus.

Only the most basic properties of the AI blocks can be configured in this submenu. For a detailed configuration of the AI blocks refer to Expert → Analog inputs → Analog input 1 to 6.

Navigation   🔲   Expert → Analog inputs → Analog input 1 to 6

Channel	🔒

Navigation	🔘🔲 Expert → Analog inputs → Analog input 1 to 6 → Channel
Description	Standard parameter **CHANNEL** of the Analog Input Block according to the PROFIBUS Profile.
Selection	• Level linearized • Distance • Terminal voltage • Electronic temperature • Absolute echo amplitude • Relative echo amplitude • Sensor debug • Analog output adv. diagnostics 1 • Analog output adv. diagnostics 2
Factory setting	Level linearized
Additional information	Allocates a measured value to the AI block.

PV filter time	🔒

Navigation	🔘🔲 Expert → Analog inputs → Analog input 1 to 6 → PV filter time
Description	Standard parameter **PV_FTIME** of the Analog Input Block according to the PROFIBUS profile.
User entry	Positive floating-point number
Factory setting	0
Additional information	This parameter defines the damping constant τ (in seconds) for the output of the Analog Input Block.

Fail safe type	🔒

Navigation	🔘🖥 Expert → Analog inputs → Analog input 1 to 6 → Fail safe type
Description	Standard parameter **FSAFE_TYPE** of the Analog Input Block according to the PROFIBUS profile.
Selection	• Fail safe value • Fallback value • Off
Factory setting	Off

Additional information	**Meaning of the options**
	This parameter specifies the output value of the Analog Input block in the event of an error.
	• **Fail safe value**
	  The output value in the event of an error is defined in the **Fail safe value** parameter (→ 🖹 119).
	• **Fallback value**
	  The last output value that was valid before the error occurred is retained.
	• **Off**
	  The output value follows the current measured value. The status is set to BAD.

Fail safe value	🔒

Navigation	🔘🖥 Expert → Analog inputs → Analog input 1 to 6 → Fail safe value
Prerequisite	Fail safe type (→ 🖹 119) = **Fail safe value**
Description	Standard parameter **FSAFE_VALUE** of the Analog Input Block according to the PROFIBUS profile.
User entry	Signed floating-point number
Factory setting	0
Additional information	This parameter defines the output value of the Analog Input Block in case of an error.

16.3.3   "Advanced setup" submenu

Navigation   Setup → Advanced setup

Locking status

Navigation	Setup → Advanced setup → Locking status
Description	Indicates the write protection with the highest priority that is currently active.
User interface	• Hardware locked • SIL locked • WHG locked • Temporarily locked
Additional information	**Meaning and priorities of the types of write protection** • **Hardware locked (priority 1)** The DIP switch for hardware locking is activated on the main electronics module. This locks write access to the parameters. • **SIL locked (priority 2)** The SIL mode is activated. Writing access to the relevant parameters is denied. • **WHG locked (priority 3)** The WHG mode is activated. Writing access to the relevant parameters is denied. • **Temporarily locked (priority 4)** Write access to the parameters is temporarily locked on account of internal processes in progress in the device (e.g. data upload/download, reset etc.). The parameters can be modified as soon as the processes are complete.

On the display module, the 🔒-symbol appears in front of parameters that cannot be modified since they are write-protected.
Access status tooling

Navigation	Setup → Advanced setup → Access status tooling
Description	Shows the access authorization to the parameters via the operating tool.
Additional information	The access authorization can be changed via the **Enter access code** parameter (→ 🖹 121).

If additional write protection is active, this restricts the current access authorization even further. The write protection status can be viewed via the **Locking status** parameter (→ 🖹 120).

Access status display

Navigation	⌨ Setup → Advanced setup → Access status display
Prerequisite	The device has a local display.
Description	Indicates access authorization to parameters via local display.
Additional information	ℹ The access authorization can be changed via the **Enter access code** parameter (→ 📄 121).
	ℹ If additional write protection is active, this restricts the current access authorization even further. The write protection status can be viewed via the **Locking status** parameter (→ 📄 120).

Enter access code

Navigation	⌨ Setup → Advanced setup → Enter access code
Description	Enter access code to disable write protection of parameters.
User entry	0 to 9999
Additional information	• For local operation, the customer-specific access code, which has been defined in the **Define access code** parameter (→ 📄 156), has to be entered.
	• If an incorrect access code is entered, the user retains his current access authorization.
	• The write protection affects all parameters marked with the 🔒-symbol in this document. On the local display, the 🔒-symbol in front of a parameter indicates that the parameter is write-protected.
	• If no key is pressed for 10 min, or the user switches from the navigation and editing mode back to the measured value display mode, the device automatically locks the write-protected parameters after another 60 s.
	ℹ Please contact your Endress+Hauser Sales Center if you lose your access code.

"Level" submenu

Navigation   ⊞⊟   Setup → Advanced setup → Level

Medium type	⊡

Navigation	⊞⊟ Setup → Advanced setup → Level → Medium type

Description	Specify type of medium.

User interface	• Liquid • Solid

Factory setting	FMR56, FMR57: **Solid**

Additional information	ℹ️ This parameter determines the value of several other parameters and strongly influences the complete signal evaluation. Therefore, it is strongly recommended **not to change** the factory setting.

Medium property	⊡

Navigation	⊞⊟ Setup → Advanced setup → Level → Medium property
Description	Specify relative dielectric constant ε_r of the medium.

Selection	• Unknown • DC 1.4 … 1.6 • DC 1.6 … 1.9 • DC 1.9 … 2.5 • DC 2.5 … 4 • DC 4 … 7 • DC 7 … 15 • DC > 15

Factory setting	Dependent on **Medium type (→ 🔲 122)** and **Medium group**.

Additional information	*Dependency on "Medium type" and "Medium group"*

Medium type (→ 🔲 122)	Medium group	Medium property
Solid		Unknown
Liquid	Water based (DC >= 4)	DC 4 … 7
	Others	Unknown

ℹ️ For dielectric constants (DC values) of many media commonly used in various industries refer to:
• the Endress+Hauser DC manual (CP01076F)
• the Endress+Hauser "DC Values App" (available for Android and iOS)

Advanced process conditions	🔒

Navigation	🔲🔳 Setup → Advanced setup → Level → Advanced process conditions
Description	Specify additional process conditions (if required).
Selection	• Many obstacles • Weak signal
Factory setting	None

Additional information   *"Many obstacles" option*

This option otimizes the signal evaluation for bulk solid applications with a large measuring range where obstacles generate many interference echos. With this selection the last echo in the envelope curve will always be evaluated. For strongly damping media this is always the level echo.

ℹ️ The **Many obstacles** option is only available for bulk solid applications (FMR56, FMR57).

ℹ️ Preconditions for the application of the "Many obstacles" option
- **Medium type (→ 🖺 122)** = **Solid**
  - Strongly damping medium (e.g. flour, wheat, cereals, ...)
  - No multiple echos if the tank is full
  - Interference echo suppression only in the near field (ringing area)
  - Expert → Sensor → Echo tracking → Evaluation mode = Short time history

"Weak signal" option

This option improves the detectability of small level echos in bulk solid applications with very weak signal amplitudes.

ℹ️ The **Weak signal** option is only available for bulk solid measurements (FMR56, FMR57).

Level unit	🔒

Navigation	🔲🔳 Setup → Advanced setup → Level → Level unit
Description	Select level unit.

Selection	*SI units* • % • m • mm	*US units* • ft • in

Factory setting	%

Additional information   The level unit may differ from the distance unit defined in the **Distance unit** parameter (→ 🖺 108):

- The unit defined in the **Distance unit** parameter is used for the basic calibration (**Empty calibration (→ 🖺 110)** and **Full calibration (→ 🖺 111)**).
- The unit defined in the **Level unit** parameter is used to display the (unlinearized) level.

Blocking distance	🔒

Navigation	🔁🖥 Setup → Advanced setup → Level → Blocking distance
Description	Specify blocking distance BD.
User entry	0 to 200 m
Factory setting	FMR56, FMR57: antenna length + 400 mm (15.7 in)
Additional information	Signals in the blocking distance are only evaluated if they have been outside the blocking distance when the device was switched on and move into the blocking distance due to a level change during operation. Signals which are already in the blocking distance when the device is switched on, are ignored.

> ℹ️ This behavior is only valid if the following two conditions are met:
> - Expert → Sensor → Echo tracking → Evaluation mode = **Short time history** or **Long time history**
> - Expert → Sensor → Gas phase compensation → GPC mode= **On**, **Without correction** or **External correction**
>
> If one of these conditions is not met, signals in the blocking distance will always be ignored.

> ℹ️ If required, a different behavior for signals in the blocking distance can be defined by the Endress+Hauser service.

🖼 37   Blocking distance (BD) for bulk solid measurements

Level correction	🔒

Navigation	🔁🖥 Setup → Advanced setup → Level → Level correction
Description	Specify level correction (if required).
User entry	−200 000.0 to 200 000.0 %
Factory setting	0.0 %

Additional information   The value specified in this parameter is added to the measured level (before linearization).

Tank/silo height	Ⓐ

Navigation   ⓐⓔ   Setup → Advanced setup → Level → Tank/silo height

Description   Specify total height of the tank or silo as measured from the process connection.

User entry   –999.9999 to 999.9999 m

Factory setting   Empty calibration (→ 🖹 110)

Additional information   If the parametrized measuring range (**Empty calibration** (→ 🖹 110)) differs significantly from the tank or silo height, it is recommended to enter the tank or silo height. Example: Continuous level monitoring in the upper third of a tank or silo.
🖻 38   "Tank/silo height" parameter (→ 🖹 125)' for measurements in bulk solids

E   Empty calibration (→ 🖹 110)
H   Tank/silo height (→ 🖹 125)

ℹ️ For tanks with conical outlet, **Tank/silo height** should not be changed as in this type of applications **Empty calibration** (→ 🖹 110) is usually **not** << the tank or silo height.

"Linearization" submenu
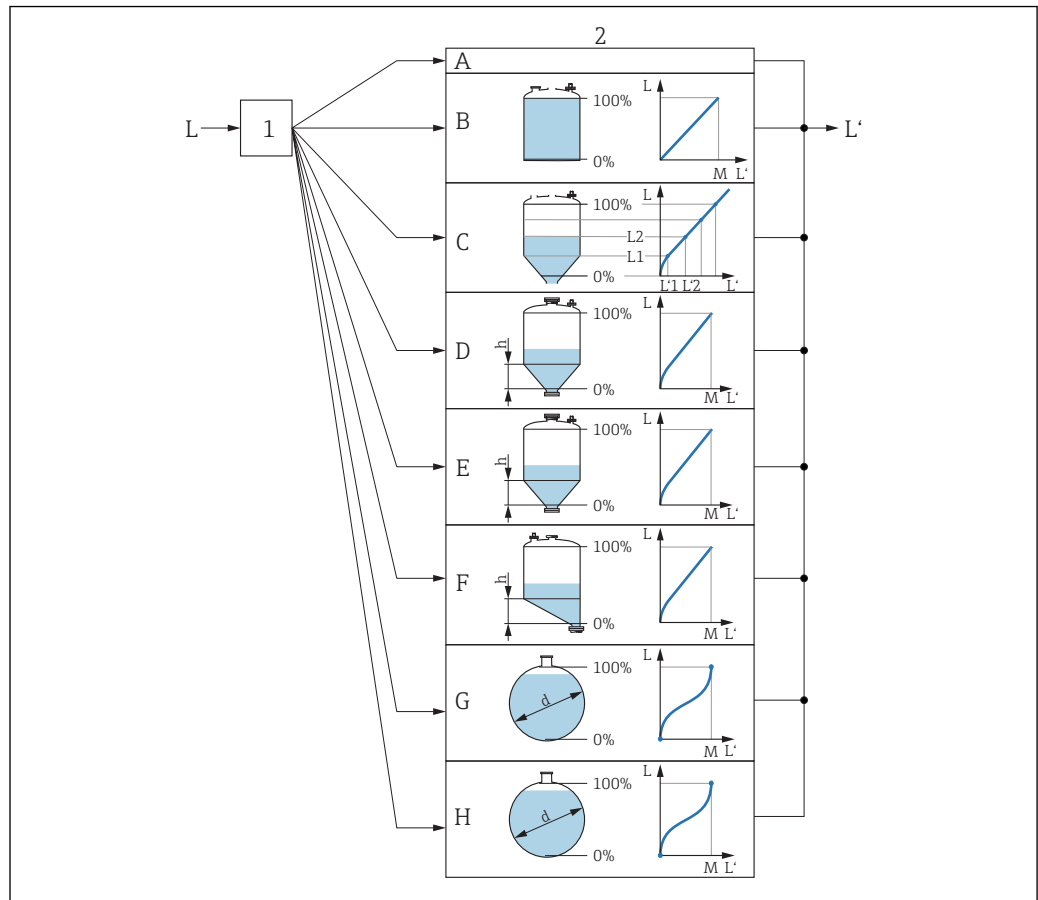

39   Linearization: Transformation of the level and (if relevant) the interface height into a volume or weight; the transformation is dependent on the shape of the vessel.

1   Selection of linearization type and unit
2   Configuration of the linearization
A   Linearization type (→ 🖺 129) = None
B   Linearization type (→ 🖺 129) = Linear

Description of parameters

Navigation   ⊕⊟   Setup → Advanced setup → Linearization

Linearization type	🔒

Navigation   ⊕⊟   Setup → Advanced setup → Linearization → Linearization type

Description   Select linearization type.

Selection
- None
- Linear
- Table
- Pyramid bottom
- Conical bottom
- Angled bottom
- Horizontal cylinder
- Sphere

Factory setting   None

Additional information
🖻 *40   Linearization types*

A   None
B   Table
C   Pyramid bottom
D   Conical bottom
E   Angled bottom
F   Sphere
G   Horizontal cylinder

Meaning of the options

- **None**
The level is transmitted in the level unit without linearization.
- **Linear**
The output value (volume/weight) is directly proportional to the level L. This is valid, for example, for vertical cylinders. The following additional parameters have to be specified:
  - **Unit after linearization** (→ 🖹 130)
  - **Maximum value** (→ 🖹 132): Maximum volume or weight
- **Table**
The relationship between the measured level L and the output value (volume/weight) is given by a linearization table consisting of up to 32 pairs of values "level - volume" or "level - weight", respectively. The following additional parameters have to be specified:
  - **Unit after linearization** (→ 🖹 130)
  - **Table mode** (→ 🖹 133)
  - For each table point: **Level** (→ 🖹 134)
  - For each table point: **Customer value** (→ 🖹 135)
  - **Activate table** (→ 🖹 135)
- **Pyramid bottom**
The output value corresponds to the volume or weight in a silo with pyramid bottom. The following additional parameters have to be specified:
  - **Unit after linearization** (→ 🖹 130)
  - **Maximum value** (→ 🖹 132): Maximum volume or weight
  - **Intermediate height** (→ 🖹 132): The height of the pyramid
- **Conical bottom**
The output value corresponds to the volume or weight in a tank with conical bottom. The following additional parameters have to be specified:
  - **Unit after linearization** (→ 🖹 130)
  - **Maximum value** (→ 🖹 132): Maximum volume or weight
  - **Intermediate height** (→ 🖹 132): The height of the conical part of the tank
- **Angled bottom**
The output value corresponds to the volume or weight in a silo with an angled bottom. The following additional parameters have to be specified:
  - **Unit after linearization** (→ 🖹 130)
  - **Maximum value** (→ 🖹 132): Maximum volume or weight
  - **Intermediate height** (→ 🖹 132): Height of the angled bottom
- **Horizontal cylinder**
The output value corresponds to the volume or weight in a horizontal cylinder. The following additional parameters have to be specified:
  - **Unit after linearization** (→ 🖹 130)
  - **Maximum value** (→ 🖹 132): Maximum volume or weight
  - **Diameter** (→ 🖹 132)
- **Sphere**
The output value corresponds to the volume or weight in a spherical tank. The following additional parameters have to be specified:
  - **Unit after linearization** (→ 🖹 130)
  - **Maximum value** (→ 🖹 132): Maximum volume or weight
  - **Diameter** (→ 🖹 132)

Unit after linearization   🔒

Navigation   🔲🔳 Setup → Advanced setup → Linearization → Unit after linearization

Prerequisite   **Linearization type** (→ 🖹 129) ≠ None

Description   Select unit of the lineaized value.

Selection	*SI units* • STon • t • kg • cm³ • dm³ • m³ • hl • l • % *Custom-specific units* Free text	*US units* • lb • UsGal • ft³	*Imperial units* impGal

Factory setting	%

Additional information	The selected unit is only used to be indicated on the display. The measured value is **not** transformed according to the selected unit.

It is also possible to configure a distance-to-distance linearization, i.e. a transformation from the level unit to a different distance unit. To do so, select the **Linear** linearization mode. In order to define the new level unit, select the **Free text** option in the **Unit after linearization** parameter and enter the required unit into the **Free text** parameter (→ 🖺 131).

Free text

Navigation	🖩🖳 Setup → Advanced setup → Linearization → Free text
Prerequisite	Unit after linearization (→ 🖺 130) = **Free text**
Description	Enter unit symbol.
User entry	Up to 32 alphanumerical characters (letters, numbers, special characters)
Factory setting	Free text

Level linearized

Navigation	🖳 Setup → Advanced setup → Linearization → Level linearized
Description	Displays linearized level.
Additional information	ℹ️ The unit is defined by the **Unit after linearization** parameter → 🖺 130.

Maximum value	🔒

Navigation	🎛🖊 Setup → Advanced setup → Linearization → Maximum value
Prerequisite	Linearization type (→ 🖺 129) has one of the following values: • Linear • Pyramid bottom • Conical bottom • Angled bottom • Horizontal cylinder • Sphere
User entry	–50 000.0 to 50 000.0 %
Factory setting	100.0 %

Diameter	🔒

Navigation	🎛🖊 Setup → Advanced setup → Linearization → Diameter
Prerequisite	Linearization type (→ 🖺 129) has one of the following values: • Horizontal cylinder • Sphere
User entry	0 to 9 999.999 m
Factory setting	2 m
Additional information	The unit is defined in the **Distance unit** parameter (→ 🖺 108).

Intermediate height	🔒

Navigation	🎛🖊 Setup → Advanced setup → Linearization → Intermediate height
Prerequisite	Linearization type (→ 🖺 129) has one of the following values: • Pyramid bottom • Conical bottom • Angled bottom
User entry	0 to 200 m
Factory setting	0 m

Additional information
H   Intermediate height

The unit is defined in the **Distance unit** parameter (→ 🖺 108).

Table mode	🔒

Navigation   🔀🔲 Setup → Advanced setup → Linearization → Table mode

Prerequisite   Linearization type (→ 🖺 129) = **Table**

Description   Select editing mode of the linearization table.

Selection   • Manual
                            • Semiautomatic *
                            • Clear table
                            • Sort table

Factory setting   Manual
Additional information **Meaning of the options**
                            • **Manual**
                              The level and the associated linearized value are entered manually for each linearization point.
                            • **Semiautomatic**
                              The level is measured by the device for each linearization point. The associated linearized value is entered manually.
                            • **Clear table**
                              Deletes the existing linearization table.
                            • **Sort table**
                              Rearranges the linerization points into an ascending order.

---

* Visibility depends on order options or device settings

Conditions the linearization table must meet:
• The table may consist of up to 32 pairs of values "Level - Linearized Value".
• The table must be monotonic (monotonically increasing or decreasing).
• The first linearization point must refer to the minimum level.
• The last linearization point must refer to the maximum level.

Before entering a linearization table, the values for **Empty calibration (→ 🖹 110)** and **Full calibration (→ 🖹 111)** must be set correctly.

If values of the table need to be changed after the full or empty calibration have been changed, a correct evaluation is only ensured if the existing table is deleted and the complete table is entered again. To do so delete the existing table (**Table mode (→ 🖹 133) = Clear table**). Then enter a new table.

How to enter the table
• Via FieldCare
The table points can be entered via the **Table number (→ 🖹 134)**, **Level (→ 🖹 134)** and **Customer value (→ 🖹 135)** parameters. As an alternative, the graphic table editor may be used: Device Operation → Device Functions → Additional Functions → Linearization (Online/Offline)
• Via local display
Select the **Edit table** submenu to call up the graphic table editor. The table is displayed and can be edited line by line.
The factory setting for the level unit is "%". If you want to enter the linearization table in physical units, you must select the appropriate unit in the **Level unit** parameter (→ 🖹 123) beforehand.

Table number	🔒

Navigation	☐ Setup → Advanced setup → Linearization → Table number
Prerequisite	**Linearization type (→ 🖹 129) = Table**
Description	Select table point you are going to enter or change.
User entry	1 to 32
Factory setting	1

Level (Manual)	🔒

Navigation	☐ Setup → Advanced setup → Linearization → Level
Prerequisite	• **Linearization type (→ 🖹 129) = Table** • **Table mode (→ 🖹 133) = Manual**
Description	Enter level value of the table point (value before linearization).
User entry	Signed floating-point number

Factory setting   0 %

| Level (Semiautomatic) |

Navigation   ⊟   Setup → Advanced setup → Linearization → Level

Prerequisite   • **Linearization type (→ 🗏 129) = Table**
                        • **Table mode (→ 🗏 133) = Semiautomatic**

Description   Displays measured level (value before linearization). This value is transmitted to the table.

| Customer value   🔒 |

Navigation   ⊟   Setup → Advanced setup → Linearization → Customer value

Prerequisite   **Linearization type (→ 🗏 129) = Table**

Description   Enter linearized value for the table point.

User entry   Signed floating-point number

Factory setting   0 %

| Activate table   🔒 |

Navigation   ⊟⊞   Setup → Advanced setup → Linearization → Activate table

Prerequisite   **Linearization type (→ 🗏 129) = Table**

Description   Activate (enable) or deactivate (disable) the linearization table.

Selection   • Disable
                        • Enable

Factory setting   Disable

Additional information **Meaning of the options**
                        • **Disable**
                          The measured level is not linearized.
                          If **Linearization type (→ 🗏 129) = Table** at the same time, the device issues error
                          message F435.
                        • **Enable**
                          The measured level is linearized according to the table.

                        ⓘ When editing the table, the **Activate table** parameter is automatically reset to
                           Disable and must be reset to **Enable** after the table has been entered.

"Safety settings" submenu

Navigation   @@ Setup → Advanced setup → Safety settings

Output echo lost	🔒

Navigation	@@ Setup → Advanced setup → Safety settings → Output echo lost
Description	Output signal in case of a lost echo.
Selection	• Last valid value • Ramp at echo lost • Value echo lost • Alarm
Factory setting	Last valid value

Additional information	**Meaning of the options**
	• **Last valid value**
	  The last valid value is kept in the case of a lost echo.
	• **Ramp at echo lost** [7]
	  In the case of a lost echo the output value is continously shifted towards 0% or 100%.
	  The slope of the ramp is defined in the **Ramp at echo lost** parameter (→ 🗎 137).
	• **Value echo lost** [7]
	  In the case of a lost echo the output assumes the value defined in the **Value echo lost** parameter (→ 🗎 136).
	• **Alarm**
	  In the case of a lost echo the device generates an alarm; see the **Failure mode** parameter

Value echo lost	🔒

Navigation	@@ Setup → Advanced setup → Safety settings → Value echo lost
Prerequisite	Output echo lost (→ 🗎 136) = Value echo lost
Description	Output value in case of a lost echo
User entry	0 to 200 000.0 %
Factory setting	0.0 %
Additional information	Use the unit which has been defined for the measured value output: • without linearization: **Level unit** (→ 🗎 123) • with linearization: **Unit after linearization** (→ 🗎 130)

---

7)   Only visible if "Linearization type (→ 🗎 129)" = "None"

Ramp at echo lost   🔒

Navigation	🎛🖥 Setup → Advanced setup → Safety settings → Ramp at echo lost
Prerequisite	Output echo lost (→ 🖺 136) = **Ramp at echo lost**
Description	Slope of the ramp in the case of a lost echo
User entry	Signed floating-point number
Factory setting	0.0 %/min
Additional information	
A0013269

A   Delay time echo lost
B   Ramp at echo lost (→ 🖺 137) (positive value)
C   Ramp at echo lost (→ 🖺 137) (negative value)

- The unit for the slope of the ramp is "percentage of the measuring range per minute" (%/min).
- For a negative slope of the ramp: The measured value is continuously decreased until it reaches 0%.
- For a positive slope of the ramp: The measured value is continuosly increased until it reaches 100%.

Blocking distance   🔒

Navigation	🎛🖥 Setup → Advanced setup → Safety settings → Blocking distance
Description	Specify blocking distance BD.
User entry	0 to 200 m
Factory setting	FMR56, FMR57: antenna length + 400 mm (15.7 in)
Additional information	Signals in the blocking distance are only evaluated if they have been outside the blocking distance when the device was switched on and move into the blocking distance due to a

level change during operation. Signals which are already in the blocking distance when the device is switched on, are ignored.

This behavior is only valid if the following two conditions are met:
- Expert → Sensor → Echo tracking → Evaluation mode = **Short time history** or **Long time history**
- Expert → Sensor → Gas phase compensation → GPC mode= **On**, **Without correction** or **External correction**

If one of these conditions is not met, signals in the blocking distance will always be ignored.

If required, a different behavior for signals in the blocking distance can be defined by the Endress+Hauser service.

🖼 41   Blocking distance (BD) for bulk solid measurements

"WHG confirmation" wizard

The **WHG confirmation** wizard is only available for devices with WHG approval (Feature 590: "Additional Approval", option LC: "WHG overfill prevention") which are currently not in the WHG-locked state.

The **WHG confirmation** wizard is used to lock the device according to WHG. For details refer to the "Functional Safety Manual" of the respective device, which describes the locking procedure and the parameters of the sequence.

Navigation   Setup → Advanced setup → WHG confirmation

"Deactivate WHG" wizard

ℹ️ The **Deactivate WHG** wizard (→ 🖺 140) is only visible if the device is WHG-locked. For details refer to the "Functional Safety Manual" of the respective device.

Navigation   🖩🗒 Setup → Advanced setup → Deactivate WHG

Reset write protection   🔒

Navigation   🖩🗒 Setup → Advanced setup → Deactivate WHG → Reset write protection

Description   Enter unlocking code.

User entry   0 to 65 535

Factory setting   0

Code incorrect   🔒

Navigation   🖩🗒 Setup → Advanced setup → Deactivate WHG → Code incorrect

Description   Indicates that a wrong unlocking code has been entered. Select procedure.

Selection   • Reenter code
                                • Abort sequence

Factory setting   Reenter code

"Switch output" submenu

The **Switch output** submenu (→ 🗏 141) is only visible for devices with switch output. [8]

Navigation   🔊🖳 Setup → Advanced setup → Switch output

Switch output function   🔒

Navigation	🔊🖳 Setup → Advanced setup → Switch output → Switch output function
Description	Select function for switch output.
Selection	• Off • On • Diagnostic behavior • Limit • Digital Output
Factory setting	Off

Additional information   **Meaning of the options**

• **Off**
  The output is always open (non-conductive).
• **On**
  The output is always closed (conductive).
• **Diagnostic behavior**
  The output is normally closed and is only opened if a diagnostic event is present. The
  Assign diagnostic behavior parameter (→ 🗏 142) determines for which type of event
  the output is opened.
• **Limit**
  The output is normally closed and is only opened if a measured variable exceeds or falls
  below a defined limit. The limit values are defined by the following parameters:
  – **Assign limit** (→ 🗏 142)
  – **Switch-on value** (→ 🗏 143)
  – **Switch-off value** (→ 🗏 144)
• **Digital Output**
  The switching state of the output tracks the output value of a DI function block. The
  function block is selected in the **Assign status** parameter (→ 🗏 141).

The **Off** and **On** options can be used to simulate the switch output.

Assign status   🔒

Navigation	🔊🖳 Setup → Advanced setup → Switch output → Assign status
Prerequisite	Switch output function (→ 🗏 141) = Digital Output
Description	Select device status for switch output.

---

8)   Ordering feature 020 "Power supply; Output", option B, E or G

Selection	• Off
	• Digital output AD 1
	• Digital output AD 2
	• Digital output 1
	• Digital output 2
	• Digital output 3
	• Digital output 4

Factory setting	Off

Additional information	The **Digital output AD 1** and **Digital output AD 2** options refer to the Advanced Diagnostic Blocks. A switch signal generated in these blocks can be transmitted via the switch output.

Assign limit

Prerequisite	Switch output function (→ 🗎 141) = **Limit**

Selection	• Off
	• Level linearized
	• Distance
	• Terminal voltage
	• Electronic temperature
	• Relative echo amplitude
	• Area of incoupling

Factory setting	Off

Assign diagnostic behavior

Navigation	🔲🔲 Setup → Advanced setup → Switch output → Assign diagnostic behavior

Prerequisite	Switch output function (→ 🗎 141) = **Diagnostic behavior**

Description	Select diagnostic behavior for switch output.

Selection	• Alarm
	• Alarm or warning
	• Warning

Factory setting	Alarm

Switch-on value	🔒

Navigation	🔲🔳 Setup → Advanced setup → Switch output → Switch-on value
Prerequisite	**Switch output function (→ 🖿 141)** = **Limit**
Description	Enter measured value for the switch-on point.
User entry	Signed floating-point number
Factory setting	0
Additional information	The switching behavior depends on the relative position of the **Switch-on value** and **Switch-off value** parameters:

Switch-on value > Switch-off value
– The output is closed if the measured value is larger than **Switch-on value**.
– The output is opened if the measured value is smaller than **Switch-off value**.
A   Switch-on value
B   Switch-off value
C   Output closed (conductive)
D   Output opened (non-conductive)

Switch-on value < Switch-off value
– The output is closed if the measured value is smaller than **Switch-on value**.
– The output is opened if the measured value is larger than **Switch-off value**.
A0015586

A Switch-on value
B Switch-off value
C Output closed (conductive)
D Output opened (non-conductive)

Switch-on delay

Navigation	🖩🖵 Setup → Advanced setup → Switch output → Switch-on delay
Prerequisite	• Switch output function (→ 🖻 141) = **Limit** • Assign limit (→ 🖻 142) ≠ **Off**
Description	Define delay for the switch-on of status output.
User entry	0.0 to 100.0 s
Factory setting	0.0 s

Switch-off value

Navigation	🖩🖵 Setup → Advanced setup → Switch output → Switch-off value
Prerequisite	Switch output function (→ 🖻 141) = **Limit**
Description	Enter measured value for the switch-off point.
User entry	Signed floating-point number
Factory setting	0
Additional information	The switching behavior depends on the relative position of the **Switch-on value** and **Switch-off value** parameters; description: see the **Switch-on value** parameter (→ 🖻 143).

Switch-off delay	⌨

Navigation	⌨⌨ Setup → Advanced setup → Switch output → Switch-off delay
Prerequisite	• Switch output function (→ ◨ 141) = **Limit** • Assign limit (→ ◨ 142) ≠ **Off**
Description	Define delay for the switch-off of status output.
User entry	0.0 to 100.0 s
Factory setting	0.0 s

Failure mode	⌨

Navigation	⌨⌨ Setup → Advanced setup → Switch output → Failure mode
Prerequisite	Switch output function (→ ◨ 141) = **Limit** or **Digital Output**
Description	Define output behavior in alarm condition.
Selection	• Actual status • Open • Closed
Factory setting	Open
Additional information	

Switch status	

Navigation	⌨⌨ Setup → Advanced setup → Switch output → Switch status
Description	Shows the current switch output status.

Invert output signal	⌨

Navigation	⌨⌨ Setup → Advanced setup → Switch output → Invert output signal
Description	Invert the output signal.
Selection	• No • Yes
Factory setting	No

Additional information   Meaning of the options
• **No**
  The behavior of the switch output is as described above.
• **Yes**
  The states **Open** and **Closed** are inverted as compared to the description above.

"Display" submenu

ℹ️ The **Display** submenu is only visible if a display module is connected to the device.

Navigation   ⊞⊟   Setup → Advanced setup → Display

Language

Navigation	⊞⊟ Setup → Advanced setup → Display → Language
Description	Set display language.
Selection	• English • Deutsch [*] • Français [*] • Español [*] • Italiano [*] • Nederlands [*] • Portuguesa [*] • Polski [*] • русский язык (Russian) [*] • Svenska [*] • Türkçe [*] • 中文 (Chinese) [*] • 日本語 (Japanese) [*] • 한국어 (Korean) [*] • Bahasa Indonesia [*] • tiếng Việt (Vietnamese) [*] • čeština (Czech) [*]
Factory setting	The language selected in feature 500 of the product structure. If no language has been selected: **English**
Additional information	

Format display

Navigation	⊞⊟ Setup → Advanced setup → Display → Format display
Description	Select how measured values are shown on the display.
Selection	• 1 value, max. size • 1 bargraph + 1 value • 2 values • 1 value large + 2 values • 4 values
Factory setting	1 value, max. size

---

* Visibility depends on order options or device settings

Additional information
A0019963

🖼 *42   "Format display" = "1 value, max. size"*
A0019964

🖼 *43   "Format display" = "1 bargraph + 1 value"*
A0019965

🖼 *44   "Format display" = "2 values"*
A0019966

🖼 *45   "Format display" = "1 value large + 2 values"*
A0019968

🖼 *46   "Format display" = "4 values"*

- The **Value 1 to 4 display** → 🖺 149 parameters specify which measured values are shown on the display and in which order.
- If more measured values are specified than the current display mode permits, the values alternate on the device display. The display time until the next change is configured in the **Display interval** parameter (→ 🖺 149).

Value 1 to 4 display	🔒

Navigation	🞅🞕 Setup → Advanced setup → Display → Value 1 display
Description	Select the measured value that is shown on the local display.
Selection	• Level linearized • Distance • Terminal voltage • Electronic temperature • Absolute echo amplitude • Relative echo amplitude • Analog output adv. diagnostics 1 • Analog output adv. diagnostics 2 • Analog output 1 • Analog output 2 • Analog output 3 • Analog output 4 • Area of incoupling
Factory setting	• Value 1 display: Level linearized • Value 2 display: None • Value 3 display: None • Value 4 display: None

Decimal places 1 to 4	🔒

Navigation	🞅🞕 Setup → Advanced setup → Display → Decimal places 1
Description	Select the number of decimal places for the display value.
Selection	• x • x.x • x.xx • x.xxx • x.xxxx
Factory setting	x.xx
Additional information	The setting does not affect the measuring or computational accuracy of the device.

Display interval	

Navigation	🞅🞕 Setup → Advanced setup → Display → Display interval
Description	Set time measured values are shown on display if display alternates between values.
User entry	1 to 10 s

Factory setting	5 s
Additional information	This parameter is only relevant if the number of selected measuring values exceeds the number of values the selected display format can display simultaneously.

Display damping	⌂

Navigation	🔊🖳 Setup → Advanced setup → Display → Display damping
Description	Set display reaction time to fluctuations in the measured value.
User entry	0.0 to 999.9 s
Factory setting	0.0 s

Header	⌂

Navigation	🔊🖳 Setup → Advanced setup → Display → Header
Description	Select header contents on local display.
Selection	• Device tag • Free text
Factory setting	Device tag
Additional information	
1   Position of the header text on the display

Meaning of the options

• **Device tag**
Is defined in the **Device tag** parameter
• **Free text**
Is defined in the **Header text** parameter (→ 📄 150)

Header text	⌂

Navigation	🔊🖳 Setup → Advanced setup → Display → Header text
Prerequisite	Header (→ 📄 150) = **Free text**

Description	Enter display header text.

Factory setting	------------

Additional information	The number of characters which can be displayed depends on the characters used.

Separator   🔒

Navigation	🔘🖳 Setup → Advanced setup → Display → Separator

Description	Select decimal separator for displaying numerical values.

Selection	• .
	• ,

Factory setting	.

Number format   🔒

Navigation	🔘🖳 Setup → Advanced setup → Display → Number format

Description	Choose number format for the display.

Selection	• Decimal
	• ft-in-1/16"

Factory setting	Decimal

Additional information	The ft-in-1/16" option is only valid for distance units.

Decimal places menu   🔒

Navigation	🔘🖳 Setup → Advanced setup → Display → Decimal places menu

Description	Select number of decimal places for the representation of numbers within the operating menu.

Selection	• x
	• x.x
	• x.xx
	• x.xxx
	• x.xxxx

Factory setting	x.xxxx

Additional information	• Is only valid for numbers in the operating menu (e.g. **Empty calibration**, **Full calibration**), but not for the measured value display. The number of decimal places for the measured value display is defined in the **Decimal places 1 to 4** → 🖹 149 parameters. • The setting does not affect the accuracy of the measurement or the calculations.

Backlight

Navigation	🗐🖩 Setup → Advanced setup → Display → Backlight
Prerequisite	The device has the SD03 local display (with optical keys).
Description	Switch the local display backlight on and off.
Selection	• Disable • Enable
Factory setting	Disable

Additional information	**Meaning of the options**
	• **Disable**
	   Switches the backlight off.
	• **Enable**
	   Switches the backlight on.
	
	🛈 Regardless of the setting in this parameter the backlight may be automatically switched off by the device if the supply voltage is too low.

Contrast display

Navigation	🗐🖩 Setup → Advanced setup → Display → Contrast display
Description	Adjust local display contrast setting to ambient conditions (e.g. lighting or reading angle).
User entry	20 to 80 %
Factory setting	Dependent on the display.
Additional information	🛈 Setting the contrast via push-buttons: • Darker: press the Ⓞ Ⓔ buttons simultaneously. • Brighter: press the Ⓞ Ⓔ buttons simultaneously.

"Configuration backup display" submenu

ℹ️ This submenu is only visible if a display module is connected to the device.

The configuration of the device can be saved to the display module at a certain point of time (backup). The saved configurateion can be restored to the device if required, e.g. in order to bring the device back into a defined state. The configuration can also be transferred to a different device of the same type using the display module.

Navigation   ▣▣   Setup → Advanced setup → Configuration backup display

---

Operating time

Navigation	▣▣ Setup → Advanced setup → Configuration backup display → Operating time
Description	Indicates how long the device has been in operation.
Additional information	*Maximum time* 9 999 d (≈ 27 years)

Last backup

Navigation	▣▣ Setup → Advanced setup → Configuration backup display → Last backup
Description	Indicates when the last data backup was saved to the display module.
Configuration management   🔒

Navigation	▣▣ Setup → Advanced setup → Configuration backup display → Configuration management
Description	Select action for managing the device data in the display module.
Selection	• Cancel • Execute backup • Restore • Duplicate • Compare • Clear backup data
Factory setting	Cancel
Additional information	Meaning of the options

Meaning of the options

• **Cancel**
No action is executed and the user exits the parameter.

• **Execute backup**
A backup copy of the current device configuration in the HistoROM (built-in in the device) is saved to the display module of the device.

• **Restore**
The last backup copy of the device configuration is copied from the display module to the HistoROM of the device.

• **Duplicate**
The transmitter configuration is duplicated to another device using the transmitter display module. The following parameters, which characterize the individual measuring point are **not** included in the transmitted configuration:
Medium type

• **Compare**
The device configuration saved in the display module is compared to the current device configuration of the HistoROM. The result of this comparison is displayed in the **Comparison result** parameter (→ 🖺 154).

• **Clear backup data**
The backup copy of the device configuration is deleted from the display module of the device.

🛈 While this action is in progress, the configuration cannot be edited via the local display and a message on the processing status appears on the display.

🛈 If an existing backup is restored to a different device using the **Restore** option, it may occur that some device functionalities are no longer available. In some cases even a device reset will not restore the original status.

In order to transmit a configuration to a different device, the **Duplicate** option should always be used.

Backup state
Navigation   🖩   Setup → Advanced setup → Configuration backup display → Backup state

Description   Displays which backup action is currently in progress.

Comparison result

Navigation   🖩🖩   Setup → Advanced setup → Configuration backup display → Comparison result

Description   Comparison between present device data and display backup.

Additional information   **Meaning of the display options**
• **Settings identical**
The current device configuration of the HistoROM is identical to the backup copy in the display module.
• **Settings not identical**
The current device configuration of the HistoROM is not identical to the backup copy in the display module.
• **No backup available**
There is no backup copy of the device configuration of the HistoROM in the display module.
• **Backup settings corrupt**
The current device configuration of the HistoROM is corrupt or not compatible with the backup copy in the display module.
• **Check not done**
The device configuration of the HistoROM has not yet been compared to the backup copy in the display module.
• **Dataset incompatible**
The data sets are incompatible and can not be compared.

To start the comparison, set **Configuration management** (→ 🖺 153) = **Compare**.

If the transmitter configuration has been duplicated from a different device by **Configuration management** (→ 🖺 153) = **Duplicate**, the new device configuration in the HistoROM is only partially identical to the configuration stored in the display module: Sensor specific properties (e.g. the mapping curve) are not duplicated. Thus, the result of the comparison will be **Settings not identical**.

"Administration" submenu

Navigation   ⊟   Setup → Advanced setup → Administration

Define access code   🔒

Navigation	⊟	Setup → Advanced setup → Administration → Define access code
Description		Define release code for write access to parameters.
User entry		0 to 9 999
Factory setting		0

Additional information

ℹ️ If the factory setting is not changed or 0 is defined as the access code, the parameters are not write-protected and the configuration data of the device can then always be modified. The user is logged on in the *Maintenance* role.

ℹ️ The write protection affects all parameters marked with the 🔒 symbol in this document. On the local display, the 🔒 symbol in front of a parameter indicates that the parameter is write-protected.

ℹ️ Once the access code has been defined, write-protected parameters can only be modified if the access code is entered in the **Enter access code** parameter (→ 🖺 121).

ℹ️ Please contact your Endress+Hauser Sales Center if you lose your access code.

ℹ️ For display operation: The new access code is only valid after it has been confirmed in the **Confirm access code** parameter (→ 🖺 158).

Device reset   🔒

Navigation	🖺⊟	Setup → Advanced setup → Administration → Device reset
Description		Reset the device configuration - either entirely or in part - to a defined state.

Selection
- Cancel
- To factory defaults
- To delivery settings
- Of customer settings
- To transducer defaults
- Restart device

Factory setting   Cancel

Additional information   Meaning of the options
                                • Cancel
                                  No action
                                • To factory defaults
                                  All parameters are reset to the order-code specific factory setting.
                                • To delivery settings
                                  All parameters are reset to the delivery setting. The delivery setting may differ from the
                                  factory default if customer specific settings have been ordered.
                                  This option is only visible if customer specific settings have been ordered.
                                • Of customer settings
                                  All customer parameters are reset to their factory setting. Service parameters, however,
                                  remain unchanged.
                                • To transducer defaults
                                  Every measurment-related parameter is reset to its factory setting. Service parameters
                                  and communication-related parameters, however, remain unchanged.
                                • Restart device
                                  The restart resets every parameter which is stored in the volatile memory (RAM) to the
                                  factory setting (e.g. measured value data). The device configuration remains unchanged.

"Define access code" wizard

ℹ The **Define access code** wizard is only available when operating via the local display. When operating via an operating tool, the **Define access code** parameter is located directly in the **Administration** submenu. The **Confirm access code** parameter is not available for operation via operating tool.

Navigation   ⊠   Setup → Advanced setup → Administration → Define access code

---

Define access code	🔒

Navigation	⊠	Setup → Advanced setup → Administration → Define access code → Define access code

Description   → 🖺 156

Confirm access code	🔒

Navigation	⊠	Setup → Advanced setup → Administration → Define access code → Confirm access code

Description   Confirm the entered access code.

User entry   0 to 9999

Factory setting   0

16.4   "Diagnostics" menu

Navigation   ⊞⊟   Diagnostics

Actual diagnostics

Navigation	⊞⊟ Diagnostics → Actual diagnostics
Description	Displays current diagnostic message.
Additional information	The display consists of:

- Symbol for event behavior
- Code for diagnostic behavior
- Operating time of occurrence
- Event text

ℹ️ If several messages are active at the same time, the messages with the highest priority is displayed.

ℹ️ Information on what is causing the message, and remedy measures, can be viewed via the ⓘ symbol on the display.

Timestamp

Navigation	⊟ Diagnostics → Timestamp
Previous diagnostics

Navigation	⊞⊟ Diagnostics → Previous diagnostics
Description	Displays the last diagnostic message which has been active before the current message.
Additional information	The display consists of:

- Symbol for event behavior
- Code for diagnostic behavior
- Operating time of occurrence
- Event text

ℹ️ The condition displayed may still apply. Information on what is causing the message, and remedy measures, can be viewed via the ⓘ symbol on the display.

Timestamp		
Navigation	▣	Diagnostics → Timestamp

Operating time from restart		
Navigation	▣▣	Diagnostics → Operating time from restart
Description		Displays the time the device has been in operation since the last device restart.

Operating time		
Navigation	▣▣	Diagnostics → Operating time
Description		Indicates how long the device has been in operation.
Additional information		*Maximum time* 9 999 d (≈ 27 years)

16.4.1   "Diagnostic list" submenu

Navigation   🔘🖫   Diagnostics → Diagnostic list

Diagnostics 1 to 5

Navigation	🔘🖫 Diagnostics → Diagnostic list → Diagnostics 1
Description	Display the current diagnostics messages with the highest to fifth-highest priority.
Additional information	The display consists of: • Symbol for event behavior • Code for diagnostic behavior • Operating time of occurrence • Event text

---

Timestamp 1 to 5

Navigation	🖫 Diagnostics → Diagnostic list → Timestamp

16.4.2   "Event logbook" submenu

The **Event logbook** submenu is only available when operating via the local display. When operating via FieldCare, the event list can be displayed in the FieldCare function "Event List / HistoROM".

Navigation   Diagnostics → Event logbook

Filter options	

Navigation	Diagnostics → Event logbook → Filter options
Selection	▪ All ▪ Failure (F) ▪ Function check (C) ▪ Out of specification (S) ▪ Maintenance required (M) ▪ Information (I)
Factory setting	All
Additional information	▪ This parameter is only used for operation via the local display. ▪ The status signals are categorized according to NAMUR NE 107.

"Event list" submenu

The **Event list** submenu displays the history of past events of the category selected in the **Filter options** parameter (→ 🖿 162). A maximum of 100 events are displayed in chronological order.

The following symbols indicate whether an event has occurred or has ended:
▪ ⊕: Event has occurred
▪ ⊖: Event has ended

Information on what is causing the message, and remedy instructions, can be viewed via the ⓘ-button.

Display format
▪ For event messages in category I: information event, event text, "recording event" symbol and time the event occurred
▪ For event messages in category F, M, C, S (status signal): diagnostics event, event text, "recording event" symbol and time the event occurred

Navigation   Diagnostics → Event logbook → Event list

16.4.3   "Device information" submenu

Navigation   ⧉⧉   Diagnostics → Device information

Device tag

Navigation	⧉⧉ Diagnostics → Device information → Device tag
Description	Enter the name for the measuring point.
Factory setting	FMR5x

Serial number

Navigation	⧉⧉ Diagnostics → Device information → Serial number
Description	Shows the serial number of the measuring device.
Additional information	**Uses of the serial number** • To identify the device quickly, e.g. when contacting Endress+Hauser. • To obtain specific information on the device using the Device Viewer: www.endress.com/deviceviewer The serial number is also indicated on the nameplate.

Firmware version

Navigation	⧉⧉ Diagnostics → Device information → Firmware version
Description	Shows the device firmware version installed.
User interface	xx.yy.zz
Additional information	For firmware versions differing only in the last two digits ("zz") there is no difference concerning functionality or operation.

Device name

Navigation	⧉⧉ Diagnostics → Device information → Device name
Description	Shows the name of the transmitter.

Order code   🔒

Navigation   ◎⊟   Diagnostics → Device information → Order code

Description   Shows the device order code.

Additional information   The order code is generated from the extended roder code, which defines all device
                              features of the product structure. In contrast, the device features can not be read directly
                              from the order code.

Extended order code 1 to 3   🔒

Navigation   ◎⊟   Diagnostics → Device information → Extended order code 1

Description   Display the three parts of the extended order code.

Additional information   The extended order code indicates the version of all the features of the product structure
                              and thus uniquely identifies the device.

Status PROFIBUS Master Config

Navigation   ◎⊟   Diagnostics → Device information → Status PROFIBUS Master Config

Description   Indicates whether the cyclic data exchange with the master is currently active.

User interface   • Active
                              • Not active

PROFIBUS ident number

Navigation   ◎⊟   Diagnostics → Device information → PROFIBUS ident number

Description   Indicates the ident number of the device.

Additional information   The **Ident number selector** parameter can be used to define which ident number is used.

16.4.4 "Measured values" submenu

Navigation   Diagnostics → Measured values

Distance	

Navigation	Diagnostics → Measured values → Distance
Description	Displays the measured distance D between the reference point (lower edge of the flange or threaded connection) and the level.
Additional information

47   Distance for bulk solid measurements

The unit is defined in the **Distance unit** parameter (→ 🗏 108).

Level linearized	

Navigation	Diagnostics → Measured values → Level linearized
Description	Displays linearized level.
Additional information	The unit is defined by the **Unit after linearization** parameter → 🗏 130.

Terminal voltage 1

Navigation   ⊚⊟   Diagnostics → Measured values → Terminal voltage 1

Switch status

Navigation   ⊚⊟   Diagnostics → Measured values → Switch status

Description   Shows the current switch output status.

Electronic temperature

Navigation   ⊚⊟   Diagnostics → Measured values → Electronic temperature

Description   Displays the current temperature of the electronics.

Additional information   The unit is defined in the **Temperature unit** parameter.

16.4.5 "Analog input 1 to 6" submenu

There is an **Analog input** submenu for each Analog Input Block of the device. Only the most important parameters of the respective block are available at this position of the operating menu. For a complete list of the block parameters refer to: Diagnostics → Analog inputs → Analog input 1 to 6

Navigation   Diagnostics → Analog inputs → Analog input 1 to 6

Channel

Navigation	Diagnostics → Analog inputs → Analog input 1 to 6 → Channel

Description   Standard parameter **CHANNEL** of the Analog Input Block according to the PROFIBUS Profile.

Selection   • Level linearized
• Distance
• Terminal voltage
• Electronic temperature
• Absolute echo amplitude
• Relative echo amplitude
• Sensor debug
• Analog output adv. diagnostics 1
• Analog output adv. diagnostics 2

Factory setting   Level linearized

Additional information   Allocates a measured value to the AI block.

Out value

Navigation	Diagnostics → Analog inputs → Analog input 1 to 6 → Out value

Description   Element **Value** of the standard parameter **OUT** in the Analog Input Block according to the PROFIBUS Profile.

User entry   Signed floating-point number

Factory setting   0

Additional information   • For **Mode block actual** = **Man**:
  Enter the output value of the Analog Input Block.
• Else:
  Displays the output value of the Analog Input Block.

Out status

Navigation	🖮🗔 Diagnostics → Analog inputs → Analog input 1 to 6 → Out status
Description	Element **Status** of the standard parameter **OUT** in the Analog Input Block accordintg to the PROFIBUS Profile.
User interface	• Good • Uncertain • Bad
Additional information	Only the two quality bits are evaluated in this parameter.

Out status HEX

Navigation	🖮🗔 Diagnostics → Analog inputs → Analog input 1 to 6 → Out status HEX
Description	Element **Status** of the standard parameter **OUT** in the Analog Input Block according to the PROFIBUS Profile.
User entry	0 to 255
Factory setting	128
Additional information	The complete status byte is displayed in the form of a two-digit hexadecimal number in this parameter.

16.4.6 "Data logging" submenu

Navigation   🔲🔲 Diagnostics → Data logging

Assign channel 1 to 4	🔒

Navigation	🔲🔲 Diagnostics → Data logging → Assign channel 1 to 4

Selection	• Off • Level linearized • Distance • Terminal voltage • Electronic temperature • Absolute echo amplitude • Relative echo amplitude • Area of incoupling • Analog output adv. diagnostics 1 • Analog output adv. diagnostics 2
Factory setting	Off
Additional information	A total of 1000 measured values can be logged. This means: • 1000 data points if 1 logging channel is used • 500 data points if 2 logging channels are used • 333 data points if 3 logging channels are used • 250 data points if 4 logging channels are used If the maximum number of data points is reached, the oldest data points in the data log are cyclically overwritten in such a way that the last 1000, 500, 333 or 250 measured values are always in the log (ring memory principle). 🛈 The logged data are deleted if a new option is selected in this parameter.

Logging interval	🔒

Navigation	🔲🔲 Diagnostics → Data logging → Logging interval
User entry	1.0 to 3 600.0 s
Factory setting	30.0 s
Additional information	This parameter defines the interval between the individual data points in the data log, and thus the maximum loggable process time T_{log}: • If 1 logging channel is used: $T_{log} = 1000 \cdot t_{log}$ • If 2 logging channels are used: $T_{log} = 500 \cdot t_{log}$ • If 3 logging channels are used: $T_{log} = 333 \cdot t_{log}$ • If 4 logging channels are used: $T_{log} = 250 \cdot t_{log}$

Once this time elapses, the oldest data points in the data log are cyclically overwritten such that a time of T $_{log}$ always remains in the memory (ring memory principle).

The logged data are deleted if this parameter is changed.

Example

When using 1 logging channel
- T$_{log}$ = 1000 · 1 s = 1 000 s ≈ 16.5 min
- T$_{log}$ = 1000 · 10 s = 1 000 s ≈ 2.75 h
- T$_{log}$ = 1000 · 80 s = 80 000 s ≈ 22 h
- T$_{log}$ = 1000 · 3 600 s = 3 600 000 s ≈ 41 d

Clear logging data

Navigation   Diagnostics → Data logging → Clear logging data

Selection   • Cancel
                        • Clear data

Factory setting   Cancel

"Display channel 1 to 4" submenu

The **Display channel 1 to 4** submenus are only available for operation via the local display. When operating via FieldCare, the logging diagram can be displayed in the FieldCare function "Event List / HistoROM" .

The **Display channel 1 to 4** submenus invoke a diagram of the logging history of the respective channel.
- x-axis: depending on the number of selected channels, 250 to 1000 measured values of a process variable are displayed.
- y-axis: covers the approximate measured value span and constantly adapts this to the measurement.
To return to the operating menu, press ⊞ and ⊟ simultaneaously.

Navigation   ▣▢   Diagnostics → Data logging → Display channel 1 to 4

16.4.7 "Simulation" submenu

The **Simulation** submenu is used to simulate specific measuring values or other conditions. This helps to check the correct configuration of the device and connected control units.

Conditions which can be simulated

Condition to be simulated	Associated parameters
Specific value of a process variable	• Assign measurement variable (→ 🖺 174) • Value process variable (→ 🖺 174)
Specific state of the switch output	• Switch output simulation (→ 🖺 174) • Switch status (→ 🖺 175)
Existence of an alarm	Simulation device alarm (→ 🖺 175)

Structure of the submenu

Navigation   Expert → Diagnostics → Simulation

‣ Simulation		
Assign measurement variable	→ 🗎 174	
Value process variable	→ 🗎 174	
Switch output simulation	→ 🗎 174	
Switch status	→ 🗎 175	
Simulation device alarm	→ 🗎 175	

Description of parameters

Navigation   ⊞⊟   Expert → Diagnostics → Simulation

Assign measurement variable	🔒

Navigation	⊞⊟ Expert → Diagnostics → Simulation → Assign measurement variable

Selection	• Off • Level • Level linearized

Factory setting	Off

Additional information	• The value of the variable to be simulated is defined in the **Value process variable** parameter (→ 🔲 174). • If **Assign measurement variable** ≠ **Off**, a simulation is active. This is indicated by a diagnotic message of the *Function check (C)* category.

Value process variable	🔒

Navigation	⊞⊟ Expert → Diagnostics → Simulation → Value process variable

Prerequisite	**Assign measurement variable (→ 🔲 174) ≠ Off**

User entry	Signed floating-point number

Factory setting	0

Additional information	Downstream measured value processing and the signal output use this simulation value. In this way, users can verify whether the measuring device has been configured correctly.

Switch output simulation	🔒

Navigation	⊞⊟ Expert → Diagnostics → Simulation → Switch output simulation

Description	Switch the simulation of the switch output on and off.

Selection	• Off • On

Factory setting	Off

Switch status   ⚙

Navigation	⚙🖳 Expert → Diagnostics → Simulation → Switch status
Prerequisite	Switch output simulation (→ 🖺 174) = On
Description	Select the status of the status output for the simulation.
Selection	• Open • Closed
Factory setting	Open
Additional information	The switch status assumes the value defined in this parameter. This helps to check correct operation of connected control units.

Simulation device alarm   ⚙

Navigation	⚙🖳 Expert → Diagnostics → Simulation → Simulation device alarm
Description	Switch the device alarm on and off.
Selection	• Off • On
Factory setting	Off
Additional information	When selecting the **On** option, the device generates an alarm. This helps to check the correct output behavior of the device in the case of an alarm. An active simulation is indicated by the diagnostic message ⊗C484 **Simulation failure mode**.

Simulation diagnostic event

Navigation	⚙🖳 Expert → Diagnostics → Simulation → Simulation diagnostic event
Description	Select a diagnostic event for the simulation process that is activated.
Factory setting	Off
Additional information	When operated via the local display, the selection list can be filtered according to the event categories (**Diagnostic event category** parameter).

16.4.8 "Device check" submenu

Navigation   ⓑ⬚   Diagnostics → Device check

Start device check   ⓐ

Navigation	ⓑ⬚ Diagnostics → Device check → Start device check
Description	Start a device check.
Selection	• No • Yes
Factory setting	No
Additional information	In the case of a lost echo a device check can not be performed.

Result device check

Navigation	ⓑ⬚ Diagnostics → Device check → Result device check
Description	Displays the result of the device check.

Additional information   **Meaning of the display options**
• **Installation ok**
  Measurement possible without restrictions.
• **Accuracy reduced**
  A measurement is possible. However, the measuring accuracy may be reduced due to the signal amplitudes.
• **Measurement capability reduced**
  A measurement is currently possible. Howerver, there is the risk of an echo loss. Check the mounting position of the device and the dielectric constant of the medium.
• **Check not done**
  No device check has been performed.

Last check time

Navigation	ⓑ⬚ Diagnostics → Device check → Last check time
Description	Displays the operating time at which the last device check has been performed.

Level signal	

Navigation	⊞⊟ Diagnostics → Device check → Level signal
Prerequisite	Device check has been performed.
Description	Displays result of the device check for the level signal.
User interface	• Check not done • Check not OK • Check OK
Additional information	For **Level signal** = **Check not OK**: Check the mounting position of the device and the dielectric constant of the medium.

16.4.9 "Heartbeat" submenu

The **Heartbeat** submenu is only available via **FieldCare** or **DeviceCare**. It contains the wizards which are part of the **Heartbeat Verification** and **Heartbeat Monitoring** application packages.

Detailed description
SD01871F

Navigation　　⊞⊟　Diagnostics → Heartbeat
