

LEVEL CONTROLLERS

Controls liquid level automatically. Overfill alarm included.

The LC-2 Level Controller will control the liquid level in a tank by activating a solenoid valve or pump to automatically maintain the liquid level in a tank. A third float provides a built-in emergency alarm for over or under filling. Pump up or pump down.

Very easy to install, just bolt to the rim of a tank. Alternatively, there are screw-in mounting options available. (pictured)

Once mounted, adjusting the level is done by loosening the thumbscrews and sliding the pipes to the desired depth. Then, simply plug in your device to the back side of the piggyback plug, or dangling plug, and that's all there is to it. No tools needed.

- Designed for corrosive and wet environments.
- No hard wiring needed.
- Very loud warbling buzzer will be heard over loud factory noise.
- 15A load.
- Waterproof enclosure.
- Circuit board logic can be changed in the field. For example, switch from tank-filling to tank-emptying.
- Float guards protect floats from damage, and can be removed for inspection of floats.
- Tank mount style (pictured) or wall-mount electronics enclosure style (LC-3).
- Polypropylene, PVDF, or stainless steel.

MODEL LC-2
