

## Technical Information

# Liquiphant FailSafe FTL80, FTL81, FTL85

Vibronic

Point level switch for liquids

### Application

The Liquiphant FailSafe is a point level switch for minimum and maximum detection (MIN/MAX) which can be used in liquids:

- Process temperatures –60 to 280 °C (–76 to 536 °F)
- Ambient temperatures –60 to 70 °C (–76 to 158 °F)
- For highly corrosive media
- Pressures up to 100 bar (1450 psi)
- Viscosity up to 10000 mPa·s
- Density from 0.4 g/cm<sup>3</sup> (0.4 SGU)

Liquiphant FailSafe is the reliable point level switch for MIN and MAX safety applications up to SIL3.

Outstanding features of the point level switch are its fail-safe design and its high availability.

A permanent LIVE signal also monitors function safety.

### Your benefits

- 4-20 mA interface (acc. to NAMUR NE 06/NE 43): easy integration via the switching unit (Nivotester FailSafe FTL825) with a two-channel output (safety contacts) and locking function or direct integration into a safety PLC
- Use in safety systems requiring functional safety to SIL3 in accordance with IEC 61508 Ed.2.0/ IEC 61511-1/ISA 84-1 and DIN EN ISO 13849
- Proof test: proof testing interval up to 12 years
- Slave devices tested at the press of a button
- Permanent self-monitoring/internal redundancy
- No adjustment: quick, low-cost startup
- No mechanically moving parts: no maintenance, no wear, long operating life
- Monitoring of fork for damage, corrosion, buildup and mechanical blocking
- 2. process seal (2<sup>nd</sup> line of defense) is provided as standard in the high-temperature version or can be optionally selected for all other versions

## Function and system design

### Point level detection

Maximum or minimum detection for liquids in tanks or pipes (leak monitoring, dry running protection/pump protection or overfill protection), particularly for the chemical, energy and oil & gas industry. Special versions are suitable for use in hazardous areas and for applications with high pressures. As a coated version, the Liquiphant FailSafe is highly resistant to corrosion, making it particularly suitable for very aggressive liquids.

The point level switches make a distinction between two states: "covered" and "exposed". Depending on whether you have selected the MIN (minimum detection) or MAX (maximum detection) operating mode, this results in two specific scenarios in each case: the "Good" state and demand mode.

"Good" state:

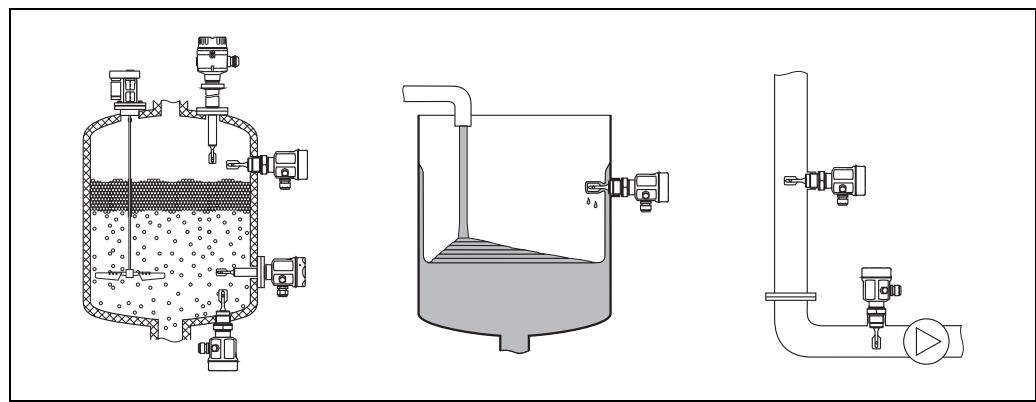

The fork is covered in the MIN operating mode (e.g. pump protection).

The fork is exposed (uncovered) in the MAX operating mode (e.g. overfill protection).

Demand mode:

The fork is exposed (uncovered) in the MIN operating mode (e.g. pump protection).

The fork is covered in the MAX operating mode (e.g. overfill protection).

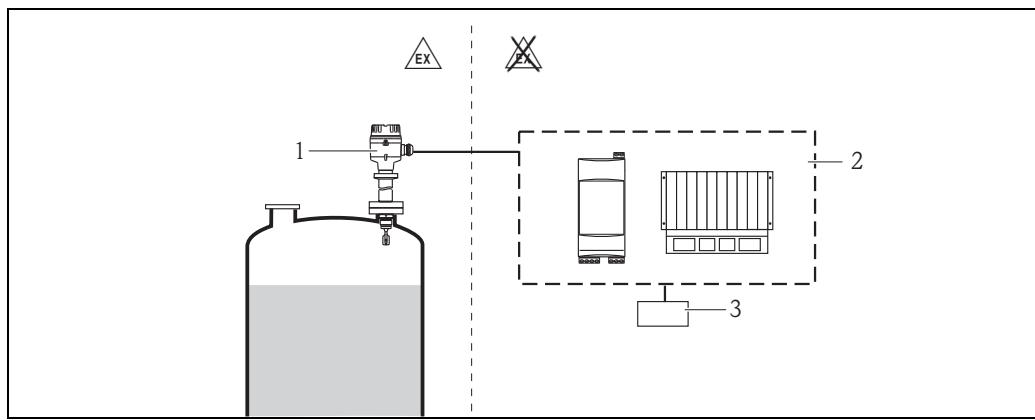

A0018061

### Measuring principle

The sensor's fork vibrates at its intrinsic frequency. When the tuning fork is immersed in a liquid, its intrinsic frequency changes due to the change in density of the surrounding medium. This change in frequency causes the current signal to switch.

### Design

- FTL80: Compact
- FTL81: With pipe extension
- FTL85: With coated pipe extension (only flanged version)

**Measuring system**

- 1 Liquiphant FailSafe FTL8x with electronic insert FEL85 (4-20 mA)
- 2 Separate switching unit:
  - Nivotester FailSafe FTL825
  - PLC
  - Safety PLC
  - ...
- 3 Actuator

**Input**

<b>Measured variable</b>	Point level (level)
<b>Measuring range (detection range)</b>	The measuring range depends on the mounting point and the pipe extension, where applicable.
<b>Density</b>	Setting on the electronic insert: <ul style="list-style-type: none"> <li>■ MIN: <math>\geq 0.4</math> to <math>\leq 2,0 \text{ g/cm}^3</math> (<math>\geq 0.4</math> to <math>\leq 2,0 \text{ SGU}</math>)</li> <li>■ MAX: <math>\geq 0.4 \text{ g/cm}^3</math> (<math>\geq 0.4 \text{ SGU}</math>)</li> </ul>

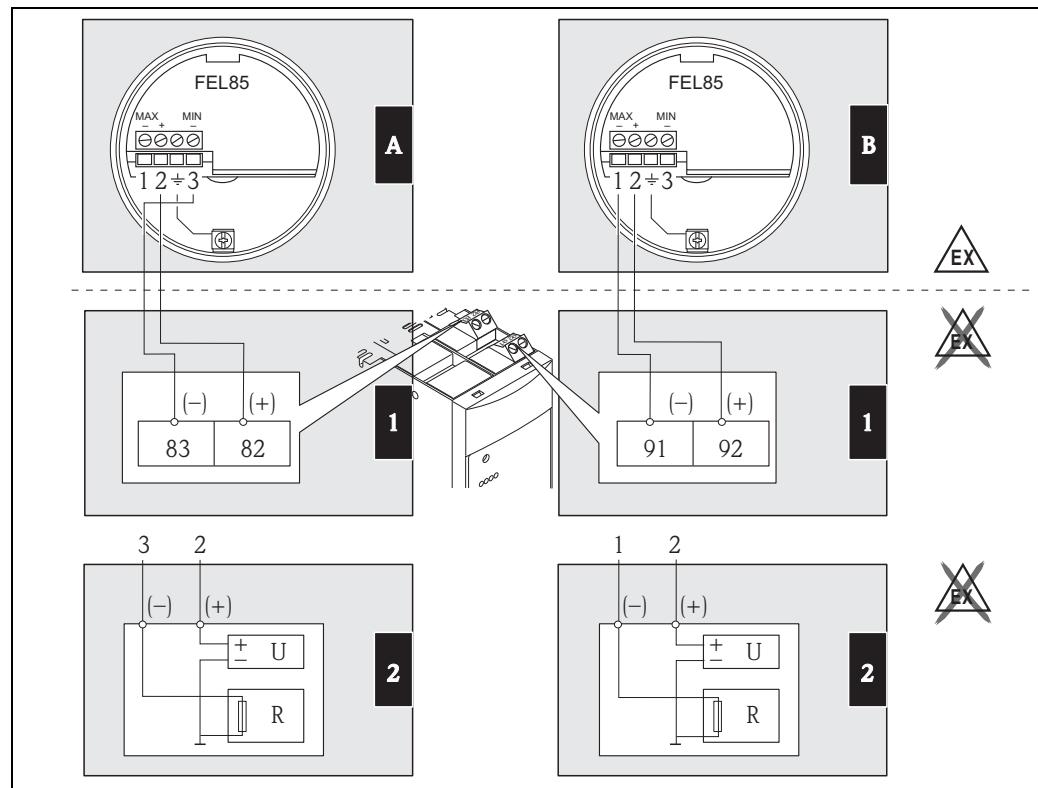

## Output: electronic insert FEL85 (4-20 mA)

**Power supply**

Nominal supply voltage: DC 24 V  
 Supply voltage range: DC 12 to 30 V  
 Power consumption: < 660 mW  
 Reverse polarity protection: yes

**Electrical connection**
**Two-wire connection**

For connecting to the Nivotester FailSafe FTL825, a programmable logic controller (PLC), a safety PLC (SPLC) or AI modules 4-20 mA as per EN 61131-2.  
 Output signal jump from high to low current when the point level is reached.

**Minimum detection (MIN)****Maximum detection (MAX)**

A+1: FEL85 with Nivotester FailSafe FTL825  
 A+2: FEL85 with a PLC or safety PLC

B+1: FEL85 with Nivotester FailSafe FTL825  
 B+2: FEL85 with a PLC or safety PLC

A0018062

Output signal		Safety mode	Level	Output signal	LEDs
					green yellow
MAX					+ 13.5 mA 2  - 1
					+ 6.0 mA 2  - 1
MIN					+ 18.5 mA 2  - 3
					+ 9.0 mA 2  - 3

- \* A permanent LIVE signal (0.25 Hz frequency,  $\pm 0.5$  mA amplitude) is superimposed on the sensor output signal in the "Good" state ( $\neq$  demand mode)

## Status signals

The status signals (LEDs) make a distinction between the following states:

- Operation: normal state
  - Function check: end proof test\*
  - Outside specification: correct density setting\*
  - Maintenance required: clean sensor\*
  - Failure: replace electronic insert\*
  - Failure: check power supply
  - Failure: replace device\*

\* Output current: < 3.6 mA (error current as per NAMUR NE 43)

## Connectable load

$$R = (U - 12\text{ V}) / 22\text{ mA}$$

U = supply voltage range: DC 12 to 30 V

## Galvanic isolation

Between sensor and power supply

## System components

### Nivotester FailSafe FTL825

The Nivotester supplies direct current to the Liquiphant FailSafe FTL8x sensor via a two-wire cable. From here it receives a 4 to 20 mA current whose value is used to interpret the switching state. The intrinsically safe signal inputs of the Nivotester FTL825 point level switch are galvanically isolated from the mains and the output.

### *Mains voltage version*

- Nominal supply voltage: AC/DC 230/115 V
  - Supply voltage range: AC 85 to 253 V, 50/60 Hz  
DC 85 to 253 V
  - Power consumption:  $\leq 3.8$  VA,  $\leq 2.0$  W

### *Extra-low voltage version*

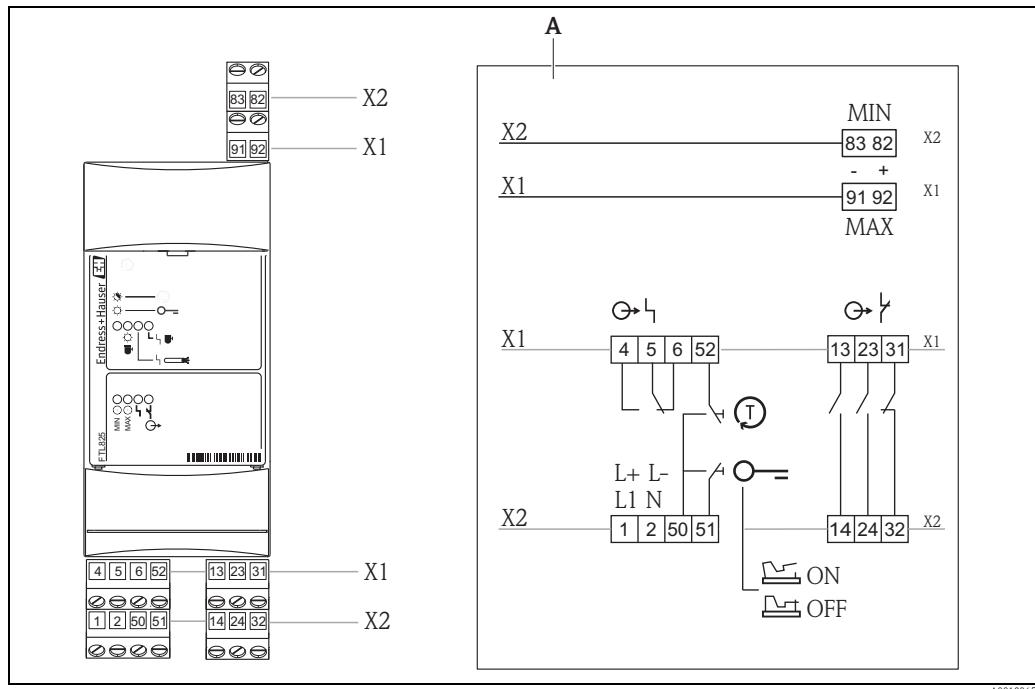

- Nominal supply voltage: AC/DC 24 V
  - Supply voltage range:  
AC 20 to 30 V, 50/60 Hz  
DC 20 to 60 V
  - D/C power supply: maximum 95 mA
  - Permitted residual ripple inside the tolerance:  $U_{ss} = \text{maximum } 2 \text{ V}$

Power consumption: <3.6 VA, <2.5 W

Reverse polarity protection: yes

Overvoltage protection FTL825: category II (2000 m (6562 ft) above MSL)

### Electrical connection

**A** Front flap (open)

A0018065

#### Terminal blocks

The removable terminal blocks are divided into intrinsically safe terminals (at the top of the device) and non-intrinsically safe terminals (at the bottom of the device). This distinction enables the safe routing of the connecting cable.

#### Connecting the sensor (top terminal blocks)

Only a Liquiphant FailSafe FTL8x sensor may be connected to the Nivotester FailSafe FTL825. MIN/MAX operating mode can be selected via connection wiring. A commercially available instrument cable can be used for the twin-core connecting cable between the two devices. Maximum 25 Ω cable resistance per core. Maximum 100 nF cable capacitance.

A shielded cable should be used if strong electromagnetic interference is expected (from machines or radio equipment). The shield is connected to the ground connection in the sensor. The use of shielded cables can improve EMC interference immunity.

#### Using the sensor in hazardous areas

Observe national explosion protection regulations surrounding the design and routing of intrinsically safe circuits.

Please refer to the associated safety instructions for information on the capacitance and inductance limit values. For more information on the documents, → 29.

#### Connecting the signal and control units (bottom terminal blocks)

Pay attention to the relay function depending on the level and fail-safe mode. If a high-inductance device is connected (e.g. contactor, solenoid valve etc.), a spark arrester must be provided to protect the relay contact.

#### Connecting the supply voltage (bottom terminal blocks)

As a fuse is incorporated in the power supply circuit it is not necessary to connect an upstream fine-wire fuse. The Nivotester has reverse polarity protection.

### Output signal

- Relay outputs:
  - Two floating NO contacts (supervised safety contacts based on the quiescent current principle) with an integrated 3.15 A fuse (exchangeable)  
Quiescent current operating mode: MIN/MAX (operating mode can be selected via connection wiring)
  - One floating NC contact (signaling contact)
  - Fault-signaling relay: floating changeover contact for error signaling
- Switching capacity per relay contact:  
 U ~ maximum 253 V  
 I ~ maximum 2 A  
 P ~ maximum 500 VA at  $\cos \varphi \geq 0.7$   
 U = maximum 40 V  
 I = maximum 2 A  
 P = maximum 80 W
- Operating life: at least  $10^5$  switching operations with maximum contact load
- Recommended minimum current: 1 mA
- Function indicators: light emitting diodes for operation, point level and error

### Signal on alarm

Safety contacts open, signaling contact closed, error signaled by red LED

### Installation

Vertically on DIN top-hat rail (mounting rail (TS 35) as per EN 50022)

### Dimensions

B/H/D: 45 mm (1.77 in), 108 mm (4.25 in), 112 mm (4.41 in)

### Technical Information

More information on the FTL825 is available on our product pages at [www.endress.com](http://www.endress.com) under Nivotester FailSafe FTL825, document number: TI01027F

## Connection and function

### Connecting cables

- Electronic insert: cross-section max.  $2.5 \text{ mm}^2$  (14 AWG)
- Maximum cable length: 1000 m ( 3281 ft)
- Maximum  $25 \Omega$  cable resistance per core
- Maximum 100 nF cable capacitance
- Protective ground in housing: cross-section max.  $2.5 \text{ mm}^2$  (14 AWG)
- External equipotential bonding connection on housing: cross-section max.  $4 \text{ mm}^2$  (12 AWG)

### Safety mode

Minimum/maximum detection (MIN/MAX) can be selected by connection coding on the electronic insert (→ 5, Electrical connection).

MAX = maximum detection:

The output switches in a safety-oriented manner when the probe is covered (demand mode).  
For use with overfill protection for example

MIN = minimum detection:

The output switches in a safety-oriented manner when the probe is uncovered (demand mode).  
For use with dry running protection, pump protection for example

### Switching time

- When fork is covered: approx.  $0.5 \text{ s} \pm 0.2 \text{ s}$
- When fork is exposed: approx.  $1.0 \text{ s} \pm 0.2 \text{ s}$
- Dwell time: at least 0.3 s

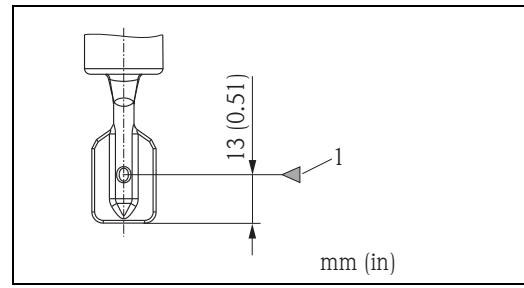

### Switch-on behavior

When switching on the power supply, the output assumes the alarm signal.  
Operational after max. 4 s

## Performance characteristics

### Reference operating conditions

Operating mode: MAX  
 Ambient temperature:  $23 \pm 5^\circ\text{C}$  ( $73 \pm 41^\circ\text{F}$ )  
 Process temperature:  $23^\circ\text{C}$  ( $73^\circ\text{F}$ )  
 Medium density:  $1 \text{ g/cm}^3$  (water), 1 SGU (water)  
 Viscosity:  $1 \text{ mPa}\cdot\text{s}$   
 Process pressure: 1 bar abs. (15 psi)  
 Sensor mounting: vertical from above  
 Low density switch to  $0.7 \text{ g/cm}^3$  (0.7 SGU)  
 High density switch to  $>2.0 \text{ g/cm}^3$  (2.0 SGU)

1 Switch point at reference operating conditions

Note!

Outside the reference operating conditions, the switch point is in the range of the fork tine. (See also installation conditions → 10.)

### Maximum measured error

$\pm 1 \text{ mm} (\pm 0.04 \text{ in})$

### Non-repeatability

0.1 mm (0.004 in)

### Hysteresis

- FTL80, FTL81, FTL85 (ECTFE and PFA): approx. 2 mm (0.08 in)
- FTL85 (enamel): approx. 2.5 mm (0.1 in)

### Influence of process temperature on the switch point

	Process temperature ( $^\circ\text{C}$ )	Process temperature ( $^\circ\text{C}$ )	Influence on the switch point (mm)	Influence on the switch point (in)
FTL80, FTL81	-50 to +150	-58 to 300	+1.8 to -2.8	+0.07 to -0.11
FTL80, FTL81	-60 to +280	-76 to 540	+1.4 to -5.5	+0.06 to -0.22
FTL85 ECTFE	-50 to +120	-58 to 250	+1.4 to -2.8	+0.06 to -0.11
FTL85 PFA	-50 to +150	-58 to 300	+1.4 to -2.8	+0.06 to -0.11
FTL85 enamel	-50 to +150	-58 to 300	+0.6 to -1.5	+0.02 to -0.06

### Influence of medium density on the switch point

	Process density ( $\text{g/cm}^3$ )	Process density (SGU)	Influence on the switch point (mm)	Influence on the switch point (in)
FTL8x	0.5 to 1.5	0.5 to 1.5	+4.8 to -3.5	+0.19 to -0.14

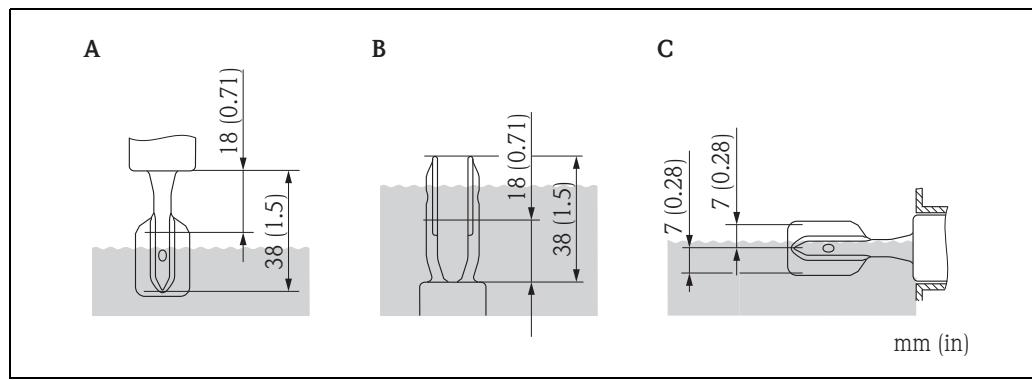

### Influence of process pressure on the switch point

	Process pressure (bar)	Process pressure (psi)	Influence on the switch point (mm)	Influence on the switch point (in)
FTL8x	-1 to 64	-14.5 to 928	0 to -2.5	0 to -0.1
FTL8x	-1 to 100	-14.5 to 1450	0 to -3.9	0 to -0.15

## Installation

### Mounting location

Switch points on the sensor depend on the mounting position (outside reference operating conditions).

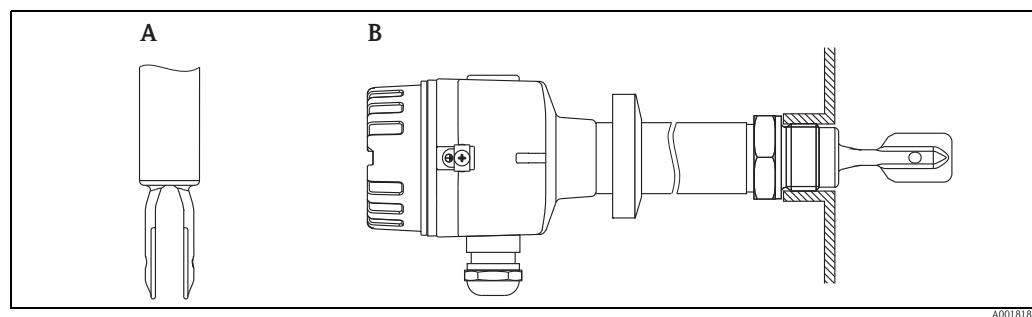

- A** *Mounting from above*
- B** *Mounting from below*
- C** *Mounting from the side*

### Examples of mounting

Examples of mounting with regard to the viscosity  $\nu$  of the liquid and the tendency to form buildup

#### Optimum mounting, trouble-free even with high viscosity

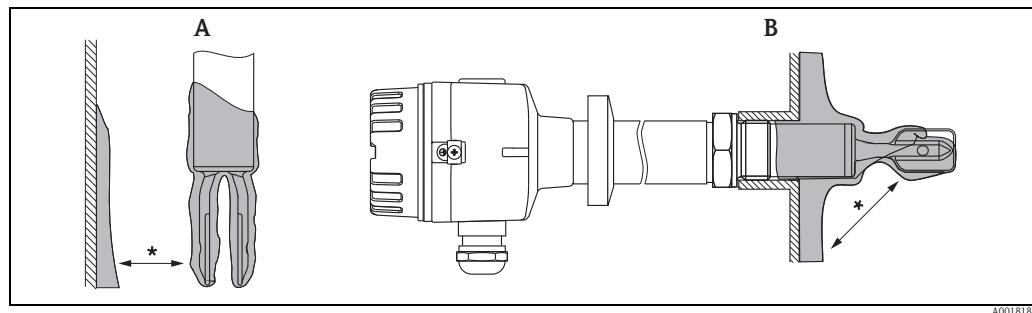

Position the fork so that the narrow edge of the tines is vertical to ensure that the liquid can run off easily.

- A** *Vertical from above*
- B** *Flush-mounted from the side*

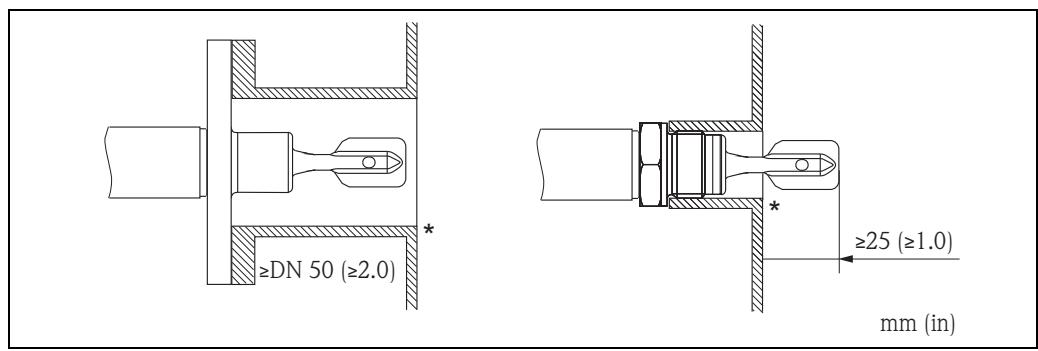

#### With buildup on the tank walls

\* Ensure that there is sufficient distance between the buildup expected on the tank wall and the fork.

- A** *Vertical from above*
- B** *Protruding into the tank from the side*

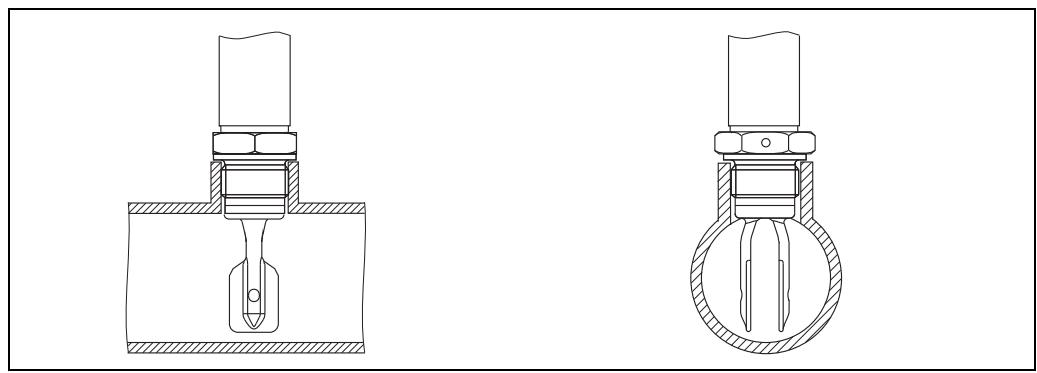

**Mounting positions with low viscosity up to 2000 mPa·s**

\* Deburr the socket surfaces

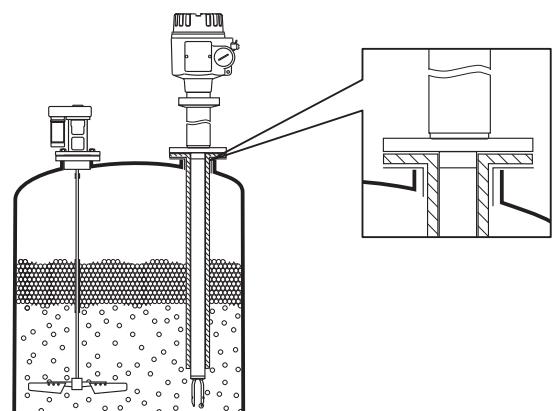

**Mounting in piping from 2"**

Flow velocities up to 5 m/s (16.4 ft/s) for viscosity 1 mPa·s and density 1 g/cm<sup>3</sup> (1 SGU). (Check the function for other process conditions.)

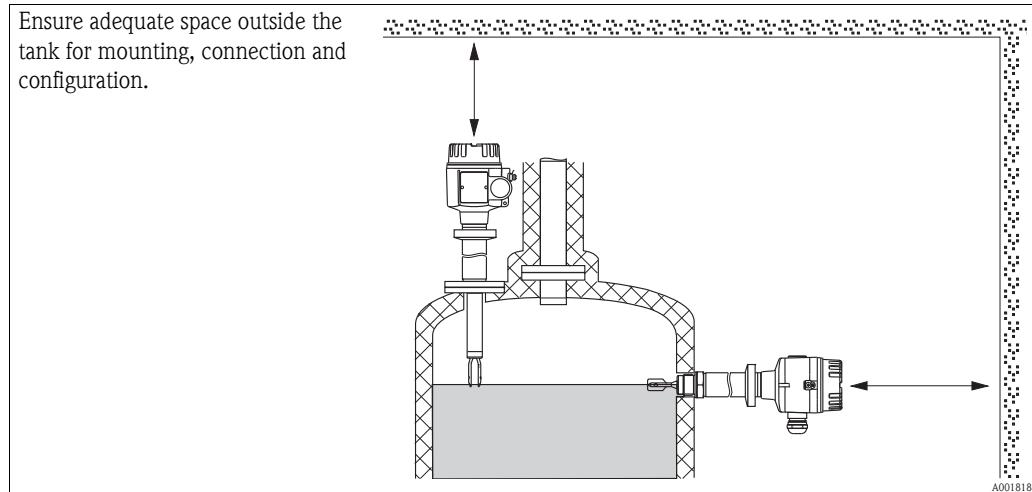

A0018187

Support the Liquiphant FailSafe FTL81  
and FTL85  
in the event of severe dynamic load.

A0018188

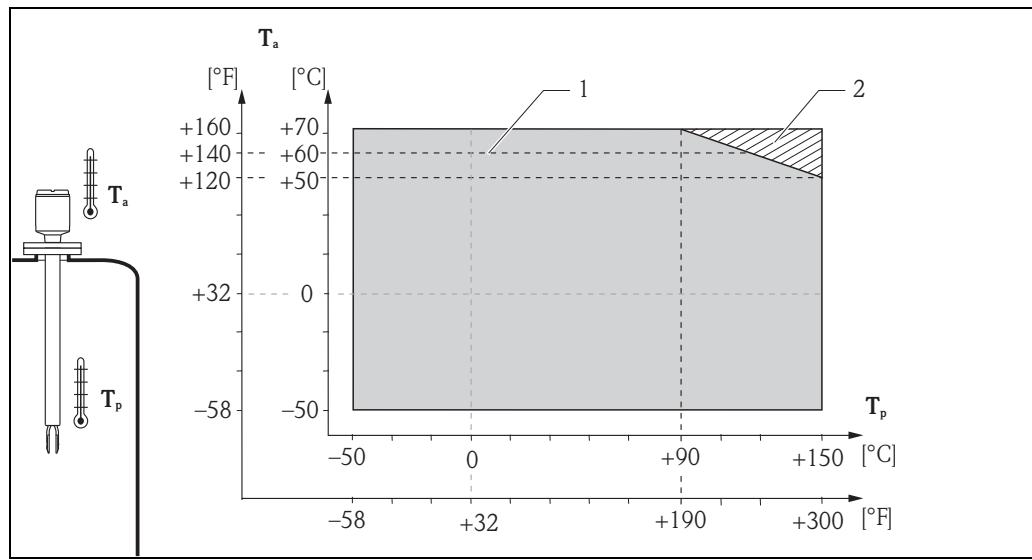

<b>Orientation depending on length</b>	<500 mm (<20 in): any orientation >500 mm (>20 in): vertical
--	---

## Environment

### Ambient temperature range Version with maximum process temperature of 150 °C (300 °F)

Permitted ambient temperature  $T_a$  at the housing depending on the process temperature  $T_p$  in the tank:

- $T_a = -40^\circ\text{C}$  ( $-40^\circ\text{F}$ ) standard
- $T_a = -50^\circ\text{C}$  ( $-58^\circ\text{F}$ ) optional

1 Maximum ambient temperature in hazardous areas ( $T_6$ ) and with intrinsically safe power

2 Additional temperature range for devices with a temperature spacer or pressure-tight feedthrough

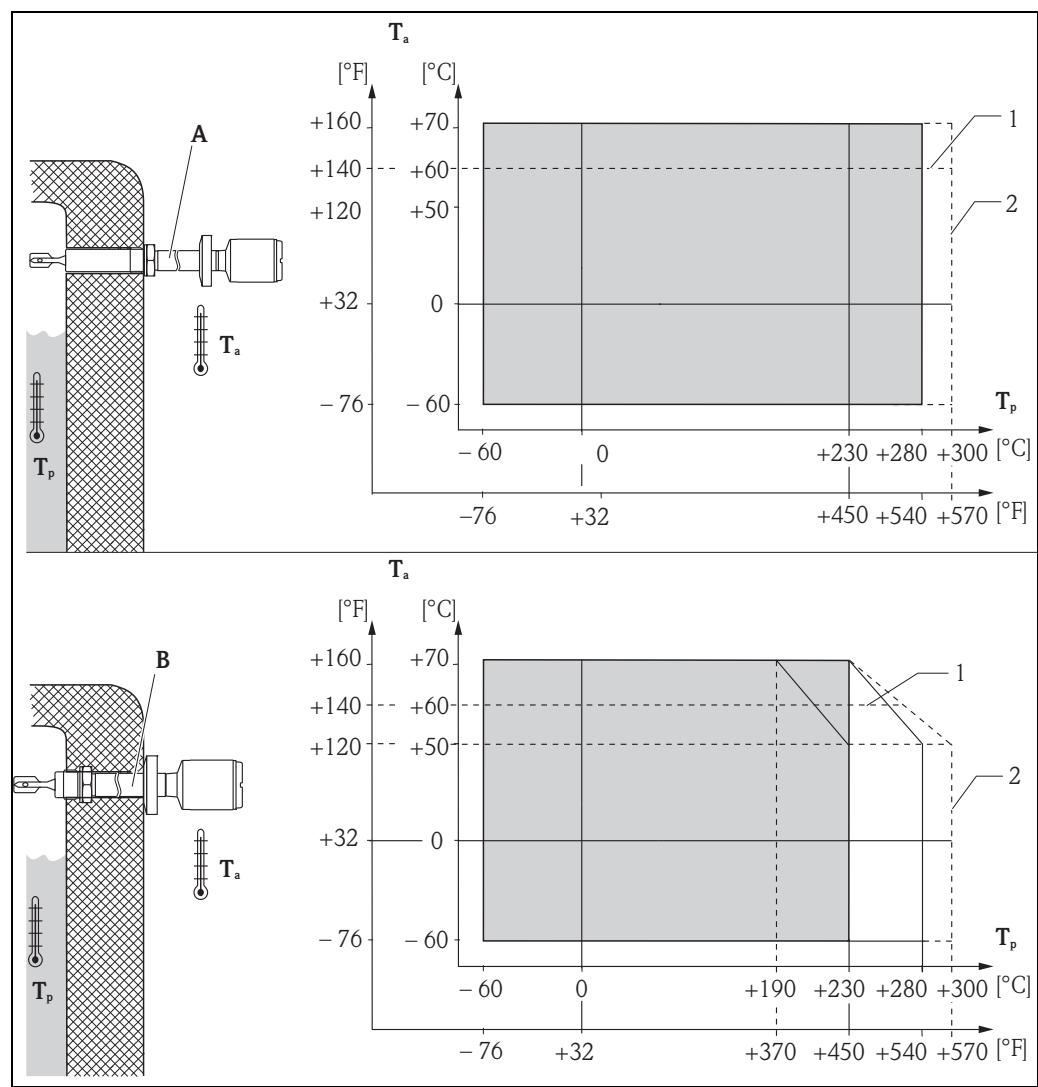

#### Note! FTL85

The temperature difference between the process temperature and ambient temperature ( $T_p - T_a$ ) of the flange may not exceed 60 °C (140 °F) for switches with ECTFE or PFA coating. The flange has to be included in the tank insulation where necessary.

**Version with maximum process temperature of 230/280 °C (450/540 °F)**

(only FTL80 and FTL81)

**A** Temperature spacer **outside** insulation**B** Temperature spacer **inside** insulation1 Maximum ambient temperature in hazardous areas (T<sub>6</sub>) and with intrinsically safe power

2 Maximum 50 cumulative hours

A0018191

**Ambient temperature limits**

-40 to +70 °C (-40 to +160 °F)

Optional: -50 to +70 °C (-58 to 160 °F) and -60 to +70 °C (-76 to 160 °F)

**Storage temperature**

-50 to +80 °C (-58 to 176 °F)

**Climate class**

Climate protection to IEC 60068, Part 2-38, Fig. 2a

**Degree of protection**

<b>Types of housing</b>	<b>IP66*</b>	<b>IP67*</b>	<b>IP68*</b>	<b>NEMA**</b>
Polyester housing F16	X	X	-	4X
Stainless steel housing F15	X	X	-	4X

Aluminum housing F13	X	-	X	4X/6P
Stainless steel housing F27	X	-	X	4X/6P
Aluminum housing T13 with separate connection compartment (Ex d)	X	-	X	4X/6P

\* As per EN60529; \*\* As per NEMA 250

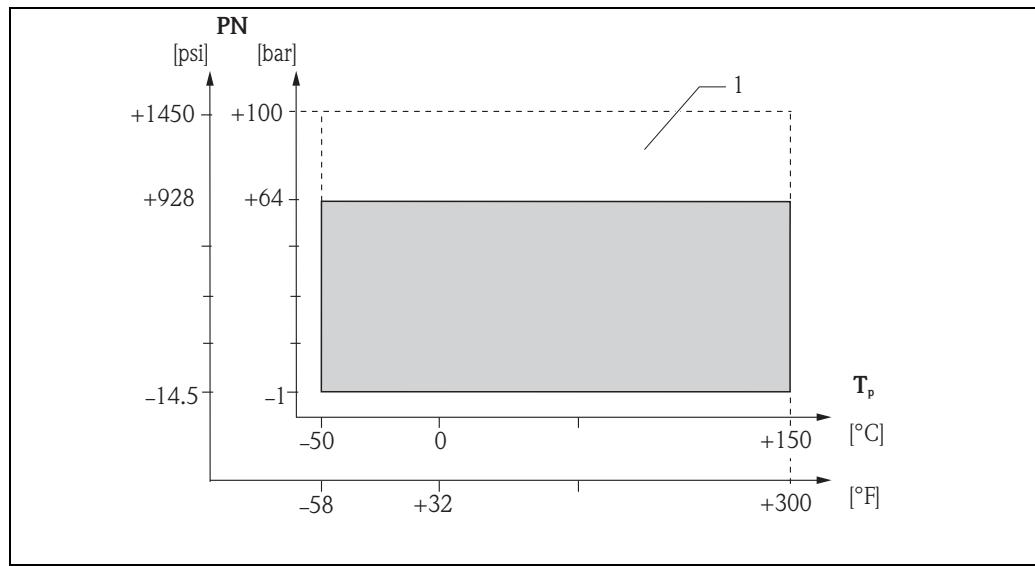

**Vibration resistance** As per IEC 60068-2-64, load class 1 ( $\text{m}/\text{s}^2$ )<sup>2</sup>/Hz, 3 x 100 minutes

**Electromagnetic compatibility** Electromagnetic compatibility in accordance with all of the relevant requirements in the EN 61326 series and NAMUR Recommendation NE 21 EMC. Please refer to the Declaration of Conformity for details.  
1 % span  $\leq 160 \mu\text{A}$

## Process

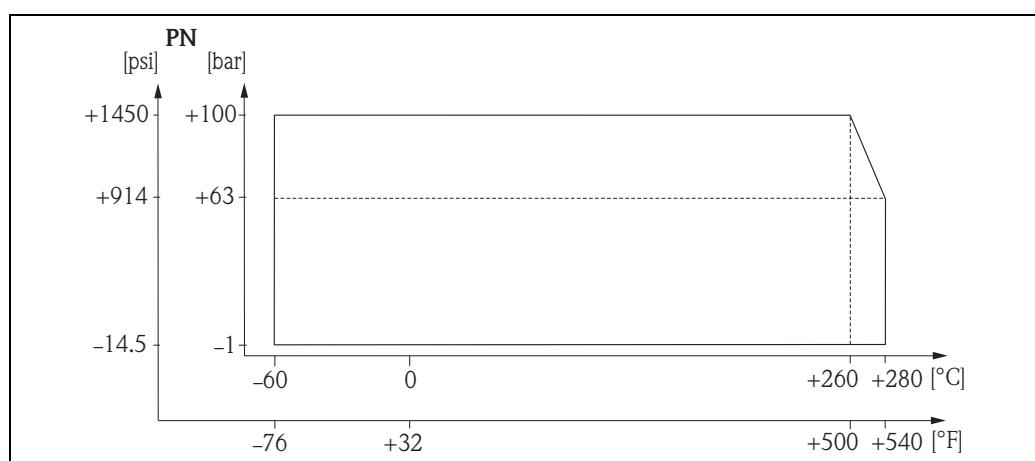

**Process pressure PN**

FTL80, FTL81:

*1 Allowed pressure rating when the "100 bar (1450 psi)" option is selected (FTL81)*

FTL80, FTL81 (230/280 °C (450/540 °F)):

*Only with high-temperature version*

<b>FTL85</b>		
ECTFE -1 to +40 bar (-14.5 to 580 psi)	PFA -1 to +40 bar (-14.5 to 580 psi)	Enamel -1 to +25 bar (-14.5 to 360 psi)

## Note!

Please refer to the standards listed for the permitted pressure values of the flanges at higher temperatures:

- pR EN 1092-1: 2005

With regard to their stability-temperature property, the materials 1.4435 and 1.4404 are identical and are grouped together under 13E0 in EN1092-1 Tab. 18. The chemical composition of the two materials can be identical.

- ASME B 16.5a - 2009 Tab. 2.2.3 F316L
- ASME B 16.5a - 2009 Tab. 2.3.8 N06022 and N06455
- JIS B 2220

The lowest value from the derating curves of the device and selected flange applies in each case.

**Test pressure**

**FTL80/81 ( $p_N = 64$  bar (960 psi)):** 100 bar (1450 psi) → 1.5 times the process pressure  $p_N$ ; no function during test pressure; burst pressure >200 bar (>2900 psi)

**FTL80/81 ( $p_N = 100$  bar (1450 psi)):** 150 bar (2250 psi) → 1.5 times the process pressure  $p_N$ ; no function during test pressure; burst pressure >400 bar (>5800 psi)

**FTL85 ( $p_N = 25$  or  $40$  bar (363 or 580 psi)):** 38 or 60 bar (550 or 870 psi)

→ 1.5 times the process pressure  $p_N$ ; no function during test pressure; burst pressure >400 bar (>5800 psi)

**Process temperature**

- FTL80, FTL81

-50 to +150 °C (-58 to +300 °F)

-60 to +280 °C (-76 to +540 °F) (high-temperature version: 300 °C (572 °F) for a maximum of 50 cumulative hours)

- FTL85

ECTFE: -50 to +120 °C (-58 to +248 °F)

PFA: -50 to +150 °C (-58 to +300 °F)

Enamel: -50 to +150 °C (-58 to +300 °F)

**Thermal shock**

Maximum 120 °C/s (300 °F/s) without restriction within the process temperature range

**Liquid gas application**

Process temperature: -50 to +60 °C (-58 to +140 °F)

**State of aggregation**

Liquid

**Density**

The density is set at two rotary switches ("Low" density and "High" density).

MAX	Medium	"Low" density in g/cm³ (SGU) $\rho_{LOW}$	"High" density in g/cm³ (SGU) $\rho_{HIGH}$
Combination 1	Liquefied gas	0.4 (0.4)	2.0 (2.0)
Combination 2	Other liquids	0.7 (0.7)	> 2.0 (> 2.0)

MIN	Medium	"Low" density in g/cm³ (SGU) $\rho_{LOW}$	"High" density in g/cm³ (SGU) $\rho_{HIGH}$
Combination 1	Liquefied gas	0.4 (0.4)	0.7 (0.7)
Combination 2	e.g. alcohol	0.6 (0.6)	0.9 (0.9)
Combination 3	e.g. water	0.7 (0.7)	1.2 (1.2)
Combination 4	e.g. acid	0.9 (0.9)	2.0 (2.0)

## Note!

Other density setting combinations are not permitted.

**Viscosity depending on the operating mode**

MAX:  $\leq 10000$  mPa·s

MIN:  $\leq 350$  mPa·s

MIN: coating, high temperature (230/280 °C (450/536 °F))  $\leq 100$  mPa·s

**Solids content**

Maximum ø5 mm (0.2 in)

**Lateral loading**

$\leq 75$  Nm (55.32 lbf ft)

## Mechanical construction

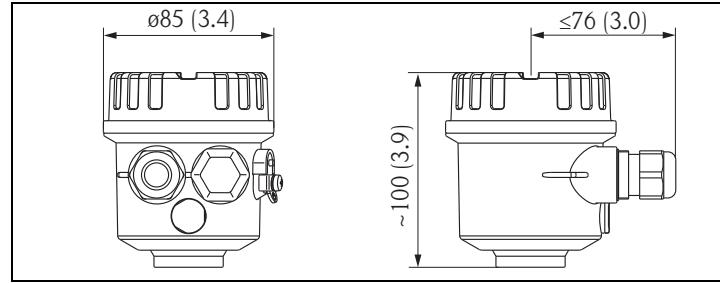

Note!  
All dimensions in mm (in)!

**Temperature spacers and pressure-tight feedthrough**

	Temperature spacer	Pressure-tight feedthrough (second line of defense)	Temperature spacer including welded gas-tight feedthrough
			
Maximum temperature	$\leq 150^{\circ}\text{C}$ ( $\leq 300^{\circ}\text{F}$ )	$< 230^{\circ}\text{C}$ (450 °F)	$< 280^{\circ}\text{C}$ (540 °F)
<b>Temperature spacer:</b> for bypassing any existing tank insulation. The additional distance to the process reduces the ambient temperature present at the housing.			
<b>Pressure-tight feedthrough:</b> sealed with an O-ring. Recommended if there is a risk of damage to the sensor particularly in the case of dangerous media or where there is medium to high probability of condensation forming.			
<b>Pressure-tight feedthrough:</b> welded diffusion-resistant glass feedthrough. Recommended if there is a risk of damage to the sensor particularly in the case of dangerous and very dangerous media or where there is a high probability of condensation forming.

**Material**

Material specifications as per AISI and DIN-EN.

**Parts in contact with process in FTL80, FTL81**

- Process connection and pipe extension: 316L (1.4435) optionally 2.4602 (AlloyC22)
- Tuning fork:
  - High-temperature version 318L (1.4462); optionally 2.4602 (AlloyC22)
  - Standard version 316L (1.4435); optionally 2.4602 (AlloyC22)
- Flanges: 316L (1.4435 or 1.4404)
- Flange plating: AlloyC22
  - High-temperature version carrier material 318L (1.4462)
  - Standard version carrier material 316L (1.4435 or 1.4404)
- Flat seal for process connection G ¾ or G 1: fiber-reinforced elastomer seal, asbestos-free

**Parts in contact with process in FTL85**

#### **Parts with no process contact**

- Seal between process connection and housing: EPDM
- Temperature spacer: 316L (1.4435) or 318L for plated high-temperature version
- Pressure-tight feedthrough: 316L (1.4435)
- Grounding at housing (outside): 304 (1.4301)
- Polyester housing F16: PBT-FR with PBT-FR cover or with PA12 transparent cover
  - Cover seal: EPDM
  - Nameplate glued: polyester film (PET)
  - Pressure compensation filter: PBT-GF20
- Stainless steel housing F15: 316L (1.4404)
  - Cover seal: silicone/PTFE
  - Safety claw: 304 (1.4301)
  - Pressure compensation filter: PBT-GF20, PA
  - Nameplate labeling: directly on housing
- Aluminum housing F17/F13: EN-AC-AlSi10Mg, plastic-coated
  - Cover seal: EPDM
  - Safety claw: nickel-plated brass
  - Pressure compensation filter: silicone
  - Nameplate at housing (outside): 304 (1.4301)
- Stainless steel housing F27: 316L
  - Cover seal: FVMQ (optional: EPDM seal available as spare part)
  - Safety claw: 316L
  - Nameplate at housing (outside): 304 (1.4301)
- Aluminum housing T13: EN-AC-AlSi10Mg, plastic-coated,
  - Cover seal: EPDM
  - Safety claw: nickel-plated brass
  - Nameplate at housing (outside): 304 (1.4301)
- Cable gland versions:
  - Polyamide (PA)
  - Nickel-plated brass
  - 316L (1.4435)
  - M12 connector (nickel-plated brass)

## Operability

### Electronic insert

A0018032

Number	Description	Function
1	LED green, operation	Initialization (lit), Normal operation (flashing), Error (off)
2	Density $\rho_{\text{low}}$ (rotary switch)	Setting for the lower limit of the density range
3	LED red, error	Sensor error (lit constantly), Operating error and electronic insert error (flashing)
4	Button	To confirm configuration changes and to activate the proof test
5	LED yellow, current output	MAX (exposed) lit (13.5 mA), MIN (covered) lit (18.5 mA)
6	Density $\rho_{\text{high}}$ (rotary switch)	Setting for the upper limit of the density range
7	MIN	White background indicates configurable density range in the MIN operating mode
8	MAX	Black background indicates configurable density range in the MAX operating mode

### Operating concept

- Onsite configuration
- MIN or MAX safety set via connection wiring
- Density range set via two rotary switches, confirmation via button

## Certificates and approvals

<b>CE mark, Declaration of Conformity</b>	The devices are designed to meet state-of-the-art safety requirements, have been tested, and left the factory in a condition in which they are safe to operate. The devices comply with the applicable standards and regulations that are listed in the EC Declaration of Conformity and thus meet the legal requirements of the EC Directives. Endress+Hauser confirms the conformity of the device by affixing to it the CE mark.

### Other certificates

#### Material certificates

- EN 10204 - 3.1 material (wetted metal parts) inspection certificate
- EN 10204 - 3.1 material, NACE MR0175/MR103 (wetted metal parts) inspection certificate

#### WHG

- Overfill detection system: Z-65.11-507
- Leak detection system: Z-65.40-508

#### Marine approval

GL, ABS marine approval

**Liquefied gas approval**

VdTÜV100

**PWIS free**

PWIS = paint-wetting impairment substances, max. 2000 mm (80 in)

**TSE Certificate of Suitability**

The following applies for device components in contact with the process:

- They do not contain any materials derived from animals.
- No additives or operating materials derived from animals are used in production or processing.

Note!

Wetted device components are listed in the "Mechanical construction" chapters.

**Tests and Certificates**

- 3.1 Material certificate, wetted metallic parts, EN10204-3.1 inspection certificate
- Declaration of conformity NACE MR0175, wetted metallic parts
- Declaration of conformity NACE MR0103, auf Anfr. wetted metallic parts
- Helium leak test, internal procedure, inspection certificate
- Pressure test, internal procedure, inspection certificate
- 3.1 Material certificate + PMI test (XRF), internal procedure, wetted metallic parts, EN10204-3.1 inspection certificate
- Liquid penetrant test AD2000-HPS-3(PT), wetted/pressure retaining metallic parts, inspection certificate
- Liquid penetrant test ISO23277-1 (PT), wetted/pressure retaining metallic parts, inspection certificate
- Liquid penetrant test ASME VIII-1 (PT), wetted/pressure retaining metallic parts, inspection certificate
- Welding documentation, wetted/pressure retaining seams
- Special version, TSP-no. to be specified

**CRN approval**

Versions with a CRN approval (Canadian Registration Number) are listed in the corresponding registration documents.

CRN registration number: OF10904.5CADD2

CRN-approved devices are assigned the registration number.

**Process seal according to  
ANSI/ISA 12.27.01**

Practice in North America for the installation of process seals

Endress+Hauser devices are designed as either single seal or dual seal devices with an alarm in accordance with ANSI/ISA 12.27.01. This means that the user does not need to install an external secondary process seal in the thermowell which is required in ANSI/NFPA 70 (NEC) and CSA 22.1 (CEC). These devices comply with installation practice in North America and enable very safe, low-cost installation in pressurized applications with hazardous media.

Further information is provided in the Safety Instructions (XA) for the specific device → 29 ff.

<b>Product</b>	<b>Type</b>	<b>Max. process pressure</b>	<b>Marking</b>	<b>Approval</b>
Liquiphant FailSafe	FTL80-CB/CC/CD#... FTL80-FB/FC/FD#... FTL81-CB/CC/CD#... FTL81-FB/FC/FD/FE#... FTL85-CB/CC/CD#... FTL85-FB/FC/FD/FE#...	100 bar (1450 psi)  100 bar (1450 psi)  40 bar (580 psi)	Single Seal*  Single Seal*  Single Seal*	CSA FM CSA FM CSA FM

\* Dual seal device with alarm: in conjunction with the high-temperature version 230/280 °C (445/536 °F) or pressure-tight feedthrough (second line of defense).

## Ordering information

Detailed ordering information is available:

- In the product configurator on the Endress+Hauser Internet site: [www.endress.com](http://www.endress.com) ⓘ Select country  
→ Instruments → Select instrument → Advanced functions: product configuration
- From your Endress+Hauser sales center: [www.endress.com/worldwide](http://www.endress.com/worldwide)

Note! Product configurator – the tool for individual product configuration

- Up-to-date configuration data
- Direct entry of data specific to the measuring point, such as the measuring range or operating language, depending on the device
- Exclusion criteria automatically checked
- Automatic order code generation with code breakdown output in PDF or Excel format
- Possible to order directly in the Endress+Hauser online shop

## Accessories

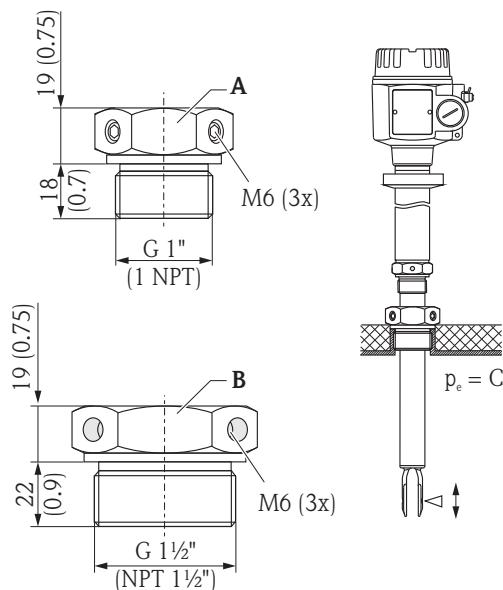

### Sliding sleeves for unpressurized operation

For continuous adjustment of the switch point of a Liquiphant FailSafe FTL81.

Material: corrosion-resistant steel 1.4435 (AISI 316 L)

Weight for G 1, NPT 1: 0.21 kg (0.46 lbs)  
Weight for G 1½, NPT 1½: 0.54 kg (1.2 lbs)

A: SW41  
B: SW55  
C: 0 bar

Thread	Standard	Material	Order number	Approval
G 1	DIN ISO 228/I	1.4435 (AISI 316 L)	52003978	
G 1	DIN ISO 228/I	1.4435 (AISI 316 L)	52011888	3.1 inspection certificate EN 10204 - 3.1 material
